October 2014

प्राक्कथन

राष्ट्रीय प्रतिदर्श सर्वेक्षण कार्यालय (एनएसएसओ) के घरेलू उपभोक्ता व्यय संबंधी सर्वेक्षण राष्ट्रीय तथा राज्य स्तर पर जनसंख्या के अलग-अलग वर्गों के जीवन-स्तर के विभिन्न संकेतकों के बारे में आंकड़ों के बुनियादी स्रोत होते हैं। इन आंकड़ों का उपयोग योजना बनाने, नीति निर्माण के लिए किया जाता है। ये आंकड़े निर्णय लेने में भी मददगार साबित होते हैं तथा विभिन्न सरकारी संगठनों, शिक्षाविदों, शोधकर्ताओं और विद्वानों द्वारा इनका उपयोग विभिन्न सांख्यिकीय प्रक्रियाओं में इनपुट के रूप में किया जाता है। परिवारों की बड़ी संख्या के प्रतिदर्श के साथ परिवार उपभोक्ता व्यय संबंधी एनएसएस सर्वेक्षण, 27वें दौर (अक्टूबर 1972-सितम्बर 1973) से पंचवार्षिक आधार पर आयोजित किए जा रहे हैं। जुलाई 2011-जून 2012 के दौरान किया गया एनएसएस का 68वें दौर का सर्वेक्षण, इस श्रृंखला का नौवां पंचवार्षिक सर्वेक्षण है जिसमें (i) परिवार उपभोक्ता व्यय तथा (ii) रोजगार एवं बेरोजगारी विषयों को सम्मिलित किया गया है।

2. केन्द्रीय प्रतिदर्श पर आधारित उपभोक्ता व्यय संबंधी इस सर्वेक्षण के परिणाम को एनएसएसओ द्वारा अनेक रिपोर्टों के रूप में प्रकाशित किए जा रहा है। *भारत में परिवार उपभोक्ता व्यय के मुख्य संकेतक, 2011-2012 तथा इस सर्वेक्षण के इकाई स्तर के आंकड़े* जून, 2013 में जारी कर दिए गए थे। इसके अतिरिक्त, एनएसएस के 68वें दौर के आंकड़ों के आधार पर परिवार उपभोक्ता व्यय के विभिन्न पहलुओं पर छह विस्तृत रिपोर्टें जारी करने की योजना बनाई गई है। छह रिपोर्टों की श्रृंखला में पहली तथा दूसरी रिपोर्ट अर्थात् *उपभोक्ता व्यय का स्तर एवं पैटर्न 2011-2012* तथा *भारत में विविध वस्तुओं एवं सेवाओं का घरेलू उपभोग, 2011-2012* पहले ही जारी की जा चुकी हैं। इस श्रृंखला में तीसरी यानी वर्तमान रिपोर्ट भारतीय आबादी द्वारा ग्रहण किए जाने वाले पोषाहारों से संबंधित जानकारी देती है। भोजन में कैलोरी, प्रोटीन और वसा ग्रहण करने के बारे में इस रिपोर्ट में चर्चा की गई है। इस रिपोर्ट में विभिन्न मासिक प्रति व्यक्ति व्यय वर्गों में खाने की विभिन्न वस्तुओं में इन पोषक तत्वों के अंतर्ग्रहण के बारे में जानकारी दी गई है। इस रिपोर्ट में यह सूचना भी दी गई है कि भोजन घर पर किया गया अथवा नहीं, और यदि नहीं, तो क्या भोजन स्कूल, बालवाड़ी, नियोक्ता से प्राप्त हुआ अथवा घर से दूर होने पर खरीदकर ग्रहण किया गया। रिपोर्ट में राष्ट्रीय तथा राज्य/संघ राज्यक्षेत्र स्तर पर ग्रामीण तथा नगरीय क्षेत्रों के लिए अलग-अलग अनुमान प्रस्तुत किए गए हैं। इस रिपोर्ट में छह अध्याय और चार परिशिष्ट हैं। अनुमानों से संबंधित मुख्य निष्कर्ष रिपोर्ट के तीसरे से पांचवें अध्याय में प्रस्तुत किए गए हैं। रिपोर्ट के बहुत वृहत होने के कारण परिशिष्ट तालिकाएं रिपोर्ट के साथ संलग्न सीडी में दी गई हैं।

3. कार्यकारी समूह के सदस्यों के मार्गदर्शन में एनएसएसओ के सर्वेक्षण अभिकल्प तथा अनुसंधान प्रभाग (एसडीआरडी) ने सर्वेक्षण पद्धति, सर्वेक्षण साधन विकसित करने तथा रिपोर्ट तैयार करने का कार्य किया। एनएसएसओ के क्षेत्र संकार्य प्रभाग (एफओडी) ने फील्ड कार्य किया जबकि आंकड़ा विधायन तथा सारणीयन का कार्य समंक विधायन प्रभाग (डीपीडी) ने किया। समन्वय एवं प्रकाशन प्रभाग (सीपीडी) ने सर्वेक्षण संबंधी विभिन्न कार्यकलापों में समन्वयन का कार्य किया।

4. में प्रश्नावली की रूप रेखा से लेकर रिपोर्ट को तैयार करने तक, सर्वेक्षण क्रियाकलापों के विभिन्न चरणों में अपना बहुमूल्य मार्गदर्शन प्रदान करने हेतु राष्ट्रीय सांख्यिकीय आयोग (एनएससी) और राष्ट्रीय प्रतिदर्श सर्वेक्षण के 68वें दौर के कार्य दल के सभी सदस्यों का अत्यंत आभारी हूँ। मैं इस रिपोर्ट को तैयार करने में शामिल एनएसएसओ के विभिन्न प्रभागों के अधिकारियों द्वारा किये गये प्रयासों की भी सराहना करता हूँ।

5. मैं आशा करता हूँ कि यह रिपोर्ट योजनाकारों, नीति-निर्माताओं और शोधकर्ताओं के लिए उपयोगी सिद्ध होगी। इस रिपोर्ट में सुधार के लिये सुझावों का स्वागत है।

(ए.के. मेहरा)

महानिदेशक और मुख्य कार्यकारी अधिकारी
राष्ट्रीय प्रतिदर्श सर्वेक्षण कार्यालय

Preface

The Household Consumer Expenditure Surveys of National Sample Survey Office(NSSO) are the primary source of data on various indicators of level of living of different segments of the population at National and State levels. They are used for planning, policy formulation, support in decision making and as input for further statistical exercises by various Government organizations, academicians, researchers and scholars. NSS surveys on Household Consumer Expenditure with a large sample of households have been conducted quinquennially from the 27th round (October 1972 – September 1973) of NSS onwards. The 68th round survey, carried out during July 2011 to June 2012 was the ninth quinquennial survey in the series, covering (i) Household Consumer Expenditure and (ii) Employment and Unemployment.

2. Based on the Central sample, the results of this survey on Consumer Expenditure are being brought out by NSSO in a number of reports. *Key Indicators of Household Consumer Expenditure in India, 2011-12* and unit level data therein were released in June 2013. Apart from this, six detailed reports are planned to be released on varied aspects of household consumer expenditure based on the NSS 68th round data. The first and second reports in the series of six reports, viz. '*Level and Pattern of Consumer Expenditure 2011-12*' and '*Household Consumption of Various Goods and Services in India, 2011-12*', have already been released. The present report, the third in the series, presents the information on nutritional intake by the Indian population. Intakes of calorie, protein and fat are discussed in this report. The report gives an idea about intake of these nutrients in different monthly per capita expenditure classes from different items of food. The report also presents information on whether meals were taken at home or not, and if not, whether the meals were taken from school, balwadi, employer or consumed by purchasing while away from home. Estimates are presented at National and State/ UT level, separately for rural and urban sectors. This report contains six Chapters and four Appendices. The main findings relating to the estimates given in this report are presented in Chapters Three to Five. Since the report is voluminous, the Appendix Tables are given in a CD along with the report.

3. The Survey Design and Research Division (SDRD) of the NSSO undertook the development of the survey methodology, survey instruments and drafting of the report under the guidance of the members of Working Group. The field work was carried out by the Field Operations Division (FOD) of the NSSO and the data processing and tabulation work by the Data Processing Division (DPD) of the NSSO. The Coordination and Publication Division (CPD) coordinated various activities pertaining to the survey.

4. I would like to convey my sincere thanks to all the members of National Statistical Commission and the working Group for NSS 68th round, for their valuable inputs and guidance at various stages of survey activities from designing of the questionnaire to the preparation of this report. I also express my thanks to various officers of different Divisions of the NSSO involved in the preparation of this report.

5. I hope the report will be found useful by policy makers, academicians and researchers. Suggestions for improvement of the report will be highly appreciated.

(A.K. Mehra)

Director General & Chief Executive Officer
National Sample Survey Office

December, 2014

मुख्य बातें

यह रिपोर्ट 2011-12 के दौरान पूरे देश में फैले हुए 5268 नगरीय खंडों एवं 7469 ग्रामों से एकत्र किये गये सूचनाओं पर आधारित है। उपभोग(खपत) पर सूचना एकत्र करने के लिए दो भिन्न अनुसूचियों को प्रयोग में लाया गया, पहले में 101662 परिवारों से और दूसरे में 101651 परिवारों से सूचना संग्रह किया गया।

आहार उर्जा अर्न्तग्रहण (अनुसूची टाइप-2 पर आधारित)

● प्रति व्यक्ति प्रतिदिन औसत आहार उर्जा अर्न्तग्रहण ग्रामीण भारत के लिए 2233 कि. कैलोरी एवं नगरीय भारत के लिए 2206 कि. कैलोरी था। सभी मुख्य राज्यों के ग्रामीण/नगरीय क्षेत्र में प्रतिव्यक्ति कैलोरी अर्न्तग्रहण का स्तर जो कि अखिल-भारत ग्रामीण/नगरीय औसत 11% के अन्दर (अधिक या कम) था।

● प्रत्येक क्षेत्र में औसत कैलोरी ग्रहण स्थायी तौर पर मासिक प्रतिव्यक्ति उपभोक्ता व्यय (मा.प्र.उ.व्यय) के साथ बढ़ता गया। सबसे कम श्रेणी (मा.प्र.उ.व्यय स्तर द्वारा निर्धनतम जनसंख्या का 5% चिन्हित) एवं अगली आंशिक भिन्न श्रेणी (अगला 5%) ग्रामीण भारत में प्रतिव्यक्ति कैलोरी ग्रहण प्रतिदिन 183 कि. कैलोरी के लगभग उच्च था।

● अखिल-भारतीय स्तर पर करीब 59.5% ग्रामीण जनसंख्या का उर्जा अर्न्तग्रहण 80-120% 2700 कि. कैलोरी /उपभोक्ता इकाई/दिन (रा.प्र.स सारणी में तुलना के लिए व्यवहार किया गया स्तर), जो कि, 2160-3240 कि. कैलोरी/उपभोक्ता इकाई के बराबर थी।

● अखिल - भारतीय नगरीय कैलोरी अर्न्तग्रहण वितरण ग्रामीण के समान था, जहां उच्च एवं निचली श्रेणियों में कुछ अधिक परिवारों की संख्या थी। उर्जा अर्न्तग्रहण वितरण में अन्तरविभागीय राज्यों की विभिन्नता, खास तौर पर निचले हिस्से में, ग्रामीण क्षेत्र के मुकाबले भारत के नगरीय क्षेत्र में काफी कम महत्वपूर्ण थे।

● मा.प्र.उ. व्यय द्वारा चिन्हित निचली 5% ग्रामीण जनसंख्या के बीच, 57% परिवारों का कैलोरी अर्न्तग्रहण 2160 कि. कैलोरी/उपभोक्ता इकाई/दिवस से कम था, अगले 5% के लिए यह अनुपात 39% तक गिरा एवं ऐसे लगातार क्रम में निरन्तर चलता रहा जब तक कि यह ऊपरी 5% जनसंख्या के लिए 2% तक केवल गिरा।

● इसी तरह नगरीय परिवारों का अनुपात जिनका कैलोरी अर्न्तग्रहण 2160 कि. कैलोरी/उपभोक्ता इकाई/दिवस निचली 5% जनसंख्या के लिए 59% था, अगली 5% जनसंख्या के लिए 47% तक गिरा एवं ऊपरी 5% जनसंख्या के लिए 1.6% तक पहुँचा।

● उर्जा अर्न्तग्रहण की शक्ति का भाग जो अनाजों की देन थी, ग्रामीण भारत के लिए करीब 57% एवं नगरीय भारत के लिए 48% थी। मुख्य राज्यों में अनाजों की देन की विभिन्नता 42% (पंजाब) से 70% (ओड़ीसा) तक ग्रामीण क्षेत्र में एवं 39% (हरियाणा) से 60% (ओड़ीसा एवं बिहार) नगरीय क्षेत्र में पायी गयी।

- मा.प्र.उ. व्यय स्तर की बढ़ोत्तरी में, कैलोरी ग्रहण में अनाजों की देन में प्रगतिशील रूप से गिरावट आई, ग्रामीण भारत में मा.प्र.उ. व्यय द्वारा चिन्हित निचिली 5% जनसंख्या 70% से 42%, एवं नगरीय भारत में 66% से 29% ।
- ग्रामीण भारत में करीब 43% कैलोरी अर्न्तग्रहण अनाजेतर खाद्य ने दिया । इस भाग के कैलोरी ग्रहण का प्रतिशत (वह भाग जो गैर-खाद्य अनाज) से आता था ऐसे था : तेल एवं वसा : 22%; विविध खाद्य उत्पाद एवं पेय पदार्थ : 21%; दूध एवं दूध उत्पादन : 15%; दालें, दृढ़पत एवं तेलहन : 12%; चीनी एवं मधु : 11%; जड़ मूल एवं कंद : 9%; सब्जियां एवं फल : 7%; मांस, अंडे एवं मछली : 3%
- गैर - अनाज खाद्य ने नगरीय भारत में अपना कलोरी अर्न्तग्रहण का करीब 52% दिया । पूर्ण रूप से, इस कैलोरी अर्न्तग्रहण का पैटर्न गैर-खाद्य अनाज से एक तरह से दोनों नगरीय एवं ग्रामीण क्षेत्रों में समान था, जबकि रूट (मूल) एवं कंद का भाग, 7%, जो थोड़ा कम था ।
- गैर -अनाजों द्वारा दी गयी कैलोरी अर्न्तग्रहण में, “दूध एवं दूध उत्पादों” का भाग सभी मुख्य राज्यों के नगरीय क्षेत्र में 8% से 27% तक था, जिसका रेंज ग्रामीण क्षेत्र में 3% से 36% तक थी, जो कि 4 मुख्य राज्यों में 7% या उससे कम थी ।
- “चीनी एवं मधु” का कैलोरी अर्न्तग्रहण गैर खाद्य अनाज में सामान्य रूप से उन राज्यों में जहां अधिक औसतन रहने के स्तर हैं कुछ अधिक देन थी ।

प्रोटीन एवं वसा का अर्न्तग्रहण (अनुसूची टाइप-2 पर आधारित)

- अखिल - भारतीय सतर पर प्रति व्यक्ति दैनिक प्रोटीन अर्न्तग्रहण ग्रामीण क्षेत्र में 60.7 ग्राम एवं नगरीय क्षेत्र में 60.3 ग्राम था ।
- प्रधान राज्यों में अर्न्तराज्य वैभिन्न्य ग्रामीण क्षेत्र में सराहनीय तौर पर अधिक थी, जहां प्रति दिन प्रति व्यक्ति की खपत में करीब 52 ग्राम (छत्तीसगढ़) से 73 ग्राम (हरियाणा) की विभिन्नता थी, एवं नगरीय क्षेत्र में 55 ग्राम(असम) से करीब 69 ग्राम(हरियाणा) थी ।
- कुछ गरीब राज्यों में, नगरीय क्षेत्र के मुकाबले प्रोटीन अर्न्तग्रहण ग्रामीण क्षेत्र में कुछ कम चिन्हित की गयी : जैसे झाड़खण्ड (ग्रामीण : 54.7 ग्राम, नगरीय : 60.3 ग्राम) एवं छत्तीसगढ़ (ग्रामीण : 51.7 ग्राम, नगरीय : 55.8 ग्राम) । दूसरी तरफ, उन राज्यों में जहां प्रोटीन की खपत अपने उच्चतर स्तर पर थी, जैसे, हरियाणा, राजस्थान एवं पंजाब, वह ग्रामीण जनसंख्या थी नाकि कि नगरीय जिनका उच्चतर प्रोटीन खपत था (करीब 4-5 ग्राम ज्यादा ।)
- प्रति व्यक्ति का दैनिक औसत प्रोटीन अर्न्तग्रहण मा.प्र.उ.व्यय के स्तर के साथ ग्रामीण भारत में अविरत रूप से बढ़ता हुआ दिखाई दिया- जनसंख्या के निचले 5% का 43 ग्राम जो कि मा.प्र.उ.व्यय से मापा गया 91 ग्राम उच्च 5% के लिए एवं नगरीय भारत में निचली 5% के लिए 44 ग्राम एवं उच्च 5% के लिए 87 ग्राम ।

- नगरीय भारत के लिए प्रोटीन अर्न्तग्रहण में अनाजों का भाग 49% एवं ग्रामीण भारत के लिए 58% था ।
- प्रोटीन अर्न्तग्रहण में दूध एवं दूध के उत्पादों का भाग ग्रामीण भारत में 10% एवं नगरीय भारत में 12% था । यह हरियाणा में सबसे अधिक था (ग्रामीण : 27%; नगरीय : 22%) एवं पंजाब (नगरीय एवं ग्रामीण : 23%), एवं राजस्थान तथा गुजरात में 14% से 18% के बीच था । 17 मुख्य राज्यों के बीच, यह चार राज्य एवं उत्तर प्रदेश (ग्रामीण : 11%; नगरीय : 13%), यह केवल वह पांच राज्य थे जहां राष्ट्रीय औसत के मुकाबले दूध एवं दूध के उत्पादनों की देन प्रोटीन अर्न्तग्रहण में सबसे अधिक थी ।
- प्रोटीन अर्न्तग्रहण में मांस, मछली एवं अंडों का भाग ग्रामीण भारत में केवल 7% था एवं नगरीय भारत में 9% था । दोनों ग्रामीण एवं नगरीय केरल में यह भाग 26% था, एवं 5 अन्य प्रमुख राज्यों : पश्चिम बंगाल, आसाम, आंध्र प्रदेश, तामिलनाडू एवं कर्नाटका में यह केवल 10% या उससे अधिक था ।
- प्रोटीन अर्न्तग्रहण में अनाजों की देन में तेजी से गिरावट आई, मा.प्र.उ. व्यय में 72% निचली 5% जनसंख्या के लिए एवं ऊपरी 5% जनसंख्या के लिए 42% एवं 68% से 31% नगरीय भारत में । दूसरी तरफ, दूध एवं उसके उत्पादों की देन प्रोटीन अर्न्तग्रहण ग्रामीण भारत में निचली आंशिक भिन्न श्रेणी के लिए 3% एवं अधिकतम 16% एवं नगरीय क्षेत्र में 4% से 7% । अंडे, मछली एवं मांस की देन प्रोटीन अर्न्तग्रहण में, मा.प्र.उ. व्यय श्रेणियों के बीच स्पष्टतः ग्रामीण भारत में 2% से 12% एवं नगरीय भारत में 4% से 11% तक उपर गया ।
- देश के लिए औसतन वसा अर्न्तग्रहण पूर्ण रूप से ग्रामीण क्षेत्र में प्रति दिन प्रति व्यक्ति करीब 46 ग्राम था एवं नगरीय क्षेत्र में 58 ग्राम था । खासकर ग्रामीण भारत में अर्न्तराज्य परिवर्तन; तौभी विचारणीय है । दोनों क्षेत्रों में, प्रति व्यक्ति अर्न्तग्रहण ओड़ीसा एवं आसाम में सबसे कम था वे राज्य जिनका सबसे अधिक वसा अर्न्तग्रहण था, हरियाणा (ग्रामीण : 69 ग्राम; नगरीय : 75 ग्राम), गुजरात (ग्रामीण : 62 ग्राम; नगरीय : 73 ग्राम), तथा पंजाब (ग्रामीण : 70 ग्राम; नगरीय : 69 ग्राम)
- प्रति व्यक्ति प्रति दिन नगरीय वसा अर्न्तग्रहण ग्रामीण अर्न्तग्रहण बढ़ा, 9 ग्राम या उससे अधिक नौ प्रमुख राज्यों में बढ़ा, एवं पश्चिम बंगाल एवं झाड़खंड में 13 ग्राम तक बढ़ा । ग्रामीण अर्न्तग्रहण नगरीय से केवल एक प्रमुख राज्य पंजाब में बढ़ा ।
- प्रति व्यक्ति वसा अर्न्तग्रहण नगरीय क्षेत्र में उच्च आंशिक भिन्न श्रेणी में 100 ग्राम तक था एवं निचली आंशिक भिन्न श्रेणी में करीब 27 ग्राम था । ग्रामीण क्षेत्र में उच्च आंशिक भिन्न श्रेणी के लिए यह 92 ग्राम एवं निचली आंशिक भिन्न श्रेणी के लिए 21 ग्राम था ।
- अखिल भारतीय स्तर पर, नगरीय ग्रामीण विभाजन पर औसतन प्रोटीन अर्न्तग्रहण के उल्लेखनीय समीपता के मुकाबले, औसतन नगरीय वसा अर्न्तग्रहण सभी आंशिक भिन्न क्षणियों में ग्रामीण ग्रहण के मुकाबले काफी अधिक था ।

अर्न्तग्रहण में परिवर्तन (अनुसूची टाइप-1 पर आधारित)

● 1983 से 2011-12 के बीच रा.प्र.स. के सर्वेक्षणों के आकड़ों की तुलना करने पर मालूम हुआ कि 1999-2000 के बाद दोनों क्षेत्रों में भारत एवं प्रमुख राज्यों में कैलोरी अर्न्तग्रहण में गिरावट आई, यह गिरावट नगरीय क्षेत्र में अधिक प्रबल थी परन्तु ग्रामीण क्षेत्रों में प्रति दिन प्रति व्यक्ति का 2100 कि. कैलोरी एवं 2011-2012 में नगरीय क्षेत्रों में 2060 कि. कैलोरी का स्तर पुनः प्राप्त हुआ, व्यक्तिगत राज्यों के स्तर पर, मुख्य राज्यों के ग्रामीण क्षेत्रों में 2004-05 एवं 2011-12 के बीच नोट किया गया कि औसत कैलोरी अर्न्तग्रहण स्तर में बढ़ोत्तरी हुई ।

● 2160 कि. कैलोरी के अन्तर्गत प्रति उपभोगता इकाई का प्रति दिन की परिवारों का अनुपात 1993-94 एवं 2004-05 के बीच जो दोनों क्षेत्रों में बढ़ा, उसमें तदन्तर रूप से सराहनीय तौर पर ग्रामीण क्षेत्र में 20% से एवं नगरीय क्षेत्र में 23% से गिरावट नजर आई । पूर्णरूप से 1990 से आहार शक्ति ग्रहण के वितरण के छितराव में कमी पायी गयी ।

● 1993-94 से 2011-12 के 18 वर्ष की अवधि के बीच, पूर्ण कैलोरी ग्रहण में अनाजों के भाग में ग्रामीण क्षेत्र में 10 प्रतिशत बिन्दुओं एवं नगरीय क्षेत्र में 7 प्रतिशत बिन्दुओं से गिरावट आई । दूसरी तरफ, दोनों क्षेत्रों में तेल एवं वसा का भाग 3½% बिन्दुओं से बढ़ा ।

● ग्रामीण भारत में पूर्ण रूप में, 1993-94 से प्रोटीन अर्न्तग्रहण प्रति व्यक्ति प्रतिदिन आवश्यक रूप से गिरा । फिर भी, अखिल भारतीय स्तर पर यह गिरावट 2004-05 के मुकाबले, 2011-12 में चौरस रूप (सीधा) के चिन्ह दर्शाती है जो कि केवल 0.5 ग्राम कम था । ग्रामीण प्रोटीन ग्रहण की गिरावट 1993-94 से राजस्थान में प्रमुख रही (11 ग्राम की गिरावट), हरियाणा (करीब 10 ग्राम), एवं पंजाब (8 ग्राम) । नगरीय क्षेत्र में, 1993-94 एवं 2011-12 के बीच यह गिरावट ग्रामीण के मुकाबले कम चिन्हित की गयी । दोनों क्षेत्रों में, इस अवधि के दौरान सभी दक्षिणी राज्य सिवाय कर्नाटका के, प्रति व्यक्ति के प्रोटीन अर्न्तग्रहण में कुछ अधिक मात्रा की बढ़ोत्तरी दर्शाते हैं ।

● केवल अखिल-भारतीय स्तर पर ही नहीं परन्तु प्रत्येक प्रमुख राज्य में एक बिना गलती वाली चढ़ता हुआ प्रवृत्ति प्रत्येक व्यक्ति के वसा अर्न्तग्रहण में दृष्टिगोचर हुआ । ग्रामीण भारत के लिए यह बढ़ोत्तरी प्रतिदिन 31.4 ग्राम की 1993-94 से 41.6 ग्राम की 2011-12 तक थी एवं नगरीय भारत के लिए, 42.0 ग्राम से 52.5 ग्राम के लिए 18 वर्ष की अवधि में दोनों क्षेत्रों में 10 ग्राम से अधिक की बढ़ोत्तरी नजर आई । दोनों क्षेत्रों में इस अवधि के दौरान सभी मुख्य राज्य एक ऐसी बढ़ोत्तरी दर्शाते हैं जिनकी विविधता 5-6 ग्राम से लेकर 17-18 ग्राम तक की थी ।

● इन 18 वर्षों तक 2011-12 के आगे प्रोटीन अर्न्तग्रहण में अनाजों की देन में ग्रामीण भारत में का प्रतिशत 7 बिन्दुओं से गिरावट आई एवं नगरीय भारत में 6 प्रतिशत बिन्दुओं से जबकि सभी अन्य मुख्य खाद्य समूहों के भाग कम तौर पर हो बड़े ।

Highlights

The report is based on information collected during 2011-12 from 7469 villages and 5268 urban blocks spread over the entire country. Two different schedules were used to collect information on consumption, the first being canvassed in 101662 households and the second in 101651 households.

INTAKE OF DIETARY ENERGY (based on Sch. Type 2)

- Average dietary energy intake per person per day was 2233 Kcal for rural India and 2206 Kcal for urban India. All the major States had per capita rural/urban levels of calorie intake within 11% (plus or minus) of the all-India rural/urban average.
- In each sector average calorie intake increased steadily with monthly per capita expenditure (MPCE) class. The difference between the lowest fractile class (poorest 5% of population ranked by MPCE level) and the next fractile class (the next 5%) in per capita calorie intake was as high as 183 Kcal per day in rural India.
- About 59.5% of the all-India rural population had energy intake in the range 80-120% of 2700 Kcal/consumer unit/day (a level used in NSS tabulation for comparisons), that is, 2160-3240 Kcal/consumer unit/day.
- The all-India urban calorie intake distribution was similar to the rural, with slightly higher numbers of households in the top and bottom intake classes. Inter-State differences in energy intake distributions, especially at the lower end, were much less prominent in the urban sector of India than in the rural.
- Among the bottom 5% of rural population ranked by MPCE, 57% of households had calorie intake below 2160 Kcal/consumer unit/day, the proportion falling to 39% for the next 5%, and continuing to fall until it dropped to only about 2% for the top 5% of population.
- Similarly, the proportion of urban households with calorie intake below 2160 Kcal/consumer unit/day was 59% for the bottom 5% of population, falling to 47% for the next 5%, and reaching 1.6% for the top 5% of population.
- The share of energy intake contributed by cereals was about 57% for rural India and 48% for urban India. The contribution of cereals varied across the major States from 42% (Punjab) to 70% (Odisha) in the rural sector and from 39% (Haryana) to 60% (Odisha and Bihar) in the urban sector.
- The contribution of cereals to calorie intake was seen to fall progressively with rise in MPCE level, from 70% for the bottom 5% of population to 42% for the top 5% ranked by MPCE in rural India, and from about 66% to about 29% in urban India.
- Non-cereal food contributed about 43% of calorie intake in rural India. The percentage break-up of this part of calorie intake (the part coming from non-cereal food) was: oils and fats: 22%; miscellaneous food, food products and beverages: 21%; milk and milk

products: 15%; pulses, nuts and oilseeds: 12%; sugar and honey: 11%; roots and tubers: 9%; vegetables and fruits: 7%; meat, eggs & fish: 3%.

- Non-cereal food contributed about 52% of calorie intake in urban India. On the whole, the pattern of calorie intake from non-cereal food was similar in rural and urban areas, though the share of roots and tubers was, at 7%, somewhat lower.

- The share of “milk and milk products” in calorie intake contributed by non-cereals, which was between 8% and 27% in the urban sector of all the major States, ranged from 3% to 36% in the rural sector, being 7% or less in 4 major States.

- “Sugar and honey” usually had a higher contribution to calorie intake from non-cereal food in States with higher average levels of living.

INTAKE OF PROTEIN AND FAT (based on Sch. Type 2)

- At the all-India level protein intake per person per day was 60.7gm in the rural sector and 60.3gm in the urban.

- The range of inter-State variation for major States was appreciably wider in the rural sector, where per capita intake per day varied from about 52gm (Chhattisgarh) to about 73gm (Haryana), than in the urban, where it varied from 55gm (Assam) to about 69gm (Haryana).

- In some of the poorer States, protein intake was markedly lower in the rural sector than in the urban; examples are Jharkhand (rural: 54.7gm, urban: 60.3gm) and Chhattisgarh (rural: 51.7gm, urban: 55.8gm). On the other hand, in the States with the highest levels of protein intake, viz., Haryana, Rajasthan and Punjab, it was the rural population and not the urban that had higher protein intake (about 4-5gm higher).

- Average protein intake per capita per day was seen to rise steadily with MPCE level in rural India from 43gm for the bottom 5% of population ranked by MPCE to 91gm for the top 5%, and in urban India from 44gm for the bottom 5% to about 87gm for the top 5%.

- The share of cereals in protein intake was 58% for rural and 49% for urban India.

- The share of milk and milk products in protein intake was 10% in rural India and 12% in urban India. It was highest in Haryana (rural: 27%; urban: 22%) and Punjab (rural and urban: 23%), and between 14% and 18% in Rajasthan and Gujarat. Among the 17 major States, these 4 States and Uttar Pradesh (rural: 11%; urban: 13%) were the *only* 5 States where the contribution of milk and milk products to protein intake was higher than the national average.

- The share of meat, fish and egg in protein intake was only 7% in rural India and 9% in urban India. The share was 26% in both rural and urban Kerala, and was 10% or more in only 5 other major States: West Bengal, Assam, Andhra Pradesh, Tamil Nadu, and Karnataka.

- The contribution of cereals to protein intake is seen to fall steadily with rise in MPCE from 72% for the bottom 5% of population to 42% for the top 5% in rural India and from 68% to 31% in urban India. On the other hand, the contribution of milk and milk products to protein intake is seen to rise from 3% for the bottom fractile class of population in the rural sector to 16% in the highest, and from 4% to 17% in the urban sector. The contribution of

egg, fish and meat to protein intake, too, climbs quite noticeably across MPCE classes from 2% to 12% in rural India and from 4% to 11% in urban India.

● Average fat intake for the country as a whole was about 46gm per person per day in the rural sector and 58gm in the urban sector. Considerable inter-State variation, however, existed, especially in rural India. In both sectors, per capita intake was lowest in Odisha and Assam. The States with highest fat intake were Haryana (rural: 69gm; urban: 75gm), Gujarat (rural: 62gm; urban: 73gm) and Punjab (rural: 70gm; urban: 69gm).

● Urban fat intake per person per day exceeded rural intake by 9gm or more in nine of the major States and by more than 13gm in West Bengal and Jharkhand. Rural intake exceeded urban in only one major State – Punjab.

● Per capita fat intake was about 100g in the top fractile class of the urban sector and about 27gm in the lowest fractile class. In the rural sector the intake of the top fractile class was 92gm while that of the bottom class was 21gm.

● At all-India level, in contrast to the remarkable closeness of average protein intake across the rural-urban divide, average urban fat intake was noticeably higher than rural intake in all the fractile classes.

TRENDS IN NUTRITIONAL INTAKE (based on Sch. Type 1)

● Comparison of estimates for India and the major States from NSS surveys between 1983 and 2011-12 shows calorie intake declining in both sectors after 1999-2000, the decline being sharper in the urban sector, but recovering again to regain a level of about 2100 Kcal per person per day in the rural sector and about 2060 Kcal in the urban in 2011-12. At the level of individual States, a rise in average calorie intake level between 2004-05 and 2011-12 is noted in rural areas of most of the major States.

● The proportion of households with calorie intake under 2160 Kcal per consumer unit per day, which in both sectors increased over the period 1993-94 to 2004-05, is seen to have subsequently declined appreciably to reach about 20% in the rural sector and 23% in the urban. On the whole, the distribution of dietary energy intake appears to have experienced a reduction in dispersion since the 1990s.

● Over the 18-year period from 1993-94 to 2011-12, the share of cereals in total calorie intake has declined by nearly 10 percentage points in the rural sector and nearly 7 percentage points in the urban. On the other hand, the share of oils and fats has risen by about 3½ percentage points in both sectors.

● In rural India as a whole, protein intake per person per day has definitely declined since 1993-94. However, the decline at the all-India level shows signs of flattening out, being only 0.5gm less in 2011-12 compared to 2004-05. The decline in rural protein intake since 1993-94 has been prominent in Rajasthan (a fall of 11gm), Haryana (about 10gm), and Punjab (8gm). In the urban sector the decline between 1993-94 and 2011-12 is less marked than in the rural. In both sectors, all the southern States except Karnataka show slight increases in protein intake per person during this period.

● An unmistakable rising trend in per capita fat intake is visible not only at all-India level but in every major State. For rural India the rise has been from 31.4gm per day in 1993-94 to 41.6gm in 2011-12 and for urban India, from 42.0gm to 52.5gm— a rise of over 10gm in both sectors over the 18-year period. In both sectors, all the major States show a rise ranging from 5-6gm to 17-18gm during this period.

● Over the 18 years preceding 2011-12, the contribution of cereals to protein intake has fallen by about 7 percentage points in rural India and nearly 6 percentage points in urban India while the shares of the other major food groups have all risen slightly.

Chapter One

Introduction

1.1 Nutritional intake and its measurement from NSS survey data

1.1.1 Unlike plants, which can manufacture the foods they need from simple chemicals derived from the soil, from water and from the carbon dioxide in the air, higher organisms, including man, do not possess this capacity to manufacture food from simple chemicals and depend on plants or other animals for obtaining the food that they need. Man, however, has access to a very wide range of foods to choose from in deciding his diet. While satisfaction of hunger and palatability, subject to purchasing power, and guided by cultural traditions, are the usual factors which determine a person's choice of food, not all human beings are able to meet the dietary requirements for sustaining a healthy and active life. It is necessary, therefore, particularly in populations of developing countries that include a sizeable group who are economically deprived, to constantly monitor the nutritional intake of the people. Household surveys on consumption and consumer expenditure which collect quantitative information on the entire range of foods consumed by a household provide an opportunity to study various aspects of the nutritional intake of the population covered by the survey.

1.1.2 The main consumer expenditure surveys of the National Sample Survey Office (see next section) are conducted quinquennially with the principal objective of obtaining estimates of household monthly per capita consumer expenditure (MPCE), its distribution over households and persons, and its break-up by commodity group, at national and State level. In addition to recording consumer expenditure, the schedule of enquiry used for the survey records quantities of various items of consumption, in particular, of each food item consumed by the household during the reference period. This information on quantities of food consumed by different households enables the measurement of energy, protein and fat consumed by each surveyed household, and the estimation of household per capita intake of each of these nutrients and its distribution over households and persons. The tabulation of data on nutritional intake (though restricted to intake of energy, protein and fat) and its release in the form of a special report on nutrition has become a regular feature of the quinquennial consumer expenditure surveys.¹

1.1.3 The last four NSS reports on nutritional intake in India were those based on NSS's 50th round (1993-94), 55th round (1999-2000), 61st round (2004-05) and 66th round (2009-10) consumer expenditure surveys. The present is based on the 68th round survey (2011-12).

1.2 The survey and its objective

1.2.1 The National Sample Survey Office (NSSO) of the National Statistical Organisation, Government of India, conducts nationwide household consumer expenditure surveys at

¹ It is worth noting, however, that the survey itself is aimed at obtaining data on household consumer expenditure and is not specially designed to serve the needs of a nutrition survey.

regular intervals as part of its “rounds”, each round normally of a year’s duration. These surveys are conducted through interviews of a representative sample of households selected randomly through a scientific design and cover almost the entire geographical area of the country.

1.2.2 The household consumer expenditure survey (CES) is generally conducted as one of the main subjects of the NSS survey at quinquennial intervals. This provides a series of CES’s. The 68th round survey (July 2011 - June 2012) was the ninth such survey of this series. Two reports on household consumption in India during 2011-12 based on this survey have already been released².

1.2.3 The NSS consumer expenditure survey (CES) aims at generating estimates of average household monthly per capita consumer expenditure (MPCE), its distribution over households and persons, and its break-up by commodity group, at national and State/UT level, and for different socio-economic groups. These indicators are amongst the most important measures of the level of living of the respective domains of the population, and are used extensively for the study of poverty and inequality. Other uses of the CES include the use of budget shares as revealed by the NSS CES to prepare the weighting diagram for official compilation of consumer price indices (CPIs), and the measurement of elasticity or responsiveness of demand to change in total expenditure. And (as in this report) the data on quantities of consumption of different food items are used to study the level of nutrition – in terms of energy, protein and fat intake – of population of different regions and disparities therein, and trends in nutritional intake over time.

1.3 Reports of the 68th round CES

1.3.1 The results of NSS rounds are released in reports based on comprehensive tabulation of subject parameters and indicators in various cross-classifications generated from the data. For the NSS 68th round quinquennial survey on household consumer expenditure, the results are planned for release in six reports. The titles of these reports are:

1. Level and Pattern of Consumer Expenditure, 2011-12
2. Household Consumption of Various Goods and Services in India, 2011-12
3. Nutritional Intake in India, 2011-12
4. Energy Sources of Indian Households for Cooking and Lighting, 2011-12
5. Public Distribution System and Other Sources of Household Consumption, 2011-12
6. Household Consumer Expenditure across Socio-Economic Groups, 2011-12

1.4 Contents of this report

1.4.1 The present report is concerned with the levels of calorie, protein and fat intake in India and their variation across States/UTs and with level of living. Both averages and distributions of calorie intake over households and persons are discussed. The contributions

² NSS Report No.555: *Level and Pattern of Consumer Expenditure, 2011-2012*, and NSS Report No.558: *Household Consumption of Various Goods and Services in India, 2011-2012*.

of different food groups to energy and protein intake is also examined. Following the present introductory chapter, Chapter Two explains the concepts, definitions and procedures of data collection and tabulation that are relevant to the study of nutritional intake. Chapter Three presents the salient findings on intake of dietary energy or calorie intake. Chapter Four presents estimates of protein and fat intake. Trends in calorie, protein and fat intake as revealed by the NSS surveys of consumption from 1983 onwards are examined in Chapter Five. Chapter Six discusses the sources from which meals were received apart from meals prepared at home. This is followed by some statements generated from the detailed tables for purposes of ready reference, and other statements showing trends in nutrient intake over the years. Appendix A gives the detailed tables generated from the survey data. Appendix B explains in detail the sample design and estimation procedure followed. Appendix C consists of the schedules of enquiry (Schedule 1.0, Type 1 and Type 2) that were canvassed in the surveyed households.

1.4.2 The detailed State-sectorwise and all-India-sectorwise tables presented in Appendix A of this report relate to 2011-12. They give

- Per capita and per consumer unit calorie, protein and fat intake per day for different fractile classes of MPCE
- Distribution of households and persons by level of household calorie intake per consumer unit per day for different fractile classes of MPCE
- Percentage break-up of calorie intake over different food groups and average intake of calorie, protein and fat per consumer unit per day for households in different ranges of calorie intake per consumer unit per day
- Percentage break-up of total intake of calorie and protein over different food groups for different fractile classes of MPCE
- Break-up of average number of meals consumed per month per household by source of meals, for each fractile class of MPCE, and break-up of average number of meals consumed per month per person by source, for different age groups and sexes

1.4.3 Because the survey used two schedule types with different reference period systems, most of the estimates presented in this report are provided separately for the two schedule types. (See Chapter Two, Section 2.4.)

1.5 Features of the survey: schedules of enquiry

1.5.1 The household consumer expenditure schedule (“Schedule 1.0”) used for the survey collected information on quantity³ and value of household consumption. To minimise recall errors, a very detailed item classification was, as usual, adopted to collect information. The schedule also collected some other particulars of each household member, such as age, sex and educational level.

³ For education, medical care, and some goods and services listed in the schedule as “miscellaneous goods and services”, no data on quantity of consumption are collected in the NSS CES’s.

1.5.2 The schedules of enquiry used were of two types. The two types had the same item break-up but differed in reference periods used for collection of consumption data. Schedule Type 1, as far as reference periods were concerned, was a repeat of the schedule used in most quinquennial rounds. For certain categories of relatively infrequently purchased items, including clothing and consumer durables, it collected information on consumption during the last 30 days and the last 365 days. For other categories, including all food and fuel and consumer services, it used a 30-days reference period. Schedule Type 2 used „last 365 days“ (only) for the infrequently purchased categories, „last 7 days“ for some categories of food items, as well as pan, tobacco and intoxicants, and „last 30 days“ for other food items, fuel, and the rest. This was in line with the recommendations of an Expert Group that had been formed for the purpose of suggesting the most suitable reference period for each item of consumption⁴. The differences (in reference period) between Schedule Types 1 and 2 are shown in Table T1.

Table T1: Reference periods used for collection of consumption data in Schedule 1.0, Type 1 and Type 2

Category	Item groups	Reference period for	
		Schedule Type 1	Schedule Type 2
I	Clothing, bedding, footwear, education, medical (institutional), durable goods	„Last 30 days“ and „Last 365 days“	Last 365 days
II	Edible oil; egg, fish & meat; vegetables, fruits, spices, beverages and processed foods; pan, tobacco & intoxicants	Last 30 days	Last 7 days
III	All other food, fuel and light, miscellaneous goods and services including non-institutional medical; rents and taxes	Last 30 days	Last 30 days

1.5.3 Schedule Type 1 and Schedule Type 2 were canvassed in two independent samples of matching size.

1.6 Features of the survey: scope and coverage

1.6.1 *Geographical coverage:* The survey covered the whole of the Indian Union *except* (i) (ii) interior villages of Nagaland situated beyond five kilometres of the bus route and (iii) villages in Andaman and Nicobar Islands which remain inaccessible throughout the year. *However, although planned, no sample could actually be surveyed in the districts of Leh (Ladakh), Kargil and Poonch of Jammu & Kashmir by NSSO.*

1.6.2 *Population coverage:* The rules of population coverage were as listed below:

1. Floating population, i.e., persons without any normal residence, was excluded. But persons residing in open space, roadside shelter, under a bridge, etc., more or less regularly in the same place were covered.

⁴ See NSS Report no. 475; entitled “Results of a Pilot Survey on Suitability of Different Reference Periods for Measuring Household Consumption”.

2. Foreign nationals were excluded, as well as their domestic servants, if by definition the latter belonged to the foreign national's household (see Chapter Two, paragraph 2.2.1, for definition of household). A foreign national who had become an Indian citizen for all practical purposes was, however, covered.
3. Persons residing in barracks of military and paramilitary forces (like police, BSF etc.) were kept outside the survey coverage. However, the civilian population residing in their neighbourhood, including the family quarters of service personnel, was covered.
4. Orphanages, rescue homes, ashrams and vagrant houses were outside the survey coverage. However, the persons staying in old age homes, the students staying in ashram/hostels and the residential staff (other than monks/nuns) of these ashrams were covered. Although orphans living in orphanages were excluded, the persons looking after them and staying there were covered. Convicted prisoners undergoing sentence were outside the coverage of the survey.

1.6.2 *Sample size*

1.6.2.1 *First-stage units*: As is usual in the regular NSS rounds, most States and Union Territories participated in the survey: a "State sample" was surveyed by State Government officials in addition to the "Central sample" surveyed by NSSO. For rural India, the number of villages surveyed in the Central sample was 7,469 and for urban India the number of urban blocks surveyed was 5,268. This document is based on the estimates obtained from the Central sample only.

1.6.2.2 *Second-stage units*: For the consumer expenditure survey, from each sample village and urban block, two samples of 8 households each were selected for canvassing Schedule Type 1 and Schedule Type 2. The total number of households in which Schedule 1.0 was canvassed was 1,19,378 in rural India and 83,935 in urban India.

1.6.2.3 Table T2 shows the numbers of villages and urban blocks surveyed, and, for each of the two schedule types, the numbers of rural and urban sample households in which the consumer expenditure schedule was canvassed, for each State and Union Territory.

**Table T2: Number of villages/blocks surveyed and number of households surveyed for Schedule 1.0

Chapter Two

Concepts, Definitions and Procedures

2.1 Nutrients and measurement of nutrient intake

2.1.1 **Nutrients:** Man needs a wide range of nutrients to perform various functions of the body and to lead a healthy life. The nutrients include proteins, fat, carbohydrate, vitamins and minerals. These are chemical substances which are present in the food we eat daily. The proportions of different nutrients contained vary from food to food. Some foods are rich in one or more nutrients. Thus there are protein-rich foods, fat-rich foods, foods rich in Vitamin A, and so on. Some foods contain only a single nutrient – sugars are a source of only carbohydrates while oils and ghee provide only fats.

2.1.2 **Energy intake:** A living being has to expend a certain amount of energy even when at rest, to carry out essential functions such as respiration, blood circulation, digestion, etc. Activity involving manual work, light or heavy, requires additional amounts of energy. All this energy has to be supplied through food. The three components of food which provide this energy are carbohydrates, fat and proteins. Proteins normally supply 10-12% of energy in most diets; energy that carbohydrate and fat contribute may vary from diet to diet. Quantitative food requirements are usually set in terms of energy. The unit of measuring energy is kilocalorie (Kcal) which is the amount of heat necessary to raise the temperature of one kg of water by 1°C from 14.5°C to 15.5°C. This is also called 1 Calorie and equals 1000 calories – the calorie being the heat required to raise 1 gm of water through the same temperature. In discussions on nutrition, the word “calorie” is often used interchangeably with the term “energy”, as in “calorie intake”. Also, in reporting quantities of energy intake, the unit Calorie is often used without the capital letter as there is little chance of confusion with the much smaller unit “calorie”.

2.1.3 **Protein:** Proteins are among the most important nutrients required by the body and should be available in adequate amounts in the diet. The protein needed by the body has to be supplied through the diet we consume. All foods except refined sugar, oil and fats contain protein in varying degrees. Some foods contain high amounts of protein and can be classified as protein-rich foods. Examples of such foods are animal foods like meat, fish and egg, and plant foods like pulses, oilseeds and nuts. Milk, too, can be classified in this category if due allowance is made for the large amount of water in it. These foods contain over 20% protein and soyabean is the richest source containing over 40% of protein. Cereals are a moderate source of protein as they contain about 10% protein. Rice contains less protein (7%) than wheat (approximately 10%) and other cereals. Leafy vegetables, fruits, roots, tubers are generally poor sources of protein as they contain less than 2% protein.

2.1.4 **Fat:** Fat is an important component of diet and serves a number of functions in the body. Fat is a concentrated source of energy and per unit weight, it supplies more than twice the energy furnished by either proteins or carbohydrates. It also imparts palatability to a diet and

retards the pace of emptying of the stomach. Presence of fat in the diet is important for the absorption of fat-soluble vitamins like Vitamin A and carotene. Apart from these functions, some fats, particularly those derived from vegetable sources, provide what are known as "essential fatty acids" (EFA) which have vitamin-like functions in the body.

2.1.5 Consumer unit: Consumer unit is a unit used as an indicator of the energy requirement of a group of persons of different sexes and ages. Taking the calorie requirement of an average male in the age group 20-39 doing sedentary work as the norm, the average calorie requirements of males and females of other age groups are expressed as a ratio to this norm (see table below). Thus a household consisting of two men aged 35 and 65 has 1.8 consumer units while a household with one woman aged 28 and a child aged 3 has only 1.25 consumer units.

sex	no. of consumer units assigned to a person											
	age in completed years											
	<1	1-3	4-6	7-9	10-12	13-15	16-19	20-39	40-49	50-59	60-69	70+
male	0.43	0.54	0.72	0.87	1.03	0.97	1.02	1.00	0.95	0.90	0.80	0.70
female	0.43	0.54	0.72	0.87	0.93	0.80	0.75	0.71	0.68	0.64	0.51	0.50

2.1.5.1 Speaking about determination of calorie requirement of a person in terms of age and/or sex is a simplification of the real situation, since the role of various other factors such as body weight, height, nature of work, state of health is ignored. The requirement of calories per consumer unit in reality is not a fixed amount but a variable depending upon all these factors. Nutritionists, attempting to assess calorie requirements per consumer unit, differ in their approaches to the problem, some specifying calorie requirement as function of body weight, while others assign requirements depending on nature of work (sedentary/ moderate/ heavy).⁵ From the 26th round, NSS tables on nutritional intake have expressed observed calorie intakes per consumer unit of different segments of population as percentages of a level of 2700 kilocalories per consumer unit per day. This practice is continued in this report for convenience in making comparisons.

2.1.6 Calculation of household intake of energy, protein and fat: The quantities of food recorded as consumed by the household are converted into the equivalent amounts of energy, protein and fat on the basis of a Nutrition Chart largely based on an ICMR publication⁶ which gives the energy, protein and fat content per unit of different foods in the Indian diet. It needs to be said, however, that the actual intake of nutrients depends on how these foods are actually processed and/or cooked in the surveyed households.

⁵ The recommended calorie intake level for Indians set by the National Institute of Nutrition, ICMR, is profiled on age, sex, body mass and nature of work. The norm set for the reference Indian man of age 18-29 years with a normal body mass index and body weight 60 kg doing sedentary work is 2320 Kcal per day. The norms used by the Planning Commission (ref: *Eleventh Five-Year Plan, 2007-12, Vol.II, Social Sector*) are 2400 Kcal per person per day for the rural sector and 2100 Kcal per person per day for the urban sector.

⁶ C. Gopalan, et.al. (1991): *Nutritive Value of Indian Foods*. National Institute of Nutrition, Indian Council of Medical Research. Hyderabad.

2.1.7 Accounting of meals served to non-household members: It needs to be noted that “consumption” of food items by a household, as recorded by the survey, includes not only the actual consumption by the members of the household but also the consumption of meals prepared in the household and served to non-members during the reference period. This is because there is a practical difficulty of estimating the quantities and values of individual items used for preparing the meals served to employees or others. Therefore, number and value of meals prepared in the household kitchen and provided to guests, employees or others are, to simplify field work, recorded in the domestic consumption of the household *servicing* the meals. Thus, to avoid double counting, cooked meals received as perquisites from employer household or as gift or charity are not recorded in the recipient household. As a general principle, cooked meals purchased from the market for consumption of the members and for guests are also recorded in the purchaser household.

2.1.7.1 This procedure of recording cooked meals served to others in the expenditure of only the serving households leads to bias-free estimates of per capita and total consumer expenditure, and also of per capita or per consumer intake of nutrients for the population as a whole. However, donors of free cooked meals are likely to be concentrated at the upper end of the per capita expenditure range and the corresponding recipients at the lower end of the same scale. Consequently, the derived nutrition intakes may get inflated for the net donors and understated for the net recipients. This point has to be kept in mind while interpreting the NSS consumer expenditure data for any studies relating to the nutritional status of households. (See also ADJUSTED NUTRIENT INTAKE.)

2.1.8 Adjusted nutrient intake: The nutrient intake of a household, as derived from the quantities of consumption reported in the consumer expenditure survey schedule, may not necessarily represent the „true“ level of intake of a household for two reasons. Firstly, there may be members of the household who might have been served meals as guests in other households. According to NSS practice (see ACCOUNTING OF MEALS SERVED TO NON-HOUSEHOLD MEMBERS), these meals would not be recorded as consumption of the household as they would be considered part of the consumption of the meal-serving households. Hence their nutrient content would be omitted from the consumer expenditure of the recipient households. Secondly, meals served by the household to non-household-members get included in the consumer expenditure of the household. While the former phenomenon is likely to depress the *reported* per capita level of nutrient intake of the household, the latter will have a tendency to inflate it. Hence, to bring the estimate of nutrient intake level closer to „true“ intake, the following adjustment procedure is used.

2.1.8.1 Let C be the nutrient (energy/protein/fat) intake of the household as derived from the data on quantities of food recorded in the schedule, and let

- (i) number of meals consumed by the household members in the household or received through purchase or as assistance or payment (excluding meals received from other households) = M_h
- (ii) number of meals consumed by non-members (guests, employees, etc.) = M_g
- (iii) number of meals received free from other households by household members = M_f

Then the adjusted nutrient intake of the household is defined as

$$C_a = C \times \frac{M_h + M_f}{M_h + M_g}$$

2.1.8.2 Notice that the adjustment factor would exceed unity for the households that are recipients of free meals much more than servers of food to guests and employees. It would be less than unity for households that serve more meals to outsiders than receive them.

2.1.8.3 Note, however, that adjustment of nutrient intake is not possible for the data of Schedule Type 2 as that would require the values of M_h , M_g and M_f for the last 7 days as well as for the last 30 days, whereas only the values for the last 30 days are recorded in the schedule.

2.1.9 **Meal:** A „meal“ is composed of one or more readily eatable (generally cooked) items of food, the usually major constituent of which is cereals. The meals consumed by a person twice or thrice a day provide him/her the required energy (calorie) and other nutrients for living and for pursuing his/her normal avocations. A „meal“, as opposed to „snacks“, „*nashta*“ or „high tea“, contains a larger quantum and variety of food. In rare cases, a full meal may contain a larger quantity of non-cereal food.

2.1.10 **Reference period:** The consumption of any good or service by a household or person occurs in the form of a flow over time. A survey may need to record the volume of consumption over a short period such as a day, or a long period such as a year. The time period for which consumption is recorded is called the reference period. It may vary from item to item. Because the respondents are asked to recall and report the volume of consumption, the reference period is also called the recall period. Reference periods used in this survey are discussed in detail in Chapter One, paragraph 1.5.2.

2.2 Household consumer expenditure

2.2.1 **Household:** A group of person normally living together and taking food from a common kitchen constitutes a household. The word "normally" means that temporary visitors are excluded but temporary stay-aways are included. Thus, a son or daughter residing in a hostel for studies is excluded from the household of his/her parents, but a resident employee or resident domestic servant or paying guest (but not just a tenant in the house) is included in the employer/host's household. "Living together" is usually given more importance than "sharing food from a common kitchen" in drawing the boundaries of a household; however, in the special case of a person taking food with his family but sleeping elsewhere (say, in a shop or a different house) due to space shortage, the household formed by such a person's family members is taken to include that person also. Each inmate of a mess, hotel, boarding and lodging house, hostel, etc., is considered as a single-member household except that a family living in a hotel (say) is considered as one household only; the same applies to residential staff of such establishments. Under-trial prisoners in jails and indoor patients of hospitals, nursing homes, etc., are considered as members of the households to which they last belonged.

2.2.2 Household size: The size of a household is the total number of persons in the household.

2.2.3 Household consumer expenditure: The expenditure incurred by a household on domestic consumption during the reference period is the household's consumer expenditure. Expenditure incurred towards productive enterprises of households is excluded from household consumer expenditure. Also excluded are expenditure on purchase and construction of residential land and building, interest payments, insurance premium payments, payments of fines and penalties, and expenditure on gambling including lottery tickets. Money given as remittance, charity, gift, etc. is not consumer expenditure. However, self-consumed produce of own farm or other household enterprise is valued and included in household consumer expenditure. So are goods and services received as payment in kind or free from employer, such as accommodation and medical care, and travelling allowance excluding allowance for business trips.

2.2.3.1 For articles of food (including *pan*, tobacco and intoxicants) and fuel, household consumption is measured by the *quantity of the article actually used* by the household during the reference period, irrespective of the expenditure incurred on it. For articles of clothing and footwear, consumption by a household is considered to occur at the moment when the article is brought into maiden or first use by any household member. The consumption may be out of (a) purchases made in cash or credit during the reference period or earlier; (b) home-grown stock; (c) receipts in exchange of goods and services; (d) any other receipt like gift, charity, borrowing and (e) free collection. Home produce is evaluated at the ex farm or ex factory rate.

2.2.3.2 For evaluating household consumption of all other items, a different approach is followed: the *expenditure* made by the household during the reference period for the purchase or acquisition of goods and services, regardless of when the goods and services are used and by whom, is considered as household consumption.

2.2.3.3 To simplify data collection, consumption of food processed *in the home* from one "item" into another, such as milk converted into curd or butter, vegetables converted into pickles, and rice converted into liquor are recorded in the survey against the primary or ingredient item(s), such as milk, instead of the item in which form it is consumed (e.g. curd). For some item groups such as intoxicants, this procedure leads to an underestimation of consumption with a corresponding overestimation of the item groups of the major ingredients, such as cereals.

2.2.3.4 Value of consumption: For items of food, *pan*, tobacco, intoxicants, fuel, clothing and footwear, this term is not synonymous with expenditure incurred by the household on the item, and the following rules of valuation are specified. Consumption out of purchase is evaluated at the purchase price. Consumption out of home produce is evaluated at ex farm or ex factory rate. Value of consumption out of gifts, loans, free collections, and goods received in exchange of goods and services is imputed at the rate of average local retail prices prevailing during the reference period.

2.3 Monthly per capita expenditure (MPCE) and its different measures

2.3.1 The NSS concept of MPCE is defined first at the household level (household monthly consumer expenditure \div household size). This measure serves as the indicator of the household's level of living.

2.3.2 Next, each *individual's* MPCE is defined as the MPCE of the household to which the person (man, woman or child) belongs. This assigns to each person a number representing his or her level of living. The distribution of *persons* by their MPCE (i.e., their household MPCE) can then be built up, giving a picture of the population classified by economic level. Further, the population can be classified into different segments each representing a particular range of MPCE, and hence ordered, as it were, by level of living. (See paragraph 2.3.5.1 below.)

2.3.3 Two measures of MPCE are relevant to this report. They may be defined as follows.

2.3.3.1 **Uniform Reference Period MPCE** (or $MPCE_{URP}$): This is the measure of MPCE obtained by the NSS consumer expenditure survey (CES) when household consumer expenditure on each item is recorded for a reference period of "last 30 days" (preceding the date of survey).

2.3.3.2 **Modified Mixed Reference Period MPCE** (or $MPCE_{MMRP}$): This is the measure of MPCE obtained by the CES when Schedule 1.0, Type 2, is canvassed in a household, and the reference periods specified in this schedule type are used to record household consumer expenditure.

2.3.4 **Percentiles and fractiles of an MPCE distribution:** For any number p between 0 and 100, the MPCE level such that $p\%$ of the population lies below it is called the p^{th} percentile of the MPCE distribution (over persons). For any fraction f between 0 and 1, the MPCE level such that $100f\%$ of the population lies below it is called the f^{th} fractile of the MPCE distribution. Thus the 0.5^{th} fractile is simply the 50^{th} percentile (the median) of the distribution and the 0.05^{th} fractile is simply the 5^{th} percentile, the 0.1^{th} fractile is the 10^{th} percentile, and so on.

2.3.5 **Fractile classes:** A fractile class consists of population whose MPCE lies between two fractiles, such as the 0.05^{th} fractile and the 0.1^{th} fractile, that is, between the 5^{th} and the 10^{th} percentile.

2.3.5.1 Fractile classes are often referred to by the end points in percentile form. Thus „0-5%“ refers to the bottom 5% of population ranked by MPCE, „5-10%“ to the next 5% of population ranked by MPCE, and so on. The fractile classes for which estimates are provided here (at all-India rural/urban level only, not at State/UT level) are:

0-5%, 5-10%, 10-20%, 20-30%, 30-40%, ..., 70-80%, 80-90%, 90-95%, and 95-100%.

In the tables, the above fractile classes have sometimes been referred to as 01, 02, 03, ..., 11, 12 respectively, and sometimes as 0-5, 5-10, 10-20, etc.

2.3.6 Major States: This refers to the 17 States of India which had a population of 20 million or more according to the Census of 2001. The States are: Andhra Pradesh, Assam, Bihar, Chhattisgarh, Gujarat, Haryana, Jharkhand, Karnataka, Kerala, Madhya Pradesh, Maharashtra, Odisha, Punjab, Rajasthan, Tamil Nadu, Uttar Pradesh and West Bengal.

2.4 Different reference periods used for collection of consumption data and their impact on estimates of nutritional intake

2.4.1 For the study of many socio-economic variables measurable at the household level, including health- and nutrition-related variables, it is of interest to investigate the behaviour of the variable with rise in living standards. The NSS consumer expenditure survey, because it measures household MPCE in addition to collecting data on food consumption, is suitable for such analysis of data.

2.4.2 A complexity is, however, introduced by the fact that the survey divided the sample households into two groups and canvassed two different schedules on consumer expenditure in the two groups of households. The two schedules differed only in respect of reference period. The combination of reference periods used for food in Schedule Type 2 was expected to result in better recall and reporting, while Schedule Type 1 performed the function of providing a dataset to maintain continuity with the past series. In case of food items, Schedule Type 1 had a reference period of “last 30 days” for all items, while Schedule Type 2 used “last 30 days” for a few items and “last 7 days” for the rest. It was fully anticipated that the average monthly quantity of a food item consumed by households, when calculated from Schedule Type 2, would differ appreciably from the average calculated from Schedule Type 1, even if the schedules had been canvassed in the same households, because the reporting errors or biases associated with the two reference periods are expected to be different. This implies that the estimates of food quantities, and therefore, of nutritional intake, from Schedule Type 2 would be different from those derived from Schedule Type 1 not only due to sampling variability but because of differentials in (non-sampling) reporting errors.

2.4.3 Bearing this in mind, tabulation of all data on nutrition has been done separately for Schedule Type 1 and Schedule Type 2. The discussion on trends in nutritional intake has, on the other hand, used the Schedule Type 1 data of 2011-12 for better comparability with the past.

Nutrition Chart

Nutrient contents of different items are largely based on “Nutritive Values of Indian Foods” by C. Gopalan, B.V. Ramasastry and S.C. Balasubramanian, revised and updated by B.S. Narasinga, Y.G. Deosthale and K.C. Pant, 1991.

Generally, the total intake of calorie, protein and fat from an item is derived from the quantities reported as consumed by the sample households. The nutrient contents of each item per unit of quantity (as specified in the schedule) are shown in the table below.

For some items having variable food content, average nutrient contents per rupee are given in the table instead of per unit of quantity. For such items the unit has been shown as “Re”. These figures multiplied by the *value* of consumption give the total quantities of nutrients derived from that item.

For items for which the unit (as explained above) is “Re”, the fall in value of the rupee is periodically adjusted for by deflating the nutrient contents by the appropriate consumer price index, viz., CPI(AL) for rural and CPI(IW) for urban. Since different price indices are used for rural and urban sectors, there are, for these items, two sets of nutrient content coefficients – one for rural and the other for urban households.

For items newly introduced in the 68th round schedule (including items formed by splitting old items), and items created by merging two or more old items, the nutrient coefficients have been computed according to the procedures drawn up by a Subgroup of the Working Group for NSS 68th round formed specifically for the purpose, which are stated at the end of this chart.

Procedures decided upon by the Subgroup for determining nutrient coefficients for the new items, including split items

Sl. no.	Category	Procedure	Applicable to
1.	Items – formed by merging old items – for which quantity of consumption of the constituent items is recorded in the schedule in both 66 th and 68 th rounds	New rural/urban nutrient coefficients may be calculated as a weighted average of nutrient coefficients of the constituent items using the estimated quantities of per capita consumption from the 66 th round as weights.	items 200 and 213
2.	Items – formed by merging old items – for which quantity of consumption of all the constituent items is not recorded in the schedule in at least one of the two rounds	Estimated value of per capita consumption of constituent items from the 66 th round may be used as weights to obtain the weighted average of nutrient coefficients per rupee of consumption of the constituent items; this will represent the built-up rural/urban nutrition coefficients per rupee of the merged item at 2009-10 prices. Finally, this can be adjusted by the rural/urban CPI ⁷ to get rural/urban nutrition coefficients per rupee of the merged item at 2011-12 prices.	items 217 and 290
3.	New items (including split items) in the “edible oil” subgroup	It is observed that according to the NIN publication “Nutritive Value of Indian Foods” (Gopalan, et.al., 1991), the amounts of energy, protein and fat contained per kg of different varieties of edible oil can all be taken as 9000 Kcal, 0 gm and 1000 gm respectively. These may be taken as the nutrient coefficients for “refined oil” (new item) and the split item “other edible oil”.	items 184 and 185
4.	New spice items and the split item “other spices”	For items 252 (jeera) and 253 (dhania), the nutrient coefficients may be taken from the coefficients given for these items in Gopalan, et.al. (1991) under the category “Condiments and Spices”. However, it is desirable that consumption of coriander (dhania) leaf be recorded under “palak/ other leafy vegetables” from the next quinquennial round	items 252, 253 and 261

⁷ An index for the price level corresponding to the mid-point of the reference period July 2009 - June 2010 was obtained by averaging consumer price indices for Dec 2009 and Jan 2010. Similarly, an index for the price level corresponding to the mid-point of the reference period July 2011 - June 2012 was obtained by averaging consumer price indices for Dec 2011 and Jan 2012. The ratio of these two averages was used as a measure of the required inflationary factor. The consumer price index used was CPI (AL) (base 1986-87=100) for the rural sector and CPI (IW) (base 2001=100) for the urban sector.

		onwards in view of the difference in nutrient content of coriander leaf from coriander seeds. For the item “other spices”, which in the 68 th round survey excluded jeera and dhania, the coefficients for “other spices” used in the 66 th round may be used, as these do not differ widely from the coefficients for jeera and dhania as given in Gopalan, et.al. (1991).	
5.	“Cooked snacks purchased”, “other served processed food”, “papad, bhujia, etc.”, and “other packaged processed food”	Each of these four items covers a range of foods of variable content and no data are available for development of coefficients for these. Coefficients used (per rupee at 2009-10 prices) in the 66 th round for the two items “salted refreshments” and “other processed food” (which were incidentally identical) may be used for these items after adjustment for inflation.	items 283, 284, 292 and 296
6.	“Chips”	The range of food covered by this item is more homogeneous and nutrition information (nutrients per gm) is often available on the packaging provided by the manufacturers. Attempts may be made by SDRD within the next few days to obtain such information for chips made from different ingredients including potatoes and plantain. If these do not differ substantially, coefficients for this item may be derived based on the information collected. If there is substantial variation, the same coefficients may be used for item 293 as for items 283, 284, 292 and 296.	item 293

Chapter Three

Intake of Dietary Energy

3.0.1 Intake of dietary energy per person continues to be the most widely used indicator of the level of nutrition of a population. Levels of calorie intake are used, in particular, as indicators of adequacy of nourishment of populations of the developing countries and of economically deprived or geographically isolated segments considered to be at risk of under-nourishment. This chapter presents estimates of various aspects of dietary energy intake – its average, its distribution over households and persons, the contributions of different food categories, etc., for India and the major States.

3.0.2 In examining the estimates of distribution of calorie intake over persons, it needs to be borne in mind that data on food consumption was collected for households as a whole and no break-up over individual household members is available. Accordingly, in line with NSS practice, the distribution of calorie intake over *persons* is derived by assigning to each person in a surveyed household the per capita calorie intake of the household. The true range of variation of calorie intake over persons would naturally be wider than the data reveals – for instance, an infant would have a lower intake than the per capita intake of its household. However, for the purpose of studying adequacy of dietary energy intake, household per capita calorie intake is expected to be a useful and illuminating tool of analysis.

3.0.3 The findings presented in this chapter are, as explained in paragraph 2.4.3 of Chapter Two, based on Schedule 1.0, Type 2. Detailed estimates are given in Appendix A. *Further, the Statements at the end of Chapter Six give all-India estimates by fractile class of MPCE and State-level estimates not disaggregated by MPCE class.* The findings may be grouped as follows:

- (a) Average calorie intake: States and all-India
- (b) Average calorie intake: variation with level of living
- (c) Distribution of calorie intake: States and all-India
- (d) Distribution of calorie intake: variation with level of living
- (e) Percentage break-up of calorie intake by food group: States and all-India

3.1 Average calorie intake: States and all-India

3.1.1 As explained in Chapter Two, estimates of calorie intake are often given in this report per consumer unit as well as per capita. Expressing calorie intake per consumer unit is aimed at adjusting for difference in calorie requirements among persons on account of age and sex differences, and thereby obtaining a sharper indicator of adequacy of intake than the per capita figures provide.

3.1.2 The per capita estimates and per consumer unit estimates of *average* calorie intake usually stand in a fixed proportion to one another, determined by the number of consumer

units per 1000 (say) of population, though this is subject to age-sex composition and the changes therein over time and space.

3.1.3 For individual households, the ratio of the measure of per consumer unit calorie intake to the measure of per capita calorie intake may vary widely because of inter-household difference in age-sex composition. Thus, for a household with no children, the two measures will be much closer than for a household with a large proportion of children and babies (see table of consumer units on page 8). Hence, the per consumer unit calorie intake gives a much better idea of adequacy of calorie intake at the level of the individual household. Studies of *distribution* of calorie intake over households or persons will thus benefit from the use of per consumer unit calorie intake as the study variable rather than per capita calorie intake. For this report, distributions of calorie intake over households and persons have been generated using per consumer unit calorie intake.

State	calorie intake (Kcal) per day per capita		calorie intake (Kcal) per day per consumer unit	
	rural	urban	rural	urban
(1)	(2)	(4)	(6)	(8)
Andhra Pradesh	2365	2281	2926	2789
Assam	2170	2110	2617	2574
Bihar	2242	2170	2731	2625
Chhattisgarh	2162	2205	2661	2697
Gujarat	2024	2154	2497	2627
Haryana	2441	2443	2992	2988
Jharkhand	2138	2175	2645	2647
Karnataka	2164	2245	2675	2753
Kerala	2162	2198	2749	2784
Madhya Pradesh	2234	2209	2711	2676
Maharashtra	2260	2227	2802	2722
Odisha	2215	2191	2750	2665
Punjab	2483	2299	3066	2822
Rajasthan	2408	2320	2959	2832
Tamil Nadu	2052	2112	2560	2619
Uttar Pradesh	2200	2144	2717	2622
West Bengal	2199	2130	2710	2624
all-India	2233	2206	2752	2700

3.1.4 Table T3 shows that all the major States had average levels of calorie intake in 2011-12 within + or -11% of the all-India average for the sector (2233 Kcal per capita for rural and 2206 for urban). Though the overall magnitudes of deviation of average calorie intake of the States from the all-India average do not tend to change substantially when per consumer unit estimates are used instead of per capita estimates, there are situations where State averages do shift from below national average to above, and vice versa (Madhya Pradesh and Bihar are examples of the latter kind). This suggests that there is some inter-State difference due to difference in age-sex composition between States. Deviations from the all-India average are a little wider in the rural sector than in the urban. At the all-India level, in both rural and urban sectors, calorie intake per consumer unit is about 23% higher than intake per capita. Detailed estimates for all States and UTs (based on Schedule Type 2) are available in Table 3C of

Appendix A. Detailed estimates based on Schedule Type 1 are given in Tables 3A and 3B for purposes of comparison with data from earlier rounds.

Table T4: Average calorie intake per capita and per consumer unit across MPCE fractile classes in 2011-12

3.2 Average calorie intake: variation with level of living

3.2.1 At all-India level, average calorie intake across fractile classes (formed separately for rural and urban sectors) of the distribution of population by MPCE_{MMRP} is shown in Table T4. In each sector average calorie intake (per capita or per consumer unit) is seen to be a monotonically increasing function of MPCE class. The difference between the bottom fractile class (bottom 5% of population ranked by per capita expenditure level) and the next fractile class (the next 5%) in per capita calorie intake is seen to be as high as 183 in rural India. The difference between successive decile classes (10-20, 20-30, 30-40, etc.) is at first less than 100 but rises to much higher levels as one moves to the higher classes. The relatively large increase of calorie intake for the top fractile class may be because it is open-ended. For State-level estimates by fractile class of MPCE, please see Table 3 of Appendix A.

3.3 Distribution of calorie intake: States and all-India

3.3.1 The distribution of rural and urban households over 8 classes of per consumer unit calorie intake based on Schedule Type 2 is given for State/UTs and all-India in Table 6B of Appendix A (MPCE-fractile-classwise) and summarised statewise in Statement 6S (page 60).

3.3.2 While using these statements and the text tables T5 and T6 based on them, it needs to be remembered (see Chapter Two, paragraphs 2.1.8 to 2.1.8.3) that these calorie intakes cannot be adjusted to remove the effect of meals served to non-members or take account of food consumed without payment in other households. To the extent that these practices prevail, the range of variation of calorie intake over households may be somewhat overstated by Table T5 (and also Table T6).

3.3.3 The following conclusions may be drawn from Table T5:

Table T5: Per 1000 distribution of households by level of calorie intake per consumer unit per day in 2011-12: major States

State	per 1000 no. of RURAL hhs with calorie intake per consumer unit per day*				per 1000 no. of URBAN hhs with calorie intake per consumer unit per day*

West Bengal	181	343	260	217	157	363	248	232
All-India	149	316	279	257	158	318	255	270

* expressed as a percentage of a level of 2700 Kcal per consumer unit per day

- About 59.5% of rural households in India had energy intake in the range 80-120 (2160-3240 Kcal/consumer unit/day).
- Findings of earlier surveys have confirmed that food consumption patterns differ across the States and some States consume significantly less cereals per person than others. This appears to be responsible for the relatively high concentration in the lowest calorie intake ranges in States such as Gujarat, Tamil Nadu and Kerala, all of which had monthly rural per capita cereal consumption in the range 8.5-9.5 kg in 2011-12 compared to the all-India average of 11.2 kg, while States such as Odisha and Bihar, where per capita cereal intake exceeded 12 kg, had relatively few households in the low calorie intake ranges.
- Notably, Haryana and Punjab, two States with monthly per capita rural cereal consumption in the range 9.3-9.4 kg in 2011-12, nevertheless had very few households in the lowest class (<80).
- The all-India urban energy intake distribution was similar to the rural, with slightly higher numbers of households in the top and bottom intake classes.
- Inter-State differences in energy intake distributions, especially at the lower end, were much less prominent in the urban sector of India than in the rural, though Haryana was an exception to this rule.

3.3.2 The corresponding distributions of energy intake for *persons* in place of households (considering a person's per consumer unit calorie intake to be the per consumer unit calorie

intake of his or her household) are provided fractile-classwise in Table 7 of Appendix A and summarised in Statements 7A, 7B and 7S. An important difference between Statements 6S and 7S is that in any of the lower calorie intake classes, the proportion of *persons* for any State/UT (Statement 7S) is generally greater than the proportion of *households* in the same class (Statement 6S). This is a consequence of the fact that the lower calorie intake classes contain, in general, poorer households, which, on the average, have more members than the upper calorie intake classes.

3.3.3 The distribution of rural and urban households over 8 classes of per consumer unit calorie intake, as estimated from Schedule Type 2 data, is given for each fractile class of households in each State/UT and all-India in Table 6B of Appendix A and the corresponding distribution for persons in Table 7B of Appendix A. Estimates based on Schedule Type 1 data are given in Tables 6A and 7A for purposes of comparison with earlier rounds.

3.4 Distribution of calorie intake: variation with level of living

3.4.1 The variation in calorie intake across different levels of living is brought out sharply in Table T6, which shows distribution of all-India rural and urban households in different fractile classes of per capita expenditure over 4 broad classes of calorie intake per consumer unit.

Table T6: Per 1000 distribution of hhs in different fractile classes of MPCE by level of calorie intake per consumer unit per day in 2011-12: all-India

fractile class of MPCE	per 1000 no. of RURAL hhs with calorie intake per consumer unit per day*				per 1000 no. of URBAN hhs with calorie intake per consumer unit per day*			
	<80	80-100	100-120	≥120	<80	80-100	100-120	≥120
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)
1	570	330	69	31	589	311	67	33
2	389	427	141	43	471	379	99	52
3	289	427	218	66	365	437	150	47
4	240	432	239	88	283	447	203	67
5	195	409	274	122	203	448	230	118
6	142	375	322	161	157	423	269	150
7	99	372	322	206	111	381	322	186
8	80	331	353	236	104	361	301	233
9	66	271	316	347	60	271	354	316
10	37	196	330	436	46	209	322	424
11	28	162	283	527	28	130	251	591
12	20	73	230	676	16	58	195	731
all	149	316	279	257	158	318	255	270

* expressed as a percentage of a level of 2700 Kcal per consumer unit per day

3.4.2 Table T6 shows a very strong association between per capita expenditure and distribution of per capita calorie intake. For instance,

- The proportion of rural households with calorie intake in the <80 category (below 2160 Kcal/consumer unit/day) is 57% for the bottom class (bottom 5% of population ranked

by per capita expenditure level), falls to 39% for the next 5%, and so on, continuing to fall until it drops to only about 2% for the top 5% of population.

- Similarly, the proportion of urban households with calorie intake in the <80 category (below 2160 Kcal/consumer unit/day) is 59% for the bottom 5% of population ranked by MPCE, falls to 47% for the next 5%, and continues to fall, reaching 1.6% for the top 5% of population.
- The proportion of households in the >120 category (above 3240 Kcal/consumer unit/day) is about 3% for the bottom 5% of households in both sectors, rising rapidly to reach nearly 68% for the top 5% of rural population and 73% for the top 5% of urban population.

3.4.3 Statements 6 (A/B) and 7 (A/B) respectively show the all-India distribution of households and population in different fractile classes of MPCE over calorie intake levels (per consumer unit) using 8 classes of calorie intake level.

3.5 Percentage break-up of calorie intake by food group: States and all-India

3.5.1 Of all the food groups, cereals make the largest contribution to calorie intake. Table T7 (cols. 6 & 7) shows this contribution to be about 57% for rural India as a whole and about 48% for urban India. The contribution of cereals varies across the major States from 42-45% (Punjab, Haryana and Kerala) to 66-70% (Odisha, Assam and Chhattisgarh) in the rural sector and from 39-42% (Haryana, Gujarat and Punjab) to 59-60% (Odisha, Bihar and Assam) in the urban sector.

Table T7: Percentage share of food and cereals in total household consumer expenditure, and percentage contribution of cereals to calorie consumption: major States, 2011-12

State	% expenditure on food		% expenditure on cereals		% of calories from cereals	
	rural	urban	rural	urban	rural	urban

All-India	52.9	42.6	10.7	6.6	57.4	48.0

3.5.2 The other columns of Table T7 show estimated share of cereals and of all food in household consumer expenditure based on Sch. Type 2 (see Table 4B, Appendix A, and Statement 4S). For India as a whole the share of cereals in household consumer expenditure is 10.7% for the rural sector and 6.6% for the urban. Across the major States, the share of cereals in the rural sector varies widely, from below 5.5% (Punjab and Kerala) to 17% (Jharkhand and Odisha). In the urban sector, too, the highest share of cereals (Bihar, 12.4%) is three times the lowest share (Haryana, 3.7%). In general, States with a large proportion of expenditure on cereals are seen to be more dependent on cereals for their calorie intake.

3.5.3 Estimates of the shares of cereals and of all food in household consumer expenditure for different fractile classes of MPCE based on Schedule Type 1 (URP) and Schedule Type 2 data are given in Table 3A/3B (R&U) of Appendix A.

3.5.4 Table T8 shows the percentage contribution of cereals to calorie intake (see Table 4B of Appendix A and Statement 4B), as well as the percentage shares of cereals and food in total consumer expenditure, across fractile classes of the MPCE distribution, based on Schedule Type 2. With each successive MPCE class, the contribution of cereals to calorie intake is seen to fall progressively. In rural India it falls from 70% in the bottom fractile class of population to 42% in the top fractile class, and in urban India from about 66% to 29%. The share of food in total expenditure, too, declines steadily with rise in MPCE level, and the share of cereals plunges to 4.8% in the top rural fractile class (top 5% of population ranked by MPCE) and 2.2% in the top urban fractile class.

Table T8: Percentage expenditure on food and on cereals, and percentage contribution of cereals to calorie consumption across MPCE classes

MPCE fractile class	% expenditure on food		% expenditure on cereals		% of calories from cereals	
	rural	urban	rural	urban	rural	urban
(1)	(2)	(3)	(4)	(5)	(6)	(7)
1	60.6	59.2	19.7	16.9	70.4	65.5
2	60.2	58.6	18.2	14.1	67.4	60.4
3	60.3	56.2	17.0	12.6	65.2	58.1
4	59.2	54.4	15.4	11.1	63.5	55.5
5	58.9	52.6	14.3	9.8	61.0	52.8
6	58.0	50.2	13.1	8.8	59.3	50.0
7	57.0	48.5	12.1	8.2	58.1	49.4
8	55.7	46.4	11.0	7.3	56.3	46.3
9	54.2	43.8	10.1	6.5	54.4	44.0
10	51.8	40.5	8.8	5.4	51.8	41.1
11	47.6	36.4	7.1	4.1	48.2	36.9
12	39.5	27.8	4.8	2.2	42.1	29.4
all	52.9	42.6	10.7	6.6	57.4	48.0

3.5.4 The itemwise data on household food consumption collected in the NSS survey is grouped into nine broad food categories as follows:

- | | |
|------------------------------------|---|
| (i) cereals and cereal substitutes | (vi) meat, eggs and fish |
| (ii) roots and tubers | (vii) milk and milk products |
| (iii) sugar and honey | (viii) oils and fats |
| (iv) pulses, nuts and oilseeds | (ix) miscellaneous food, food products
and beverages |
| (v) vegetables and fruits | |

Accordingly, the total calorie intake of the households is also segregated into these nine categories, enabling the study of their respective shares in total calorie intake.

3.5.5 Now, with cereals accounting for over 50% of calorie intake for many States, especially in rural areas, the percentage contributions of most of the categories (ii) to (ix) for any State-sector are usually smaller than 10 and frequently as low as 0-3. For easier exposition of the relative importance of the contributions of categories (ii) to (ix), Table T9 shows the percentage break-up of calorie intake from non-cereals over the non-cereal food categories.

Table T9: Percentage break-up of calorie consumption from non-cereal food over eight non-cereal food groups: major States, 2011-12

State	% share of non-cereals in calorie intake	% share of calorie intake from non-cereals contributed by food group								
		roots & tubers	sugar & honey	pulses, nuts & oilseeds	veg. & fruits	meat, eggs & fish	milk & milk products	oils & fats	misc. food, etc.	all
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)
Rural										
Andhra Pradesh	42.6	4	7	14	8	5	12	24	26	100

Madhya Pradesh	47.5	7	13	12	7	1	16	26	18	100
Maharashtra	57.3	4	10	15	8	3	13	25	21	100
Odisha	40.4	9	8	11	9	3	11	19	30	100
Punjab	58.2	7	14	9	6	1	27	22	13	100
Rajasthan	50.8	6	12	7	7	1	25	25	17	100
Tamil Nadu	53.8	4	8	15	7	4	15	18	28	100
Uttar Pradesh	48.3	11	11	11	8	2	19	24	14	100
West Bengal	49.4	13	8	7	8	7	9	25	24	100
all-India	52.0	7	10	12	8	3	16	24	21	100

3.5.6 On the whole, the pattern of calorie intake from non-cereal food was similar in rural and urban areas. “Oils and fats” accounted for 22% of such calorie intake in rural areas and 24% in urban areas. The group next in importance was “miscellaneous food, food products and beverages” (“misc. food, etc.” in Table T9) with a share of 21% in calorie intake from non-cereal food in both sectors. Next came “milk and milk products”, contributing 15% to calorie intake from non-cereal food at all-India level in the rural sector and 16% in the urban. The shares of “sugar and honey” and “pulses, nuts and oilseeds” were around 10-12% each in both rural and urban areas. The share of “roots and tubers” was higher in rural areas (9%) than in urban (7%). The share of “meat, eggs & fish” was only 3% in both sectors.

3.5.7 Inter-State variation was more pronounced in rural than in urban India. Thus the share of “milk and milk products”, which was between 8% and 27% in the urban sector of all the major States, ranged from 3% to 36% in the rural sector, being 7% or less in 4 major States. In both sectors, inter-State variation was wide in case of “meat, eggs and fish”, but low for “vegetables and fruits”, “oils and fats” (though in the latter case the percentage for Gujarat was well ahead of the remaining major States), and also low for “miscellaneous food, food products and beverages”. “Sugar and honey” usually had a higher contribution in States with higher average levels of living, while “roots and tubers” had a larger share in the States of Bihar, West Bengal, Jharkhand, Uttar Pradesh, Odisha and Assam.

Chapter Four

Intake of Protein and Fat

4.0.1 Like carbohydrates, proteins and fats, too, are oxidised in the body to yield energy which the body needs. The primary function of proteins, however, is to provide amino-acids for building body proteins. Again, fats, particularly the vegetable oils, besides being a concentrated source of energy, provide essential fatty acids which have a vitamin-like function in the body. Therefore the intake of proteins and fats by any population needs to be investigated separately and not merely in the context of the energy they provide. The present chapter discusses different aspects of the intake of proteins and fats in India and the major States in 2011-12.

4.0.2 The contents of this chapter are organised as follows:

- (a) Average protein intake: States and all-India
- (b) Average protein intake: variation with level of living
- (c) Percentage break-up of protein intake by food category: States and all-India
- (d) Percentage break-up of protein intake by food category: variation with level of living
- (e) Average fat intake: States and all-India
- (f) Average fat intake: variation with level of living

4.0.3 The discussion of results in this chapter, like the discussion in Chapter Three, is based on data collected through Schedule 1.0, Type 2. Detailed estimates for all States and UTs are available in Table 3B and 4B (R&U) of Appendix A, separately for each fractile class of MPCE (MMRP). For the purpose of comparison with data from earlier rounds, detailed estimates based on Schedule Type 1 are given in Tables 3A and 4A of Appendix A, separately for each fractile class of MPCE (URP). (*See also Statements 3A/3B/3S and 4A/4B/4S.*)

4.1 Average protein intake: States and all-India

4.1.1 Table T10 shows per capita and per consumer unit protein intake in rural and urban areas of India and the major States. At the all-India level protein intake per person per day was 61gm in the rural sector and 60gm in the urban. Protein intake per consumer unit per day was 75gm in the rural sector and 74gm in the urban. The range of inter-State variation for major States was appreciably wider in the rural sector, where per capita intake per day varied from 52gm (Chhattisgarh) to 73gm (Haryana), than in the urban (55gm to 69gm). In some of the poorer States, protein intake was markedly lower in the rural sector than in the urban; examples are Jharkhand (rural: 55gm, urban: 60gm) and Chhattisgarh (rural: 52gm, urban: 56gm). On the other hand, in the States with the highest levels of protein intake, viz., Haryana, Rajasthan and Punjab, it was the rural population and not the urban that had higher protein intake (about 4-5gm higher).

4.1.2 Detailed estimates for all States and UTs based on Schedule Type 2 are available in Table 3B of Appendix A, and estimates based on Schedule Type 1 in Table 3A, separately for each fractile class of MPCE. Tables 3A and 3B also give percentage of total expenditure spent on food and on cereals.

Table T10: Average daily protein intake per capita and per consumer unit in 2011-12: major States

State	protein intake (gm) per day per capita		protein intake (gm) per day per consumer unit	
	rural	urban	rural	urban
(1)	(2)	(3)	(4)	(5)
Andhra Pradesh	59.9	59.3	74.1	72.5
Assam	55.1	54.9	66.5	67.0
Bihar	62.9	60.9	76.7	73.6
Chhattisgarh	51.7	55.8	63.6	68.2
Gujarat	53.7	56.3	66.2	68.6
Haryana	72.8	68.6	89.3	83.9
Jharkhand	54.7	60.3	67.6	73.4
Karnataka	56.0	59.1	69.2	72.5
Kerala	61.0	62.7	77.5	79.5
Madhya Pradesh	65.0	63.1	78.8	76.4
Maharashtra	60.7	61.2	75.3	74.8
Odisha	53.4	55.9	66.3	68.1
Punjab	70.0	64.9	86.5	79.6
Rajasthan	71.9	66.7	88.4	81.4
Tamil Nadu	53.3	55.7	66.5	69.1
Uttar Pradesh	62.6	61.1	77.3	74.8
West Bengal	55.6	57.9	68.5	71.3
all-India	60.7	60.3	74.8	73.8

4.2 Average protein intake: variation with level of living

4.2.1 Table T11 shows average protein intake per capita per day to rise steadily in rural India from 43gm in the lowest MPCE fractile class (bottom 5% of population ranked by per capita expenditure level) to 91gm in the top fractile class (top 5%), and in urban India from 44gm in the lowest fractile class to 87gm in the highest. Average protein intake per consumer unit, too, shows a similar rise in both sectors.

Table T11: Average daily protein intake per capita and per consumer unit across MPCE fractile classes in 2011-12, all-India

MPCE fractile class	protein intake (gm) per day				MPCE fractile class	protein intake (gm) per day			
	per capita		per consumer unit			per capita		per consumer unit	
	R	U	R	U		R	U	R	U
(1)	(2)	(3)	(4)	(5)	(1)	(2)	(3)	(4)	(5)
1	42.8	44.0	53.2	54.3	7	60.5	60.2	74.2	73.5
2	48.0	47.5	59.8	58.5	8	62.5	62.1	76.4	75.8
3	51.5	50.6	63.9	62.4	9	65.8	66.0	80.9	80.2
4	53.8	53.3	66.4	65.4	10	70.3	69.6	86.5	84.8
5	56.2	55.9	69.4	68.5	11	74.1	77.2	91.3	94.6
6	58.3	57.7	71.7	70.6	12	90.9	86.5	111.8	105.9

4.3 Percentage break-up of protein intake by food category: States and all-India

4.3.1 The percentage break-up of protein intake over 5 food groups, viz., cereals, pulses, milk & milk products, egg/fish/meat, and other food, is shown in Table T12 for India and the major States. Detailed estimates based on Schedule Type 2 for all States and UTs are given in Table 4C of Appendix A and estimates based on Schedule Type 1 in Table 4A/4B, separately for different fractile classes of MPCE.

Table T12: Percentage break-up of protein intake by food group: major States, 2011-12

State	% share of protein intake coming from					all
	cereals	pulses	milk & milk products	egg, fish & meat	other food	
(1)	(2)	(3)	(4)	(5)	(6)	(7)
Rural						
Andhra Pradesh	51	11	8	12	18	100

West Bengal	47	8	7	19	19	100
all-India	49	11	12	9	18	100

4.3.2 Cereals formed the most important source of protein among the 5 food groups, the share of cereals in protein intake being 58% for rural and 49% for urban India. In the rural

sector the share of cereals ranged between 47% and 66% in all major States except Kerala, where it was 37%. In the urban sector the share of cereals was 35% in Kerala and 41%-61% in all other major States. In both sectors the seven States with the largest contributions of cereals to protein intake were Bihar, Madhya Pradesh, Uttar Pradesh, Odisha, Chhattisgarh, Jharkhand and Rajasthan.

4.3.3 The share of milk and milk products in protein intake was 10% in rural India and 12% in urban India. It was noticeably above the national average in Haryana (rural: 27%; urban: 22%), Punjab (rural and urban: 23%), Rajasthan (rural: 17%; urban: 18%), and Gujarat (rural: 14%; urban: 17%). Among the 17 major States, these 4 States and Uttar Pradesh (rural: 11%; urban: 13%) were the *only* 5 States where the contribution of milk and milk products to protein intake was higher than the national average.

4.3.4 The contribution of pulses to protein intake was 10% in rural India and 11% in urban India. In the rural sector, this contribution was in the range 9-12% for 12 of the major States while in the urban sector it was in the range 10-13% for 13 of the major States.

4.3.5 The share of meat, fish and egg in protein intake was only 7% in rural India and 9% in urban India. It was as high as 26% in both rural and urban Kerala. The share was 10% or more in only 5 other major States: West Bengal (rural: 14%; urban: 19%), Assam (rural: 14%; urban: 16%), Andhra Pradesh and Tamil Nadu (rural and urban: 12%), and Karnataka (rural: 10%; urban: 11%).

4.3.6 The residual group “other food” accounted for 16% of protein intake in rural India and 18% in urban India, inter-State variation being relatively little.

4.4 Percentage break-up of protein intake by food category: variation with level of living

4.4.1 As MPCE levels rise, the contributions of different food categories to protein intake change. This is shown in Table T13 at all-India level separately for rural and urban sectors, using the same five food groups as were used for Table T12, and the 12 fractile classes of MPCE.

4.4.2 The contribution of cereals to protein intake is seen to fall steadily from 72% in the lowest fractile class (bottom 5% of population ranked by MPCE) to 42% in the highest (top 5%) in rural India and from 68% to 31% in urban India. This fall is balanced by a rise in percentage contribution of all the other food groups with rise in MPCE level. The rise is steepest for milk and milk products: from 3% in the lowest fractile class to 16% in the highest in the rural sector and from 4% to 17% in the urban sector. The contribution of egg, fish and meat, too, climbs quite noticeably across MPCE classes from 2% to 12% in rural India and from 4% to 11% in urban India. The increase is slowest for pulses (rural: 9% to 11%; urban: 10% to 11% in the 11th class but dipping to 10% in the 12th). The variation in contribution of “other food” is more prominent in the urban sector (14% to 31%) than in the rural.

Table T13: Percentage break-up of protein intake by food group for each MPCE fractile class

all-India						
MPCE fractile class	% share of protein intake coming from

4.5 Average fat intake: States and all-India

4.5.1 Table T14 shows per capita and per consumer unit fat intake in rural and urban sectors of India and the major States. Estimates for all States/UTs are available in Table 3B (based on Schedule Type 2) and Tables 3A (based on Schedule Type 1) of Appendix A, separately for each fractile class of MPCE (URP/MMRP).⁸

4.5.2 The average fat intake for the country as a whole was about 46gm per person per day in the rural sector and 58gm in the urban sector. Considerable inter-State variation, however, existed, especially in rural India. In both sectors, per capita intake was lowest in Odisha (rural: 27.1gm; urban: 37.7gm) and Assam (rural: 29.6gm; urban: 39.2gm). The States with highest fat intake were Haryana (rural: 68.6gm; urban: 74.7gm), Gujarat (rural: 61.5gm; urban: 73.1gm) and Punjab (rural: 70.3gm; urban: 69.2gm) and. Urban intake per person

⁸ Tables 3A/3B, besides giving average intake of calories, protein and fat, also give the share of food and of cereals in total expenditure for each MPCE fractile class.

exceeded rural intake by 9gm or more in nine of the major States and by more than 13gm in West Bengal and Jharkhand. Rural intake exceeded urban in only one major State – Punjab.

Table T14: Average daily fat intake per capita and per consumer unit in 2011-12: major States

State	fat intake per day per capita		fat intake per day per consumer unit	
	rural	urban	rural	urban
(1)	(2)	(3)	(4)	(5)
Andhra Pradesh	49.9	55.2	61.7	67.5
Assam	29.6	39.2	35.6	47.9
Bihar	39.2	42.5	47.8	51.4
Chhattisgarh	31.5	42.2	38.7	51.6
Gujarat	61.5	73.1	75.9	89.2
Haryana	68.6	74.7	84.0	91.3
Jharkhand	30.8	44.2	38.1	53.8
Karnataka	50.5	59.8	62.4	73.3
Kerala	50.8	54.6	64.6	69.2
Madhya Pradesh	45.2	55.9	54.9	67.7
Maharashtra	60.1	66.8	74.5	81.7
Odisha	27.1	37.7	33.6	45.9
Punjab	70.3	69.2	86.8	84.9
Rajasthan	61.9	66.7	76.1	81.4
Tamil Nadu	44.5	52.0	55.6	64.5
Uttar Pradesh	42.6	52.8	52.7	64.5
West Bengal	35.2	48.4	43.4	59.6
all-India	46.1	58.0	56.8	71.0

4.6 Average fat intake: variation with level of living

4.6.1 Table T15 shows variation in fat intake per capita and per consumer unit across fractile classes of MPCE formed sectorwise at the all-India level. Details for States and UTs based on Schedule Type 2 data are available in Table 3B of Appendix A and estimates based on Schedule Type 1 in Table 3A of Appendix A.

Table T15: Average daily fat intake per capita and per consumer unit across MPCE fractile classes in 2011-12

MPCE _{MMRP} fractile class	fat intake (gm) per day per capita		fat intake (gm) per day per consumer unit	
	rural	urban	rural	urban
(1)	(2)	(3)	(4)	(5)
1	20.8	26.5	25.9	32.6
2	26.0	34.4	32.5	42.4
3	30.4	39.5	37.7	48.7
4	33.8	44.9	41.7	55.2
5	38.2	50.2	47.1	61.5
6	42.3	54.7	52.0	66.9
7	45.6	58.6	55.9	71.7
8	49.9	63.4	61.0	77.4
9	54.7	69.8	67.3	84.8
10	61.6	75.3	75.8	91.6
11	69.5	86.7	85.6	106.2
12	92.2	99.7	113.3	122.2
all	46.1	58.0	56.8	71.0

4.6.2 The increase in fat intake per capita with rise in MPCE level is seen to be steeper than the corresponding increase for protein intake, discussed in Section 4.2. Per capita fat intake in the top fractile class of the urban sector was about 100gm, more than three times that in the lowest fractile class (about 27gm), while in the rural sector the intake of the top fractile class, at 92gm, was more than four times higher than that of the bottom class (21gm).

4.6.3 In contrast to the remarkable closeness of average protein intake across the rural-urban divide, average urban fat intake is noticeably higher than rural intake in all the fractile classes. Except for the lowest fractile class (bottom 5% of population ranked by MPCE), the difference in per capita fat intake between a rural fractile class and the corresponding urban fractile class is never less than 7.5gm.

Chapter Five

Trends in Nutritional Intake

5.0.1 The 66th round survey used two different schedules in two different sets of households to measure household consumer expenditure, called Sch. Type 1 and Sch. Type 2. Of these, Type 1 used a „30 days“ reference period for all food items while Type 2 used 30 days for some item groups and 7 days for others. For purposes of comparison with data from earlier NSS surveys, it is better to use the data from Sch. Type 1, and not the data from Sch. Type 2, as it is generally agreed that data on food obtained using a „30 days“ reference period are not comparable with data obtained by using a „7 days“ reference period. On the other hand, it is the data from Sch. Type 2 on which the estimates discussed in Chapter Three and Four are based, as Sch. Type 2 is expected to take care of the problems of reporting errors in food data better than Sch. Type 1.

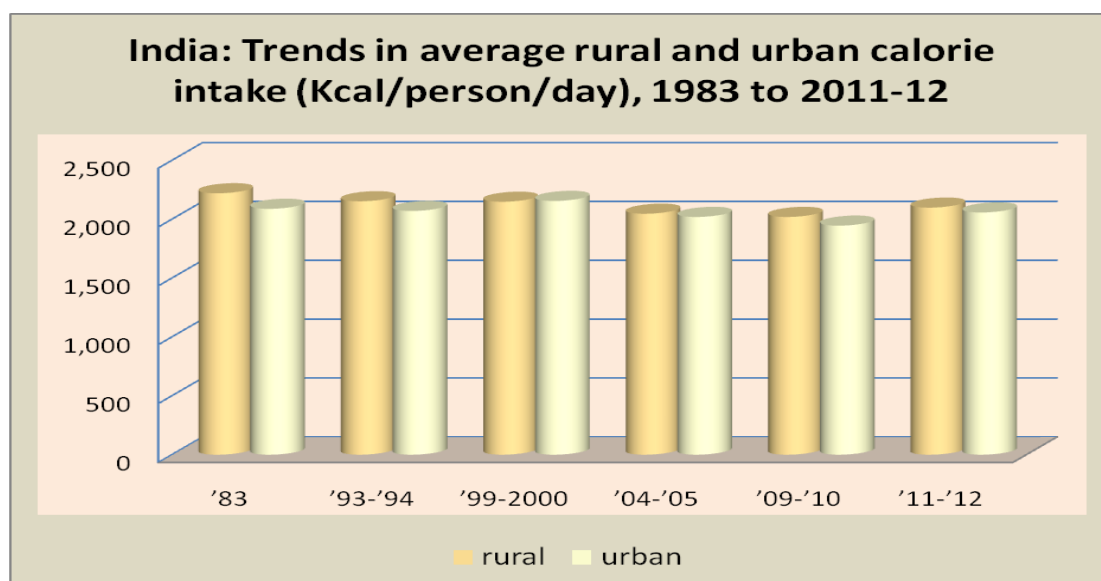

5.1 Trends in average calorie intake: States and all-India

5.1.1 Tables T16R and T16U show estimates of average calorie intake for India and the major States from the 68th round (2011-12) and five other quinquennial surveys of consumer expenditure for which nutrition results were tabulated – the 38th (1983), the 50th (1993-94), the 55th (1999-2000) the 61st (2004-05) and the 66th round (2009-10) surveys.⁹

Table T16R: Estimated per capita calorie intake per day in different years: major States

State	Rural							
	estimated per capita calorie intake (Kcal) per day in							
	'83	'93-'94	'99-2000	'04-'05	'09-'10 Sch. 1	'09-'10 Sch. 2	'11-'12 Sch. 1	'11-'12 Sch. 2

Uttar Pradesh	2399	2307	2327	2200	2064	2181	2436	2548
Uttarakhand	-	-	-	2160	2179	2271	2112	2200
West Bengal	2027	2211	2095	2070	1927	2060	2092	2199
all-India	2221	2153	2149	2047	2020	2147	2099	2233

⁹ For the three major States which were bifurcated in 1999, viz., Bihar, Madhya Pradesh and Uttar Pradesh, the estimates have been shown separately for the parts from '04-'05 onwards, and as composite estimates up to '99-2000.

5.1.2 The all-India rows (leaving out the estimates based on Schedule Type 2 for the last two rounds) show energy intake declining in both sectors after 1999-2000, the decline being sharper in the urban sector, but recovering again to regain a level of about 2100 Kcal per person per day in the rural sector and about 2060 Kcal in the urban in 2011-12.

Table T16U: Estimated per capita calorie intake per day in different years: major States

State	Urban							
	estimated per capita calorie intake (Kcal) per day in							
	'83	'93-'94	'99-2000	'04-'05	'09-'10 Sch. 1	'09-'10 Sch. 2	'11-'12 Sch. 1	'11-'12 Sch. 2

Uttarakhand	-	-	-	2205	1984	2141	2004	2144
West Bengal	2048	2131	2134	2011	1851	2027	2026	2130
all-India	2089	2071	2156	2020	1946	2123	2058	2206

5.1.3 At the level of individual States, a rise in average calorie intake level between 2004-05 and 2011-12 is noted in rural areas of most of the major States. In the urban sector, however, at least three major States show large reductions in average energy intake between these two time points, though admittedly the 2004-05 estimate for Jharkhand appears to be somewhat on the high side.

5.2 Trends in distribution of households by calorie intake level: all-India

5.2.1 Table T17 shows the all-India distribution of rural and urban households over four broad classes of calorie intake per consumer unit for each of the five years 1993-94 (50th round), 1999-2000 (55th round), 2004-05 (61st round), 2009-10 (66th round: Sch. Type 1) and 2011-12 (68th round: Sch. Type 1).

5.2.2 The proportion of households with calorie intake in the <80 class, that is, with energy intake under 2160 (80% of 2700) Kcal per consumer unit per day, which in both sectors increased over the period 1993-94 to 2004-05, is seen to have subsequently declined appreciably to reach about 20% in the rural sector and 23% in the urban.

5.2.3 Among the higher calorie intake classes, the ≥ 120 class – what may be called the over-nourished end – that showed a steady shrinkage in size up to 2009-10, reaching around 16% in both rural and urban sectors – appears to have increased again to over 18% in both sectors.

5.2.4 With the 80-100 category containing 35-36% of households in both sectors in 2011-12 compared to about 29-30% of households in the last decade of the 20th century, and the size of the 100-120 category also registering a definite growth since 1993-94, especially in the rural sector, the distribution of dietary energy intake appears to have experienced a reduction in dispersion compared to the 1990s.

Table T17: Per 1000 distribution of households by level of calorie intake per consumer unit per day: 1993-94 to 2011-12

year	per 1000 no. of RURAL hhs with calorie intake per consumer unit per day*				per 1000 no. of URBAN hhs with calorie intake per consumer unit per day*			
	<80	80-100	100-120	≥ 120	<80	80-100	100-120	≥ 120
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)
1993-94	227	288	230	256	266	306	217	212
1999-2000	258	300	216	225	259	313	221	209
2004-05	276	337	215	172	282	349	212	156
2009-10 (Type 1)	258	362	219	160	277	357	210	156
2011-12 (Type 1)	198	357	257	188	229	352	235	183

*expressed as a percentage of a level of 2700 Kcal per consumer unit per day

5.3 Trends in percentage break-up of calorie intake by food group: all-India

5.3.1 Table T18 shows the percentage break-up of calorie intake over nine food groups – cereals, roots and tubers, sugar and honey, pulses, nuts and oilseeds, vegetables and fruits, meat, eggs and fish, milk and milk products, oils and fats, and miscellaneous food, food products and beverages – for rural and urban India for five years spanning the period 1993-94 to 2011-12.

5.3.2 The share of cereals in total calorie intake from the nine food groups has declined over the 18-year period by nearly 10 percentage points in the rural sector and nearly 7 percentage points in the urban. The share of oils and fats has risen by about 3½ percentage points in both

sectors. The share of milk and milk products has grown by about 1 percentage point in both sectors. The contributions of vegetables and fruits, as well as sugar and honey, appear to be falling over time, especially in urban India, while the contribution of meat, eggs and fish shows a slight rise in rural India.

Table T18: Percentage break-up of calorie consumption over nine food groups: 1993-94 to 2011-12

year	% share of calorie intake from food group								
	cereals	roots & tubers	sugar & honey	pulses, nuts & oilseeds	veg. & fruits	meat, eggs & fish	milk & milk products	oils & fats	misc. food, etc.

Karnataka	55.1	54.2	48.8	49.0	50.4	53.1	53.5	52.2	51.8	51.9
Kerala	50.8	52.4	55.4	52.7	54.6	52.4	55.2	56.7	54.0	56.8
Madhya Pradesh	63.0	58.2	58.8	58.4	61.8	59.8	60.6	58.2	54.1	58.0
Maharashtra	54.8	56.5	55.7	56.2	56.0	55.5	55.9	52.1	52.7	55.2
Odisha	52.7	49.9	48.3	49.7	49.9	57.2	57.8	55.2	52.5	52.8
Punjab	74.7	71.7	66.7	65.4	66.4	61.8	64.8	63.4	60.4	62.0
Rajasthan	79.4	76.9	69.6	67.8	68.4	66.5	70.4	64.0	60.5	62.7
Tamil Nadu	46.8	44.9	44.9	47.3	48.8	48.7	51.7	49.2	50.2	51.1
Uttar Pradesh	70.4	69.7	65.9	60.0	68.2	63.2	62.0	65.1	56.2	66.2
Uttarakhand	-	-	61.6	58.6	60.1	-	-	62.8	55.5	57.2
West Bengal	54.8	51.6	52.0	47.9	51.7	56.6	55.5	55.1	49.0	53.8
all-India	60.2	59.1	57.0	55.0	56.5	57.2	58.5	57.0	53.5	55.7

5.4.2 In rural India as a whole, protein intake per person per day has definitely declined since 1993-94. However, the decline at the all-India level shows signs of flattening out, being only 0.5gm less in 2011-12 compared to 2004-05. In the urban sector the decline (of 1.5gm) in all-India average intake between the two time points 1993-94 and 2011-12 is less marked than in the rural. The decline in rural protein intake since 1993-94 has been prominent in Rajasthan (a fall of 11gm), Haryana (about 10gm), and Punjab (8gm). In both sectors, all the southern States except Karnataka show slight increases in protein intake per person between 1993-94 and 2011-12.

5.4.3 In case of fat intake, on the other hand (Table T20), there is an unmistakable rising trend, with every major State showing a rise. At all-India level the rise has been from 31.4gm per person per day in 1993-94 for the rural population to 41.6gm in 2011-12 and from 42.0gm to 52.5gm for the urban – a rise of over 10gm in both sectors over the 18-year period. In both sectors, all the major States show a rise ranging from 5-6gm to 17-18gm during this period and, in all except three States in each sector, the rise was in fact 9gm or more.

Table T20: Per capita fat intake per day in different years: major States

State	rural					urban

5.5 Trends in break-up of protein intake by food category: all-India

5.5.1 Table T21 shows percentage break-up of protein intake by food group for India as a whole over the period 1993-94 to 2011-12.

5.5.2 Over the 18 years preceding 2011-12, the contribution of cereals to protein intake has fallen by about 7 percentage points in rural India and nearly 6 percentage points in urban India. The fall in the share of cereals has been balanced by slight rises in the shares of the

remaining food groups. The contribution of pulses has risen by less than 1 percentage point in both sectors and that of “egg, fish and meat” by more than 1 percentage point. “Milk and milk products” has seen a rise in share of slightly under 2 percentage points in both rural and urban India. The “other food” category has registered a relatively large rise of over 3 percentage points in the rural sector and a little under 2 percentage points in the urban.

Table T21: Percentage break-up of protein intake by food group: 1993-94 to 2011-12

year	% share of protein intake coming from					all
	cereals	pulses	milk & milk products	egg, fish & meat	other food	
(1)	(2)	(3)	(4)	(5)	(6)	(7)
Rural						
1993-94	69.42	9.76	8.81	3.66	8.35	100
1999-2000	67.43	10.91	9.19	4.04	8.43	100
2004-05	66.37	9.47	9.28	3.98	10.84	100
2009-10	64.87	9.06	10.02	4.04	12.01	100
2011-12	62.45	10.57	10.56	4.73	11.69	100
Urban						
1993-94	59.41	11.54	11.66	5.29	12.10	100
1999-2000	57.03	13.10	12.43	5.98	11.46	100
2004-05	56.16	11.00	12.33	5.47	14.98	100
2009-10	56.39	11.31	13.75	5.59	12.96	100
2011-12	53.69	12.41	13.57	6.39	13.94	100

5.5.3 Statements 8.1, 8.2 and 8.3 show, respectively, per capita energy, protein and fat intake per day in rural and urban sectors of the major States of India for the years 1972-73 (NSS 27th round estimates), 1983 (NSS 38th round), 1993-94 (50th round), 1999-2000 (55th round), 2004-05 (61st round), 2009-10 (66th round), and 2011-12 (68th round). For the 66th and 68th rounds, estimates from both Schedule Type 1 and Schedule Type 2 data are shown. For the three major States which were bifurcated in 1999, viz., Bihar, Madhya Pradesh and Uttar Pradesh, the estimates have been show separately for the parts from 2004-05 onwards, and as composite estimates up to and including 1999-2000.

Chapter Six

Adjusted Nutrient Intake Estimates

6.0.0 As explained in Chapter Two, paragraph 2.1.7, “consumption” of food items by a household, as recorded by the survey, includes not only the actual consumption by the members of the household but also the consumption by non-members – guests or employees – during the reference period, of meals prepared in the household. This is because of the practical difficulty of separating out the quantities and values of individual items used for preparing the meals served to non-members from the household’s reported consumption. (As a general principle, cooked meals purchased from the market for consumption of the members and for guests are also recorded in the purchaser household.) Correspondingly, this method of accounting consumption of non-members also means that consumption of meals by members of a household H in other households gets excluded from the consumption recorded in the schedule canvassed in household H – it is included in the consumption of the household preparing and serving the meals.

6.0.1 Hence, to bring the estimate of nutrient intake level closer to „true“ intake, an adjustment procedure is used. This consists essentially of counting the number of meals *N* served *in* the household to members and non-members during the reference period, dividing *Y*, the nutrient intake worked out from the quantities recorded in the schedule, by *N* to get per meal calorie intake, and multiplying this intake by the actual number of meals reported to be consumed by household members anywhere – at home or away from home – during the reference period.

6.0.2 Note, however, that adjustment of nutrient intake is not possible for the data of Schedule Type 2 as that would require the values of number of meals consumed by household members away from home and the number of meals served by the household to members and non-members during the last 7 days as well as during the last 30 days, whereas only the values for the last 30 days are recorded in the schedule.

6.0.3 This means that adjustment of nutrient intake is possible only for estimates obtained from Schedule Type 1, which, from the 66th round onwards, are being generated only for the purpose of temporal comparison with estimates from the 61st and earlier rounds, where data on food intake had been collected only with a 30-day reference period. It is, of course, arguable that comparisons are best made keeping all procedures unchanged, so unadjusted estimates should continue to be used for comparison purposes. However, it may reasonably be expected that the adjustment procedure would have the effect of redistributing the measured nutrient intakes among households (reducing the intake of households that were net donors of cooked meals and increasing the intake of the net receivers) and would not affect the *average* nutrient intakes at State or all-India level. If this assumption is valid, one may at least use the estimates of average adjusted intake, if not the estimated distributions of intake, for purposes of comparison with the estimates of average intake the earlier rounds, even though the latter are unadjusted.

6.0.4 A look at Tables T22R and T22U, which show both adjusted and unadjusted calorie, protein and fat intake per capita and per consumer unit (all-India) from the 68th round Schedule Type 1 data, reveals, however, that the adjustment procedure has had the effect of reducing average intake of calorie, protein and fat appreciably – more so in the rural sector.

Table T22R: Per capita and per consumer unit intake of calorie, protein and fat per day in each fractile class of MPCE_{URP}

all-India: Rural				Schedule Type 1

all	1746	47.3	35.2	2154	58.3	43.4

6.0.5 The reduction due to adjustment of intake in estimated all-India per capita energy, protein and fat intake is of the order of 15-17% for the rural sector and 5-6% for the urban sector. In both sectors the reduction is greater in the lower fractile classes of MPCE, exceeding 20% in the lowest four classes for the rural sector for all three nutrients.

Table T22U: Per capita and per consumer unit intake of calorie, protein and fat per day in each fractile class of MPCE_{URP}

all-India: Urban			Schedule Type 1

all	1931	52.4	49.7	2364	64.1	60.8

6.0.6 The reduction in averages of nutrient intake brought about by the adjustment procedure appear to be due to non-sampling errors.

6.0.7 Tables T23R and T23U show unadjusted and adjusted all-India estimates of percentage of calorie intake derived from cereals, and of break-up of protein intake by food group.

Table T23R: Percentage of total intake of calorie and protein derived from different groups of food items for households in each fractile class of MPCE_{URP}

*expressed as percentage of a level of 2700 Kcal per consumer unit per day

6.0.9 Given the difference in the all-classes adjusted and unadjusted calorie intakes, it is no surprise that the average adjusted calorie intake is much lower (more so in the rural sector) in the lowest and highest calorie intake classes – the only two open-ended classes.

Table T24U: Percentage break-up of calorie intake over different food groups, and average intake of calorie, protein and fat per consumer unit per day, separately for households in different ranges of calorie intake (per consumer unit per day)

all-India Urban												Schedule Type 1

all	317	108	130	125	102	69	100	48	1000

6.0.11 The distributions show a marked downward shift; in particular, the lowest calorie intake class swells considerably in size after adjustment in both rural and urban sectors. This phenomenon is observed for every MPCE class.

6.0.12 In view of the downward shift of measured nutrient intake as a consequence of adjustment, apparently due to non-sampling errors, it does not appear that changes in nutrient intake over different years can be usefully studied by comparing estimates of (unadjusted) nutrient intake from earlier NSS rounds with estimates of adjusted intake from the 68th round. It would, rather, be preferable to use the unadjusted estimates from the 68th round for this purpose. This is what has been done in Chapter Five.

6.0.13 In Appendix B, State and all-India estimates from Schedule Type 1 of adjusted nutrient intake (corresponding to Tables T22 to T26 above) are shown in Tables 3A(Adj) to 7A(Adj), and corresponding estimates of unadjusted nutrient intake are shown in Appendix A, Tables 3A to 7A. It may be noted that it is the latter that are presented in the discussion of trends in nutrient intake in Chapter Five.

Chapter Seven

A Note on the Sources of Meals Consumed

7.0.0 Most meals consumed by Indians are prepared in their own households, but not all – some are obtained from hotels or restaurants on payment, some as wages in kind or perquisites from employers, some free from friends or relatives or as charity, and some by schoolchildren from school. Data collected personwise on the break-up of meals taken by source enable the estimation – at national and State level – of the break-up of meals consumed per household over these sources by fractile class of MPCE (Table 1, Appendix A) and also (Table 2, Appendix A) of the average number of meals consumed per person by age group and sex. (See also Statements 1 and 2 at the end of this chapter.)

Table T27: Average no. of meals taken in 30 days by fractile class of MPCE

fractile class of MPCE	rural			urban			all-India
	av. no. of meals taken per hh in 30 days	av. hh size	av. no. of meals taken per person in 30 days	av. no. of meals taken per hh in 30 days	av. hh size	av. no. of meals taken per person in 30 days

7.0.1 Table T27 shows that the average number of meals taken per person (from all sources) does not vary appreciably with MPCE level, implying that the differences in average number of meals taken per household across MPCE classes are due to variation in average household size with MPCE. It also suggests, in view of the findings on variation in nutrient intake with MPCE level discussed in Sections 3.2, 4.2 and 4.6, that wide differences exist in *per meal* intake of nutrients across fractile classes of MPCE.

7.0.2 Table T28 shows the percentage break-up of meals by source, separately for males and females, by sector. The proportion of meals received from sources other than home was highest for urban males (5.6%), followed by rural males (4.7%), rural females (4.1%), and urban females (3.7%). The percentage of meals received from school/balwadi was appreciably higher in the rural sector (2.6-2.7%) compared to the urban (about 1%) while the percentages of free meals received from employer and from other sources were both slightly higher in the urban sector.

Table T28: Percentage break-up of number of meals taken by source of meals for males and females

source of meals		all-India			
		percentage of total no. of meals consumed			
		rural		urban	
(1)	(2)	(3)	(4)	(5)	
not at home	free, from school/ balwadi	2.7	2.6	0.9	1.0
	free*, from employer	0.2	0.1	0.4	0.1
	free, from other sources	1.1	1.3	1.5	1.5
	free, total	4.0	4.0	2.9	2.7
	on payment	0.7	0.1	2.7	1.0
	total	4.7	4.1	5.6	3.7
at home		95.3	95.9	94.4	96.3
all		100.0	100.0	100.0	100.0

*that is, not against payment, though the meals might themselves be in the nature of payment in kind for services rendered.

7.0.3 Table T29 shows the average number of meals received from school during a period of 30 days per male and per female for three age-groups: 0-4, 5-9 and 10-14, and for the whole population, in rural and urban India. The averages have been computed taking the entire population of the sex and age-group in the denominator and not only schoolgoing children. The average numbers of meals received from all sources by each sex and age-group are shown in parentheses.

Table T29: Average no. of meals received from school, balwadi, etc. per male and female of selected age groups in 30 days

age group		all-India			
		average no. of meals received in 30 days from school, balwadi, etc.			
		rural		urban	
(1)	(2)	(3)	(4)	(5)	
0-4	1.6 (74)	1.7 (73)	0.6 (71)	0.7 (71)	
5-9	8.5 (86)	9.0 (86)	3.3 (82)	3.6 (83)	
10-14	7.1 (82)	7.7 (82)	2.9 (78)	3.6 (78)	
all ages	2.0 (75)	2.0 (75)	0.7 (71)	0.7 (71)	

Figures in parentheses show total no. of meals received in 30 days from all sources.

7.0.4 The highest numbers of school meals were, as Table T29 shows, received by rural children in the age-group 5-9 (8.5 meals per boy and 9 meals per girl), followed by rural children in the 10-14 age-group (7.1 meals per boy and 7.7 meals per girl). The rural figure is more than double the corresponding urban figure for each age-sex category. There is a perceptible gender difference in that the number of meals per girl is usually a little higher than that for boys. It is also clear from the figures in parentheses that the higher number of meals consumed in a month by children in the age-groups 5-9 and 10-14 compared to persons in other age-groups are due to the meals these children receive from school.

Statement 1: Average number of meals consumed per household at home and obtained elsewhere on payment or free from specific sources (as perquisite, from school, etc.) during a period of 30 days for each fractile class of MPCE_{MMRP}

Schedule Type 2

Sample Design and Estimation Procedure

Sample Design and Estimation Procedure of NSS 68th Round

1. Introduction

1.1 The National Sample Survey (NSS), set up by the Government of India in 1950 to collect socio-economic data employing scientific sampling methods, conducted its 68th round during the period July 2011 - June 2012. The subjects covered were 'Household Consumer Expenditure' and 'Employment and Unemployment'. The last survey on these subjects was conducted in the 66th round of NSS (2009-10) which was the eighth survey in the quinquennial series of surveys on 'Household Consumer Expenditure' and 'Employment and Unemployment'. The 68th round survey was similar to the quinquennial series as far as subjects of enquiry, design, questionnaires and sample sizes were concerned.

2. Outline of survey programme

2.1 **Geographical coverage:** The survey covered the whole of the Indian Union *except* (i) interior villages of Nagaland situated beyond five km of any bus route and (ii) villages in Andaman and Nicobar Islands which remain inaccessible throughout the year.

2.2 **Period of survey and work programme:** The period of survey was of one year duration starting on 1st July 2011 and ending on 30th June 2012. The survey period was divided into four sub-rounds of three months' duration each as follows:

sub-round 1 :	July - Sept 2011
sub-round 2 :	Oct - Dec 2011
sub-round 3 :	Jan - March 2012
sub-round 4 :	April - June 2012

To ensure uniform spread of sample FSUs over the entire survey period, equal numbers of sample villages/ blocks (FSUs) were allotted for survey in each of these four sub-rounds, and attempts were made to survey each FSU during the sub-round to which it was allotted. However, because of the arduous field conditions, this restriction was not strictly enforced in Andaman and Nicobar Islands, Lakshadweep, and rural areas of Arunachal Pradesh and Nagaland.

2.3 **Schedules of enquiry:** The following schedules of enquiry were canvassed:

Schedule 0.0	: List of households
Schedule 1.0	: Consumer expenditure
Schedule 10	: Employment and unemployment

Two versions of Schedule 1.0, using different reference period systems, and called Schedule Type 1 and Schedule Type 2, were canvassed in this round in roughly equal numbers of sample households.

2.4 Participation of States: In this round all the States and Union Territories except Andaman & Nicobar Islands, Chandigarh, Dadra & Nagar Haveli, and Lakshadweep participated. The ratio of the size of the State sample (the sample in the survey conducted by the State/UT) to the Central sample size varied across States/UTs as follows:

Nagaland (U)	: triple
Andhra Pradesh, J & K , Manipur , Delhi	: double
Maharashtra (U) & Kerala	: one and a half
Gujarat	: half
Remaining States/ UTs	: equal

3. Sample Design

3.1 Outline of sample design: A stratified multi-stage design was adopted for the 68th round survey. The first stage units (FSU) were the 2001 Population Census villages (*panchayat* wards in case of Kerala) in the rural sector and Urban Frame Survey (UFS) blocks in the urban sector. In both sectors the ultimate stage units were households. When a large FSU was selected, there was an intermediate stage of sampling: the FSU was partitioned into a suitable number of hamlet-groups/ sub-blocks and two of these were selected to provide the households which would form the sampling frame for ultimate-stage sample selection.

3.2 Sampling frame for first-stage units: For the rural sector, the list of 2001 Census villages (henceforth the term ‘village’ will mean *panchayat* wards in case of Kerala) constituted the sampling frame. For the urban sector, the list of UFS blocks (UFS 2007-12) was the sampling frame.

3.3 Stratification: Within each district of a State/UT, generally speaking, two basic strata were formed: i) a rural stratum comprising all rural areas of the district and (ii) an urban stratum comprising all urban areas of the district. If, however, within the urban areas of a district, there were million-plus cities (towns with population 10 lakhs or more as per Population Census 2001), each such city formed a separate basic urban stratum and the remaining urban area of the district, another basic urban stratum.

3.4 Sub-stratification:

Rural sector r: If ‘r’ was the sample size allocated for a rural stratum, the number of sub-strata formed was ‘r/4’. The villages within a district as per frame were first arranged in ascending order of population. Then cut-off points were marked off in this list demarcating sub-strata 1 to ‘r/4’ in such a way that each sub-stratum comprised a group of villages of the arranged frame and had more or less the same population.

Urban sector: If 'u' was the sample size for an urban stratum, the number of sub-strata formed was 'u/4'. If u/4 was more than 1, formation of 2 or more sub-strata was required. This was done by first arranging the towns in ascending order of number of households in the town as per UFS phase 2007-12 and then arranging the IV units of each town and the blocks within each IV unit in ascending order of their numbers. From this arranged frame of UFS blocks of all the towns/million-plus cities of a stratum, 'u/4' sub-strata were formed in such a way that each sub-stratum had more or less the same number of households as per UFS 2007-12.

3.5 Total sample size (FSUs): 12784 FSUs were allocated for the Central sample at all-India level and 14772 FSUs for the State sample.

3.6 Allocation of total sample to States and UTs: The total number of sample FSUs was allocated to the States and UTs in proportion to population as per Census 2001 as far as possible given the resource availability in terms of number of field investigators, subject to a minimum sample allocation to each State/UT.

3.7 Allocation of State/UT level sample to rural and urban sectors: State/UT-level sample size was allocated between rural and urban sectors in proportion to population as per Census 2001 with double weightage to the urban sector. However, if such weighted allocation resulted in too large a sample size for the urban sector, the allocation for bigger states like Maharashtra, Tamil Nadu, etc. was restricted to that of the rural sector. A minimum of 16 FSUs (minimum 8 each for rural and urban sector separately) was allocated to each State/UT.

3.8 Allocation to strata and sub-strata: Within each sector of a State/UT, the sample size was allocated to the different strata/sub-strata in proportion to the population as per Census 2001. Allocations at stratum level were adjusted to multiples of 4 with a minimum sample size of 4. Allocation for each sub-stratum was 4. Equal numbers of sample FSUs were allotted to the four sub-rounds.

3.9 Selection of FSUs

3.9.1 For the rural sector, from each sub-stratum, sample villages were selected with Probability Proportional to Size With Replacement (PPSWR), size being the population of the village as per Census 2001.

3.9.2 For the urban sector, UFS 2007-12 phase was used for all towns and cities and FSUs were selected from each sub-stratum by Simple Random Sampling Without Replacement (SRSWOR).

3.9.3 Both rural and urban samples were drawn in the form of two independent sub-samples and equal sample sizes were allocated to the four sub-rounds.

3.10 Selection of hamlet-groups/sub-blocks

3.10.1 **Number of hamlet-groups/ sub-blocks formed:** After identification of the boundaries of the FSU, it was first determined whether listing was to be done in the whole sample FSU or not. In case the population of the selected FSU was found to be 1200 or more, it was divided into a suitable number (say, D) of parts of more or less equal population – the parts being called ‘hamlet-groups’ in the rural sector and ‘sub-blocks’ in the urban sector. D was determined as the table below shows.

approx. present population of the sample FSU	no. of hamlet-groups/ sub-blocks formed
less than 1200	1*
1200 to 1799	3
1800 to 2399	4
2400 to 2999	5
3000 to 3599	6
...and so on	

*no hamlet-groups/sub-blocks formed

3.10.2 For rural areas of Himachal Pradesh, Sikkim, Uttarakhand (except for 4 districts: Dehradun (P), Nainital (P), Hardwar and Udham Singh Nagar), Poonch, Rajouri, Udhampur, Doda, Leh (Ladakh), Kargil districts of Jammu and Kashmir, and Idukki district of Kerala, the number of hamlet-groups formed was as follows:

approx. present population of the sample FSU	no. of hamlet-groups/ sub-blocks formed
less than 600	1*
600 to 899	3
900 to 1199	4
1200 to 1499	5
...and so on	

*no hamlet-groups/sub-blocks formed

3.10.3 Selection of hamlet-groups/ sub-blocks to form the frame for sampling of households:

Once a large FSU had been divided into the required number of sub-FSUs (hamlet-groups or sub-blocks), two of these sub-FSUs were selected in the following manner – the one with the largest population was purposively selected, and another was randomly selected from the remaining sub-FSUs by Simple Random Sampling (SRS). Listing and selection of the households was done independently in the two selected sub-FSUs.

3.11 Formation of second-stage strata and allocation of households

3.11.1 In each selected village, some households were identified as affluent on the basis of a number of criteria such as possession of certain durables or assets. If there were more than 10 such

households, the 10 most affluent of these were identified as the ‘relatively affluent households’ of the village.

3.11.2 For urban areas, two cut-off points ‘A’ and ‘B’ (in Rs.) were determined for each NSS state-region in such a way that the top 10% of the population had MPCE more than ‘B’ and bottom 30% of the population had MPCE less than ‘A’ in 2009-10, as estimated by the NSS 66th round survey.

3.11.3 Households listed in the selected FSU/sub-FSU were stratified into three second-stage strata (SSS). Composition of the SSS and number of households planned to be surveyed from different SSS were as follows:

SSS	composition of SSS	number of households surveyed for Sch.1.0, Type 1/ Type 2	
		FSU without hg/sb formation	FSU with hg/sb formation (for each hg/sb)
Rural			
SSS 1:	relatively affluent households	2	1
SSS 2:	of the remaining, households having principal earning from non- agricultural activity	4	2
SSS 3:	other households	2	1
Urban			
SSS 1:	households having MPCE of top 10% of urban population (MPCE > B)	2	1
SSS 2:	households having MPCE of middle 60% of urban population ($A \leq MPCE \leq B$)	4	2
SSS 3:	households having MPCE of bottom 30% of urban population (MPCE < A)	2	1

3.12 **Selection of households:** From each SSS, the sample households were selected by Simple Random Sampling Without Replacement.

4. Estimation Procedure

4.1 Notations

s = subscript for stratum

t = subscript for sub-stratum

m = subscript for sub-sample (m = 1, 2)

i = subscript for FSU [village (*panchayat* ward)/ block]

d = subscript for hamlet-group/ sub-block (d = 1, 2)

j = subscript for second-stage stratum in an FSU/ sub-FSU [j = 1, 2 or 3]

k = subscript for sample household in a particular second-stage stratum within an FSU/ sub-FSU

D = total number of sub-FSUs (hg's/ sb's) formed in the sample FSU

$D^* = 0$ if $D = 1$

= (D – 1) for FSUs with $D > 1$

N = total number of FSUs in an urban sub-stratum

Z = total size of a rural sub-stratum (= sum of sizes of all the FSUs of the sub-stratum)

z = size of sample village used for selection

n = number of sample FSUs surveyed including 'zero cases' but excluding casualties for a particular sub-sample and sub-stratum

H = total number of households listed in a second-stage stratum of an FSU/ sub-FSU

h = number of households surveyed in a second-stage stratum of an FSU/ sub-FSU

x, y = observed value of characteristics x, y under estimation

\hat{X} , \hat{Y} = estimate of population total X, Y for the characteristics x, y

In terms of the above symbols,

$y_{stmidjk}$ = observed value of the characteristic y for the k-th household in the j-th second stage stratum of the d-th hg/ sb (d = 1, 2) of the i-th FSU belonging to the m-th sub-sample for the t-th sub-stratum of s-th stratum.

However, for ease of understanding, a few symbols have been suppressed in the following paragraphs when they are obvious.

4.2 Formulae for estimation of aggregates for a particular sub-sample and stratum \times sub-stratum

4.2.1 Rural

(i) For j-th second stage stratum of a stratum \times sub-stratum:

$$\hat{Y}_j = \frac{Z}{n_j} \sum_{i=1}^{n_j} \frac{1}{z_i} \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + D_i^* \times \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all second-stage strata combined:

$$\hat{Y} = \sum_j \hat{Y}_j$$

(iii) Estimate for a stratum (\hat{Y}_s) is obtained by adding sub-stratum level estimates (\hat{Y}_{st}).

4.2.2 Urban

(i) For j-th second stage stratum of a stratum \times sub-stratum:

$$\hat{Y}_j = \frac{N}{n_j} \sum_{i=1}^{n_j} \left[\frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + D_i^* \times \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all second-stage strata combined:

$$\hat{Y} = \sum_j \hat{Y}_j$$

(iii) Estimate for a stratum (\hat{Y}_s) is obtained by adding sub-stratum level estimates (\hat{Y}_{st}).

4.3 Overall estimate for aggregates

Overall estimate for aggregates for a stratum (\hat{Y}_s) based on two sub-samples is obtained as:

$$\hat{Y}_s = \frac{1}{2} \sum_{m=1}^2 \hat{Y}_{sm}$$

4.4 Overall estimate of aggregates at State/UT/all-India level:

The overall estimate \hat{Y} at the State/ UT/ all-India level is obtained by summing the stratum estimates \hat{Y}_s over all strata belonging to the State/ UT/ all-India.

4.5 Estimates of Ratios

Let \hat{Y} and \hat{X} be the overall estimates of the aggregates Y and X for two characteristics y and x respectively at the State/ UT/ all-India level.

Then the combined ratio estimate (\hat{R}) of the ratio ($R = \frac{Y}{X}$) is obtained as $\hat{R} = \frac{\hat{Y}}{\hat{X}}$.

4.6 Estimates of Error

The estimated variances of the above estimates are as follows:

4.6.1 For aggregate \hat{Y} :

$V\hat{a}r(\hat{Y}) = \sum_s V\hat{a}r(\hat{Y}_s)$ where $V\hat{a}r(\hat{Y}_s)$ is given by

$V\hat{a}r(\hat{Y}_s) = \sum_t \frac{1}{4} (\hat{Y}_{st1} - \hat{Y}_{st2})^2$, where \hat{Y}_{st1} and \hat{Y}_{st2} are the estimates for sub-sample 1 and sub-sample 2 respectively for stratum 's' and sub-stratum 't'.

4.6.2 For ratio \hat{R} :

$$M\hat{S}E(\hat{R}) = \frac{1}{4\hat{X}^2} \sum_s \sum_t \left[(\hat{Y}_{st1} - \hat{Y}_{st2})^2 + \hat{R}^2 (\hat{X}_{st1} - \hat{X}_{st2})^2 - 2\hat{R} (\hat{Y}_{st1} - \hat{Y}_{st2}) (\hat{X}_{st1} - \hat{X}_{st2}) \right]$$

4.6.3 Estimates of Relative Standard Error (RSE):

$$R\hat{S}E(\hat{Y}) = \frac{\sqrt{V\hat{a}r(\hat{Y})}}{\hat{Y}} \times 100$$

$$R\hat{S}E(\hat{R}) = \frac{\sqrt{M\hat{S}E(\hat{R})}}{\hat{R}} \times 100$$

5. Multipliers

The formulae for multipliers at stratum/ sub-stratum/ second-stage stratum level for a sub-sample and schedule type are given below:

sector	multiplier	
	hg/sb 1	hg/sb 2
Urban	$\frac{N_s}{n_{sm}}$	$\frac{N_s}{n_{sm}} D_{smi}^*$
rural	$\frac{Z_{st}}{n_{stmj}} \times \frac{1}{z_{stmi}} \times \frac{H_{stmi1j}}{h_{stmi1j}}$	$\frac{Z_{st}}{n_{stmj}} \times \frac{1}{z_{stmi}} \times D_{stmi}^* \times \frac{H_{stmi2j}}{h_{stmi2j}}$
Urban	$\frac{N_s}{n_{smj}} \times \frac{H_{smi1j}}{h_{smi1j}}$	$\frac{N_s}{n_{smj}} \times D_{smi}^* \times \frac{H_{smi2j}}{h_{smi2j}}$

(j = 1, 2, 3)

Note:

- (i) For estimating any characteristic for any domain not specifically considered in sample design, indicator variable is used.
- (ii) Multipliers are computed on the basis of information available in the listing schedule irrespective of any misclassification observed between the listing schedule and detailed enquiry schedule.
- (iii) For estimating number of villages possessing a characteristic, $D_{stmi}^* = 0$ in the relevant multipliers and there is only one multiplier for the village.
