Acknowledgement

At the outset, the study team under the leadership of Dr. Nivedita P. Haran, IAS (Retd.), Director of the Centre for Innovations in Public Systems (CIPS), is grateful to the CSC e-Governance Services India Ltd., Ministry of Communications & Information Technology, Govt. of India, for awarding the cited study to CIPS.

The CIPS team wishes to express its sincere gratitude to Dr. Dinesh Kumar Tyagi, IAS, Chief Executive Officer of the CSC e-Governance Services India Ltd., Shri. J. Rajakishore, Assistant Vice President of the CSC e-Governance Services India Ltd, Ms. Surbhi Sharma, Assistant Manager of the CSC e-Governance Services India Ltd. and to other members. Without their unstinted encouragement, support, suggestions and liberal help, the study would not have been a success. They readily accepted the requests of varied nature from the study team at various stages of the assessment. They extended due guidance, offered valuable suggestions on fine-tuning the study focus, helped in the review of the research instruments.

The study team is also thankful to the beneficiaries from different States of the country for sharing data and inputs and lending due support for the conduct of the survey. Thanks are also due from the study team to the Village Level Entrepreneurs (VLEs) who extended due cooperation for the conduct of the survey and also willingly shared their views, opinions, concerns, suggestions and ideas.

Finally, the study team acknowledges the support it received from various officials at CIPS for the smooth and successful conduct of the study.

Executive Summary

An "Impact Assessment Study of the Digital Saksharta Abhiyan under National Digital Literacy Mission" was initiated in November 2016 by Centre for Innovations in Public Systems (CIPS), Hyderabad, Telangana with the sponsorship of the Common Service Centre e-Governance Services India Ltd. Ministry of Communications and Information Technology, Govt. of India. A framework was developed for this study which outlines a methodology for impact assessment, provides the rationale for the methodology and presents the results of assessment of impact of the training provided by CSC e-Governance Services India Ltd. to various respondents from rural corners across the country.

The framework proposed in the report was used to assess the impact of the training programme provided by the CSC e-Governance Services India Ltd., Ministry of Communications and Information Technology, Government of India. The proposed framework focuses on the idea of measuring the digital literacy of different respondents and takes a balanced approach to perform both quantitative and qualitative analysis. It recognizes that some part of the responses received for each respondent are quantitative while other parts need to be assessed qualitatively. The training programme was analyzed by designing an online structured questionnaire and collecting data from the respondents through telephonic survey. The framework aims to measure the impact and understand processes that can explain the nature and quantum of impact. It also identifies the possible shortcomings which when corrected can increase the efficacy of any similar programme in future.

The framework was used to make detailed assessments of six mature wide scope sub-sections representing different types of information pertaining to the training programme conducted. The sections are – Socio-economic background of the trainee, Computer skills, Mobile usage, Technology awareness, Training logistics and Overall impact. The assessment involved a

systematic survey of the respondents conducted by CIPS in a professional manner. A sample of 50,000 beneficiaries from 30 States have been selected from the pool of 5,74,975 at the rate of approximately nine percent of the data received for each State. The data pertained to beneficiaries who have undergone the training programme and received certificate. However, the mentioned rate is under achieved for the states of Kerala, Karnataka and Maharashtra. It was informed that in the case of Kerala, the state already had a digital literacy programme and districts that the state wished to cover, faced lack of connectivity. This led to lower number of certified beneficiaries while conducting the telephonic survey. For the other two states, the number of beneficiaries surveyed is lower than the targeted level because many of the trainees had not been issued the certificate when the telephonic survey was conducted due to the absence of Aadhar card which is mandatory for writing the exam and getting the certificate.

The data from 50,000 selected respondents from 30 States was collected systematically. The states were categorized to six zones, viz., North, South, East, West, Central and North-East. The responses clearly encapsulated the experience of respondents with the use of the technology, computer and mobile as well as with the infrastructure and impact of the training. The telephonic survey covered 43 questions grouped under 6 sections on which impact was being assessed. The responses for each section was analyzed and statistical significance of the difference was evaluated.

Study results show that respondents who have undergone the training programme have indicated an overwhelming positive improvement of the training programme in their digital literacy. Their preference is backed with the identification of areas where concrete benefits have accrued to them. Awareness levels, engagement levels with governance, ease of communication and levels of empowerment seem to have improved with the programme.

A composite score which could be compared across the States was computed from a rating of each question on a list of several common attributes. Respondents were also asked to rank the attributes based on a scale. Using user assigned importance to different attributes, a weighted composite score was calculated for each zone. The difference in the composite score among the zones indicate the degree of perceived impact.

There is considerable variability in the composite scores (represents an overall assessment) across six zones. In general, these ratings substantiate well with the data collected through an independent set of questions. The approach of assessing impact on different respondents, using multiple dimensions and a mix of direct and indirect measurements stands validated. The methodology produces an assessment which enables a ranking of the States within a particular zone and the ranking of the zones according to the degree of overall perceived impact. This can be equated to a measure of success. The analysis can provide a basis for go-no-go decisions in initiating similar training programmes.

Limitations of the study

The study was exploratory in nature. While the difference between the sample size and the population size is found to be statistically significant, selection of a larger sample size would have ensured greater accuracy in terms of analysis of the data for the respondents.

The overall impact of the training programme should be seen in the context of the five sections of the questionnaire that was designed for impact analysis. Keeping in mind the wide reach and scope of activities of the training programme, it would be hasty to generalize the overall conclusions of impact assessment from this study. More insights need to be drawn from a larger sample to generalize the conclusions.

The primary objective of the study was to measure the impact of the training programme on the digital literacy of the respondents. Further studies need to be undertaken to explain the variation in impact on various dimensions, viz., and difference across locations for the same training programme. Studies could also be undertaken to understand the effectiveness of different delivery models and implementation modalities such as the use of public private partnerships. More data (quantitative as well as qualitative) will need to be collected to undertake such studies.

Section I gives a brief background about the Digital India programme. Section II presents a brief overview of the DISHA project and explains the context and objective of the study. This section also provides a snapshot of each of the 30 States on the responses that have been collected from the respondents. Section III describes the research methodology in terms of data collection, preparation of an online questionnaire, collection of data and specifies the tools and techniques used for the study. In Section IV, frequency distribution tables have been prepared for all the six zones on each of the question specified in the questionnaire. Section V presents a comparative analysis both for the zones and within the zones for specific dimensions. This section also covers the impact of the training programme on the beneficiaries in terms of using digital devices and analyses a broader impact on the society. Section VI brings out the challenges faced during the study and Section VII briefly states the possible way forward.

Recommendations

In spite of the few shortcomings noticed, the DISHA programme has reached out to a sizable number of persons from the young and middle-age groups and has provided basic familiarity with digital technology. The participation of women, almost on a 50:50 basis is truly heartening. In general, and specifically in certain states, the DISHA programme has had a

perceptible positive impact. Based on the data analysis certain specific suggestions can be made to recommend modifications or improvements in future. Apart from drawing out the factors that could help make the programme more efficacious, it also acts as a beacon for future guidance. The suggestions and recommendations are divided into Short Term and Long Term.

Short Term

1. Need for Aadhar-seeding may be a necessary condition for the enrolment into the training programme.
2. The CSC and/or VLE may be required to hand-hold the applicant to obtain an Aadhar card, thereby making the training enrolment a conduit for Aadhar inclusion.
3. Providing a personal mobile number during enrolment need not be mandatory as applicants, especially female applicants, are wary about disclosing their mobile numbers, as these can be misused. Some other mode may be devised to verify trainees' identity.
4. Future programmes that aim at digital literacy need to target the rural areas and small towns more determinedly than the cosmopolitan areas.
5. Future programmes should link into curriculum the computer courses in high schools (Class 8 to 12). This will provide a natural link between the elders attending such training with the youngsters (often children and the grand kids) from the same households.
6. Wider usage of open source software is also strongly recommended. Lessons from states that have done well in this respect may be replicated.

7. The curriculum needs to have more hands-on experience, especially in online money transfer, e-Wallets, e-Banking, e-Mailing, managing digital locker and digital signature, etc.
8. There needs to be higher accountability of the CSC/VLE. This will ensure weeding out of the fly-by-night operators who take up the work only to make a fast buck.
9. For this reason and to encourage local entrepreneurship, the training work may be assigned to the educated youth from the same or surrounding panchayats.
10. Women SHGs may also be encouraged to take up training work as CSC/VLE. This will encourage more women to opt for the training programme.
11. The study came across such anomaly where illiterate persons were desirous of attaining digital literacy. It is, therefore, recommended that future digital literacy programmes may also provide the option of a minimum hours of literacy lessons (40 hours). By doing so large swathes of adult illiterates in some parts of the country can become literate.
12. The CSCs may maintain a master list of all those with digital proficiency in that village or panchayat. Those without digital literacy can seek the help of such persons from the master list on payment basis. This would be a win-win for all.
13. An Interactive Voice Response (IVR) system can be designed during the training to collect the data from the beneficiaries in order to assess the impact of the training programme. Measurement instruments may be translated into local languages of the regions where the training programme is implemented.
14. An attempt can be made to quantify the cost incurred of accessing the training programme. The cost can be calculated as the number of trips made to a centre to complete the training programme being offered multiplied by the cost of making each

trip. Wage loss incurred due to travel time and waiting time can also be calculated.

This can help gauge the cost-effectiveness of the training programme.

Long term

India as a country is one of the fastest growing economies with two-third of the population in the below 30 age group. In order to make the best use of the demographic dividend, it is necessary to ensure universal primary literacy coupled with digital literacy. However, the quality of education being below par with high drop-out rates, there are a large number of children who get access neither to primary schooling, nor digital education. Most of these children are from the most vulnerable and economically weaker families, migrant families, Adivasi families and urban slum dwellers.

To make the digital literacy programme genuinely successful and effective, such vulnerable children should not be allowed to fall through the crack. A targeted effort is needed to reach out to such children. The high level of inequalities – economic and social – often fails to reach those below the bottom of the pyramid since they are unseen and unheard. At the same time these children will grow up in a digital world that demands digital proficiency. Hence the following long-term suggestions have been put forward:

1. Future digital literacy programmes need to maintain a closer supervision on the VLEs to prevent the possibility of fraud and misuse.
2. A provision for mid-programme review to detect any aberrations before it is too late would make the programme more cost-effective. Based on the response, mid-term corrections can be made. This will make the trainees more engaged and keep the VLEs alert.
3. There is need to conduct a base line study on the digital profile of the population and digital aspirations. The study can help identify the population that is disinterested and

skeptical about digital technology and is 60 years plus; Government or other programmes need not, at least in the first instance, target this group. At the other end of the spectrum are the digital enthusiasts, who fiendishly learn up the latest technology regardless of training programmes. Finally, the group in the middle who range from the inquisitive to indifferent; this is the group to be targeted, Government may commission a study urgently to gather digital-proclivity of India's population.

4. Such a study as mentioned above would be of interest not only to policy makers but also to the corporate world as such a study would provide them with a fairly accurate picture of the profile, demands, needs and propensities of their target group(s).

I. Background

Digital India programme is one of the flagship schemes of the Government of India which envisages to transform the country into a digitally empowered society and a knowledge economy. The prime motive of this intervention is to give a facelift to the entire ecosystem of public services through effective usage of information technology.

The 3 key vision areas of the programme being:

- Digital Infrastructure as a core utility to every citizen
- Governance and services on demand
- Digital Empowerment of citizens

This is an umbrella programme which cuts across multiple Government Ministries/ Departments. A whole lot of ideas and thoughts are woven together with a comprehensive vision, so that each one of them can be implemented as a part of a larger goal. This is to be implemented by the Government as a whole for which the Ministry of Electronics and Information Technology (MeitY) is the facilitator.

Digital India is intended to provide the much-needed thrust to the 9 pillars of growth areas, they being:

1. Broadband Highways
2. Universal Access to Mobile Connectivity
3. Public Internet Access Programme
4. e-Governance: Reforming Government through Technology
5. e-Kranti - Electronic Delivery of Services
6. Information for All
7. Electronics Manufacturing

8. IT for Jobs
9. Early Harvest Programmes

“We want to have one mission and one target: Take the nation forward- Digitally, and Economically”

- Narendra Modi, Prime Minister of India

‘One person in every household should be Digitally Literate’, this is one of the major components of Hon. Prime Ministers’ vision of Digital India.

In line with these 3 vision areas and 9 pillars, the Ministry of Electronics and Information Technology (MeitY), Govt. of India has come up with an idea of making at least a person from each household Digitally Literate. To achieve this, Common Service Centre (CSC) e-Governance Services India Ltd had been entrusted to drive Digital Saksharta Abhiyan (DISHA).

II. Introduction

2.1. Overview of the DISHA Project

“Digital Literacy is the ability of individuals and communities to understand and use digital technologies for meaningful actions within life situations”

The Digital Saksharta Abhiyan (DISHA) or National Digital Literacy Mission (NDLM) Scheme has been devised in the year 2014 to provide IT training to non-IT literate citizens in the community through programmatic intervention. In a move to fulfill this mission, DISHA underscores the active and effective participation of people in the democratic and developmental process and enhance their livelihood.

In this context, Ministry of Communications and Information Technology, Govt. of India in collaboration with the Common Service Centre (CSC) e-Governance Services India Ltd., Govt. of India began to train people in every eligible household in selected blocks in each State/UT in order to enable them to use IT and related applications.

Under this scheme, altogether 52.5 lakh persons, including Anganwadi and ASHA workers and authorized ration dealers, have been trained in all the States/UTs across the country. The mission of DISHA has been to make the citizens IT literate so as to enable them to actively and effectively participate in the democratic and developmental process and also enhance their livelihood.

Digital Saksharta Abhiyan (DISHA)

DIGITAL LITERACY IS THE ABILITY OF INDIVIDUALS AND COMMUNITIES TO UNDERSTAND AND USE DIGITAL TECHNOLOGIES FOR MEANINGFUL ACTIONS WITHIN LIFE SITUATIONS

Key Facts

To make a person IT literate, so that he/ she can operate digital devices

Non-IT literates - Illiterates are eligible; 14-60 yrs

Official Languages of India

Independent external evaluation will be conducted by a National level certifying agencies

For SC/ ST/ BPL Households-no training fee, for General candidates- Rs. 125 .

One person from each household, to be enrolled in a nearest Training Centre/ Common Service Center (CSC)

20 Hours (Minimum 10 Days and Maximum 30 Days)

2.2. Objectives of the Study

The study was carried out for 50,000 beneficiaries of the DISHA project covering 30 States/UTs across the country. The specific objectives of the study are as follows:

- To outline each of the DISHA/NDLM interventions
- To collect quantitative data on the impact of the training programme on the beneficiaries
- To gather qualitative information on the community benefits from the training programme
- To record impact of the training process, levels of training, assessment process on the beneficiaries
- To document the present status of the beneficiaries who underwent the training process

III. Research Methodology

3.1. Data Collection

The study is based on the analysis of secondary data only. A dataset of 5,74,975 beneficiaries, covering thirty States, have been shared by the CSC e-Governance Services India Ltd., Ministry of Electronics & Information Technology (MeitY), Govt. of India. To carry out the impact assessment study, a representative sample of 51,748 respondents was drawn from 30 States stratified according to the number of districts for each State. The method of Simple Random Sampling has been followed for selection of sample size. However, a total of 50,159 responses were received.

Table – 1

| Sl. No. | State | Total Given Data | Sample Size (@ 9% of total given data) | Response received | Completion Percentage |
|---------|-------------------|------------------|--|-------------------|-----------------------|
| 1 | Andhra Pradesh | 3509 | 315.81 | 318 | 9.06 |
| 2 | Arunachal Pradesh | 1823 | 164.07 | 172 | 9.43 |
| 3 | Assam | 400 | 36 | 36 | 9 |
| 4 | Bihar | 135128 | 12161.52 | 12174 | 9.01 |
| 5 | Chandigarh | 972 | 87.48 | 90 | 9.26 |
| 6 | Chhattisgarh | 2622 | 235.98 | 236 | 9 |
| 7 | Delhi | 327 | 29.43 | 30 | 9.17 |
| 8 | Goa | 98 | 8.82 | 10 | 10.20 |
| 9 | Gujarat | 7199 | 647.91 | 751 | 10.43 |
| 10 | Haryana | 2889 | 260.01 | 289 | 10.00 |

Source: Secondary Data, 2017

The study was conducted by a team of experts of Centre for Innovations in Public Systems (CIPS), Hyderabad. The following methodologies were adopted:

- Review of the existing data of the beneficiaries available with CSC, Govt. of India
- Selection of 50,000 beneficiaries through Simple Random Sampling
- Preparation of questionnaire covering various heads viz. quality of service, quality of governance, overall satisfaction and perception of e-Governance based exposure to different govt. services, impact on work, efficiency, effectiveness etc.
- Focused telephonic discussion with each of the selected beneficiary to quantify qualitative changes

- Creation of an online repository to record the telephonic discussions
- Data Collection, Data Feeding, Data Cleaning, Data Analysis using statistical package (SAS) & Data Interpretation
- Identification of areas for further scope of improvements
- Recommendations and Suggestions
- Documentation

A representative sample of 50,000 respondents was drawn across the country and it was ensured that States/UTs are proportionally represented.

3.2. Preparation of an Online Questionnaire

An illustrative questionnaire was prepared and used for telephonic survey based on the learning acquired during the process of impact assessment. The investigators were trained to understand the nature of the survey, focus of the study and an interpretation of individual items in the questionnaire.

The questionnaire is broadly categorized under six heads:

- A. Details of the Trainee – Basic personal details of the beneficiary were cross verified with the data furnished by CSC e-Government Services India Ltd. Some details viz. profession/qualification, purpose of attending the training were also recorded.
- B. Computer – This section intends to test the basic computer skills of the individual.
- C. Mobile – This section intends to test the basic mobile usage skills of the individual. It primarily focuses on the usage of smart phone, accessing Wi-Fi services, making video calls etc. among others.

- D. Technology – This analyses individual’s ability to utilize technology for some meaningful purposes. Also, this enables to understand the individual’s ease in reading/writing emails, accessing social networking platforms etc. among others.
- E. Training – Basic infrastructure facilities, effectiveness and efficacy of the training is assessed here.
- F. Impact – This is one of the crucial parts in the questionnaire. This covers the personal and social impact with respect to the individual’s perspective.

Based on the analysis of the results obtained, presented below is a table which gives an idea about the ranking of the states on each of the section on the basis of which the impact of the training programme on the beneficiary has been assessed:

3.3. Order of the States

Table – 2: Order of the States in Computer Awareness

| Order | Owning a Computer | Computer Usage |
|--------------|--------------------------|-----------------------|

3.4. Insights into the questionnaire

Computer Literacy

Computer literacy is a major driving force which enables an individual to be digitally literate. The computer literacy of a beneficiary has been referred to the level of basic knowledge on the components, functions and applications of a computer and its basic usage. Having some basic skills in computer enables an individual to explore more job opportunities, meet their information needs, understand the impact of computer in the society and many others. Basic computer literacy often includes knowledge on input devices (mouse, keyboard etc.), processing devices (CPU, RAM etc.) and output devices (monitor, printer, speaker etc.).

In our study, three questions have been framed in this section which intends to test the basic computer skills of the individual. They are as follows:

Does your family own a computer – Owning a computer generally implies a higher level of knowledge and usage of it at least by one of the family members. Thus, it can be said that at least one person from the family is digitally literate which in turn increases the possibility that other members of the family are also digitally literate.

Frequency of usage of computer – Computers, in today's world, have become electronic devices of almost every day use for individuals regardless of their age, and essentially, they are widely used in all the business dealings that are made nowadays. More frequent use of computers lead to higher rate of saving time, improved efficiency and productivity.

Which of the following is not a component of the Computer – This question analyzes the basic computer knowledge of the respondent.

Mobile Literacy

A mobile phone is a wireless handheld device that allows users to make calls and send text messages in addition to the other features. It is the most prevalent tool in developing countries with a high penetration rate. Nowadays, mobile phones are packed with lot of additional features like web browsers, games, cameras, video players, navigational systems etc. A basic mobile phone is one of the simplest phones through which one can only make or receive calls and text messages. Modern mobile phones or smart phones have a lot of additional features that can be used for communication, computing and entertainment. These phones do multiple tasks from email and web browsing to playing music, capturing and playing videos, storing and managing data, etc. The ownership of mobile phones is increasingly common in almost all the socio-economic segments of the society. It facilitates

knowledge-centred learning by providing efficient and inventive methods. Mobile permits collaborative learning and continued conversation despite physical location and thus advance the process of coming to know, which occurs through conversations across contexts and among various people via several mobile technologies.

In this section, following questions have been asked to the beneficiaries to assess their level of mobile literacy:

What type of device do you use – Type of mobile device used by an individual plays a significant role to understand the level of digital literacy. While a basic phone could be used for performing balance enquiry, saving contacts, sending messages etc. a smart phone could be used for making video calls, drafting e-mails etc. in addition to the basic features. Accessing all these features indicate the level of mobile literacy of an individual.

Level of comfort in connecting Wi-Fi in Smart Phone – Wi-Fi is a method for devices such as smartphones to connect wirelessly to the Internet using radio waves. Connecting to the Internet using Wi-Fi, whenever available, prove to be cheaper and make the phone run more efficiently in the long run than relying on cellular networks. In many situations, strong, dedicated Wi-Fi connection results in undisturbed audio-video streaming. Higher the use of Wi-Fi in smart phone, higher the level of comfort.

Level of comfort in making video calls (Skype, Hangout etc.) – Video calling, nowadays, is one of the most effective ways of staying in touch. Mobile-based video calls are growing in numbers every day and is used both for personal and business purpose. Higher level of comfort in making video calls indicates greater number of mobile literate people.

Awareness on saving a contact – Phone numbers can be saved either in the SIM card or in the memory card depending upon the type of the phone used by an individual. While a basic phone could store only the name and phone number, a smart phone, in addition to the name

and phone number, could also store Fax numbers, addresses, user photos, e-mails etc. Knowledge on saving a contact allows an individual to save time and dial the number from the saved contact list of the phone.

Awareness on performing balance enquiry – One of the basic functions performed by an individual is to check balance in the phone. Various service providers have various codes/numbers dialing which will result in display of the available balance or talktime. Awareness on performing balance enquiry helps an individual to keep track of the money available for making calls in order to avoid unforeseen events.

Technology Literacy

The use of information technology has become a part of our daily life. It allows an individual not only to share information quickly and efficiently, but also to bring down linguistic and geographic boundaries among each other. With the help of information technology, communication has also become cheaper, quicker, and more efficient. Many collaboration platforms have been built in addition to face to face call via mobile devices. Information technology has also facilitated streamlining business process thus making them cost effective. Moreover, creation of new job opportunities attracts many students and professionals to the field of information technology.

This section, containing four questions, analyses an individual's ability to utilize technology for some meaningful purposes. Also, this enables to understand the individual's ease in reading/writing emails, accessing social networking platforms etc. among others.

Skills of reading/writing an e-Mail – e-mail is a method of exchanging digital messages between people using digital devices such as computers, tablets and mobile phones. Sending an email is much less expensive than sending postal mail, or long-distance telephone calls. e-

mail, by its nature, creates a detailed written record of the communication, the identity of the sender(s) and recipient(s) and the date and time the message was sent. In the event of a contract or legal dispute, saved emails can be used to prove that an individual was advised of certain issues, as each email has the date and time recorded on it. To access e-mail, an individual need to have an e-mail ID which can be created by following few easy and user-friendly steps. An individual, using e-mail facility, is considered as technology literate. Thus, higher skill in reading/writing an e-Mail leads to higher technology literacy.

What are the Purposes of using Technology – Internet has transformed the world into a global village that can be navigated at the click of a mouse. Today is the world of internet, one can shop through the internet, pay bills, plan finances, avail online courses, find jobs, work from home, promote business, reach out people etc. Newspapers have become the traditional means to search for jobs as the internet provides updated details of the job openings. Email notification option can be used to receive the emails regarding the jobs thereby keeping an individual updated with all kinds of openings. Online courses are the next big change that allows the people to study and work both at the same time. This has been possible only through the internet. It has also brought a greater visibility and credibility for the farmers who can find out the market price of the crops produced and thus can grab the marketplace for more business. Thus, this question, intends to identify the purposes for which technology has been used by most of the respondents.

Ease of accessing social networking sites – Internet has filled up a wide gap by providing social networking platforms like facebook, twitter, whatsapp etc. which an individual can use both for business and personal purpose. Hence, the aim of this question is to understand the level of ease of a respondent in accessing social networking sites.

Reporting a grievance to the Local Government using mobile/computer – Internet can be used by an individual to lodge complain about broken roads, poor drainage etc. in their neighborhood. Online reporting of grievances results in greater transparency, mass outreach and thus adoption of better monitoring systems in order to solve problems. An individual can use mobile/computer to register a complaint in a structured manner simply by following Interactive Voice Response (IVR) or SMS system. Higher number of reported grievance using mobile/computer by an individual indicates greater technology literacy. Thus, this question intends to identify the frequency of reporting a grievance by an individual.

Training

Number of Trainees per batch – this factor plays an important role in training. An optimum batch size allows the trainer to focus on each trainee thus making the sessions more participatory and interactive.

Level of satisfaction with the computers/laptops available during the training – It is important to have practical sessions to understand the basic applications of a computer/laptop. Making computers/laptops available for the trainees in a single batch allows an individual to spend more time to internalize the theory learnt during the training. This, in turn, leads to a higher level of satisfaction.

Conduct of periodic assessments – Conducting short assessments at a regular interval during the entire course of the training helps the trainer to monitor the performance of the trainees and take suitable actions accordingly. It is a way through which poor performing individuals can be identified and special focus can be given. Thus, the average performance of the batch increases which makes the training more efficient.

How did you find the assessment – It is equally important to give necessary attention to the questions asked to the trainees during the assessment. A proper linkage between the curriculum taught and the level of knowledge intake of the trainees makes an assessment effective. Hence, the degree of difficulty of the assessment for an individual measures his/her level of technology literacy.

Power supply to the class – Power supply plays a critical role during a training. Regular power supply ensures smooth functioning of the computers/laptops and internet connectivity. Thus an uninterrupted power supply ensures smooth conduct of a training session.

Availability of internet facility at the training center – Availability of internet facility at the training centre is important as it permits the trainee to explore more areas by using a computer/laptop.

Responsiveness of the trainer to your queries – A training is said to be effective when there is a two way communication between the trainees and the trainer. While trainees are supposed to pose queries, it is important for a trainer to listen to the queries carefully and give proper feedback. The responsiveness of the trainer, thus, plays a key role in making a training successful.

Availability of Hands on training sessions with the mobile/laptop/computer – A training on computers/laptops/mobiles demands hands on sessions where the trainees get an opportunity to transform their classroom knowledge into reality. Availability of sufficient hands on training sessions motivates an individual to be trained and become technology literate.

Impact

Level of confidence in using digital devices after the training – It is important to consider the level of confidence of an individual in using digital devices after the training. A higher confidence level allows an individual to use computer/laptop/mobile in a far efficient manner.

Level of ease in using computer after training – The level of ease in using a computer after training acts as a vital indicator to measure the impact of training on an individual. Higher level of ease ensures performance of digital activities in a time saving and cost-effective way.

Level of ease in using mobile after training – Higher level of ease in using mobile after training makes an individual more confident and allows him/her to stay connected with the rest of the world.

Accessing website(s)/ portal(s) to search for Govt. Welfare Schemes/ Crop Prices/ Jobs etc. – It is important to understand the purpose of accessing website(s)/ portal(s) by an individual. It varies depending upon the individual needs which again depends on several factors like age, occupation, family income and many others. A meaningful use of technology keeps an individual updated and helps to prosper in future.

Educating others (family, friends etc.) about the use of IT – educating others is considered to be very crucial. A digitally literate person acts as a change agent as (s)he encourages and motivates his/her family members, friends to become IT literate. On the other hand, as a digitally literate person secures a better place in the society he/she belongs to, the rest of the people also get attracted to become so. Hence, a higher rate of educating others (family, friends etc.) about the use of IT has a trickledown effect which makes the entire society digitally literate.

Recommending the training to your family members / friends – In a society in a rural area where the outreach of internet or newspaper is absent or minimal, word of mouth plays a

major role in awareness generation. Trainees, after successful completion of training, can recommend the training programme to their family members / friends explaining the positive impact of the same.

Difficulties faced during the training – It is always important to identify the difficulties faced by a trainee while undergoing the training programme. This helps to understand the areas and scope of further improvement. However, lower number of difficulties faced implies higher success rate of the training programme.

3.5. Data Analysis

The study is exploratory in nature. It tries to understand the nature (which dimensions) and degree of impact of the training programme. The aim of the analysis is to produce a credible assessment of impact of the training programme on each respondent on computer literacy, mobile literacy, technology literacy, training infrastructure etc.

An illustrative online questionnaire was prepared and has been attached as an Annexure. The original questionnaire used for the telephonic survey has been revised based on a series of discussions with CSC e-Governance Services Ltd. The investigators were trained to understand the nature of the survey, focus of the study and also to interpret individual items in the questionnaire.

The questionnaire was broadly categorized under six heads:

Table – 7: Details of the Questionnaire

| Sl. No. | Head | No. of Questions | Content |
|----------------|------------------------|-------------------------|--|
| 1. | Details of the Trainee | 13 | Basic personal details of the beneficiary were cross verified with the data furnished by CSC e-Government Services India Ltd. Some details viz. profession/qualification, purpose of attending the training were also recorded. |
| 2 | Computer | 02 | This section intends to test the basic computer skills of the individual. |
| 3. | Mobile | 05 | This section intends to test the basic mobile usage skills of the individual. It primarily focuses on the usage of smart phone, accessing Wi-Fi services, making video calls etc. among others. |
| 4. | Technology | 05 | This analyses individual's ability to utilize technology for some meaningful purposes. Also, this enables to understand the individual's ease in reading/writing emails, accessing social networking platforms etc. among others |
| 5. | Training | 08 | Basic infrastructure facilities, effectiveness and efficacy of the training is assessed here. |
| 6. | Impact | 07 | This is one of the crucial parts in the questionnaire. It covers the personal and social impact with respect to the individual's perspective. |

Source: Online Questionnaire

A telephonic survey of 51,748 respondents had been conducted to collect information on the above said heads. The reference period for the telephonic survey for this study was January, 2017 – February, 2017.

The measurements are based on the available information. An analysis of differences between the pre-implementation and post-implementation of the training programme was presented to measure the impact of the training programme.

A credible assessment of the impact of the training programme was made on the following key dimensions:

Social Impact

- Access to Govt. portals/schemes
- Access to day to day affairs (newspapers, other news portals/google search)
- Level of participation in social groups (SHGs, Cooperative Societies etc.)
- Use of technology for community welfare (citizen journalism, law & order issues, basic services etc.)
- Role in decision making at village level
- Level of interest in imparting/recommending technology to others
- Educating other members of the family
- Self esteem

Personal Impact

- Access to job portals/ banking services
- Morale boost
- Strengthen family/social bonding
- Building a suitable career
- Enhancement of interpersonal/soft skills

The responses of the beneficiaries were recorded either in a “Yes/No” format where numeric values can be assigned or by using a three/five point Likert Scale.

A set of attributes were prepared and each respondent was asked to rank them based on their desirability. Thus, a rank correlation coefficient was computed to understand the most effective attributes of the training programme.

A detailed fact sheet was prepared for each beneficiary. The data was analyzed using the Excel and SAS statistical package.

3.6. Use of tools and techniques

Likert Scale: Likert scale is the sum of responses on several Likert items. Likert item is simply a statement which the respondent is asked to evaluate according to any kind of subjective or objective criteria; generally, the level of agreement or disagreement is measured. Often five ordered and three ordered response levels are used. Sometimes an even-point scale is used, where the middle option of "Neither agree nor disagree" is not available. This is sometimes called a "forced choice" method, since the neutral option is removed. The neutral option can be seen as an easy option to take when a respondent is unsure, and so whether it is a true neutral option is questionable. While comparing between a 4-point and a 5-point Likert scale, where the former has the neutral option unavailable, the overall difference in the response is negligible. The value assigned to a Likert item has no unique mathematical property. The value assigned for each Likert item is simply determined on the basis of the necessity of the research. However, Likert items tend to take progressive positive integer values. Likert scales typically range from 2 to 10 – with 5 or 7 being the most common. In this, the typical structure of the Likert scale is such that each progressive Likert item is treated as having a better response than the preceding value. (This may differ in cases where reverse ordering of the Likert Scale is needed). A good Likert scale will present symmetry of Likert items. In such symmetric scaling, equidistant attributes will be more clearly inferred.

In our study, we have used both 3-point and 5-point Likert Scale to assess the level of computer literacy, mobile literacy, technology literacy and overall impact on the beneficiary and also to understand the infrastructural availability of the training.

Pearson Correlation Coefficient: Pearson correlation coefficient measures the strength and direction of linear association between two variables. It is referred to as Pearson's correlation or simply as the correlation coefficient.

The symbol for Pearson's correlation is " ρ " when it is measured in the population and " r " when it is measured in a sample. The symbol for Pearson's correlation is " ρ " when it is measured in the population and " r " when it is measured in a sample. The value of correlation coefficient can range from -1 to +1. An r of -1 indicates a perfect negative linear relationship between variables, an r of 0 indicates no linear relationship between variables, and an r of 1 indicates a perfect positive linear relationship between variables.

Since we are dealing exclusively with samples, we will use r to represent Pearson's correlation as shown below:

$$r_{X,Y} = \frac{Cov(X,Y)}{\sigma_X \sigma_Y}$$

Where $Cov(X, Y) =$ Covariance

$\sigma_X =$ Standard Deviation of X

$\sigma_Y =$ Standard Deviation of Y

T-test: t-test is a statistical hypotheses test in which the test statistic follows a Student's t-distribution under the null hypothesis. It can be used to determine if two sets of data are significantly different from each other. The statistical significance of t-test indicates whether or not the difference between two groups' averages most likely reflects a "real" difference in the population from which the groups were sampled. Statistical significance is determined by the size of the difference between the group averages, the sample size, and the standard deviations of the groups.

Table – 8: Types of t-test

| Test | Purpose |
|-----------------------------|---|
| One sample t-test | Tests whether the mean of a single population is equal to a target value |
| Two sample t-test | Tests whether the difference between the means of two independent populations is equal to a target value |
| Paired t-test | Tests whether the mean of the differences between dependent or paired observations is equal to a target value |
| t-test in regression output | Tests whether the values of coefficients in the regression equation differ significantly from zero |

Mathematically, t-test is represented as follows:

$$t = \frac{\bar{x} - \bar{y}}{\sqrt{\frac{\sigma_x^2}{n_1} + \frac{\sigma_y^2}{n_2}}}$$

In our study, we have used two sample t-test to compare the mean and standard deviation of samples of different states.

Chi-square (χ^2) test: A chi-squared test is a statistical hypothesis test wherein the sampling distribution of the test statistic is a chi-squared distribution when the null hypothesis is true. Without other qualification, 'chi-squared test' often is used as short for Pearson's chi-squared test.

Pearson's chi-squared test, also known as the chi-squared goodness-of-fit test or chi-squared test for independence. When the chi-squared test is mentioned without any modifiers or other precluding contexts, this test is often meant.

To perform the test, two hypotheses have to be set up:

Null Hypothesis – The two categorical variables are independent

Alternative Hypothesis – The two categorical variables are dependent

The chi-square test statistic is calculated by using the formula:

$$\chi^2 = \frac{\sum(O - E)^2}{E}$$

Where O represents the observed frequency and E represents the expected frequency under the null hypothesis and computed by $E = \frac{\text{row total} \times \text{column total}}{\text{total sample size}}$

We will compare the calculated value with the tabulated value with degrees of freedom (df) = $(r - 1)(c - 1)$ and will accept/reject the null hypothesis accordingly.

Analysis of Variance (ANOVA): ANOVA is a statistical procedure used to test the degree to which two or more groups vary or differ in an experiment. A great deal of variance (or difference) usually indicates that there was a significant finding from the research.

ANOVA test is performed on the basis of two hypotheses:

Null Hypothesis – A null hypothesis is the assumption that there will be no differences between groups that are tested and therefore, no significant results will be revealed.

Alternative Hypothesis – this hypothesis states that there will be a difference between groups as indicated by the ANOVA performed on the data.

In this study, a two factor ANOVA has been used to compare more than two groups at the same time to determine whether a variation exists between them.

Logit Model: Out of the variety of methods for scoring models, in this study we focus on logit model approach. Logit model is a widely used statistical parametric model for modeling binary dependent variable and is supported by statistical tests verifying estimated parameters. In statistics, logistic regression is a type of regression analysis used for predicting the outcome of a categorical (a variable that can take on a limited number of categories) criterion variable based on one or more predictor variables. The probabilities describing the possible outcome of a single trial are modeled, as a function of explanatory variables, using a logistic function.

Logistic regression can be binary or multinomial. Binomial or binary logistic regression refers to the instance in which the observed outcome can have only two possible types (e.g., "dead" vs. "alive", "success" vs. "failure", or "yes" vs. "no"). Multinomial logistic regression refers to cases where the outcome can have three or more possible types (e.g., "better" vs. "no change" vs. "worse"). Generally, the outcome is coded as "0" and "1" in binary logistic regression as it leads to the most straightforward interpretation. The target group (referred to as a "case") is usually coded as "1" and the reference group (referred to as a "noncase") as "0".

Like other forms of regression analysis, logistic regression makes use of one or more predictor variables that may be either continuous or categorical. However, logistic regression is used for predicting binary outcomes (Bernoulli trials) rather than continuous outcomes. It is necessary that logistic regression take the natural logarithm of the odds (referred to as the logit or log-odds) to create a continuous criterion. The logit of success is then fit to the predictors using regression analysis. The results of the logit model can be converted back to the odds via the exponential function or the inverse of

the natural logarithm. Therefore, although the observed variables in logistic regression are categorical, the predicted scores are actually modeled as a continuous variable (the logit).

Logistic regression is used extensively in numerous cases, like, the medical and social sciences fields, natural language processing, marketing applications such as prediction of a customer's propensity to purchase a product or cease a subscription, etc. In each of these instances, a logistic regression model would compute the relevant odds for each predictor, take the natural logarithm of the odds (compute the logit), conduct a linear regression analysis on the predicted values of the logit, and then take the exponential function of the logit to compute the odds ratio. In our study, the logit model is used in order to identify the influence of demographic factors like age, caste, education etc. on the probability of increased digital literacy of the beneficiaries.

IV. Impact Assessment

Quality of Improvement – Five Point Likert Scale

The quality of improvement has been assessed on different attributes. In addition, the overall quality has also been assessed. Respondents rated each question on a five point scale. For each attribute, an average score has been computed for all respondents from each State using the numeric values of 1-0 where 1 represents the best and 0 represents the worst outcome respectively. Assuming equal weights for each of the following 9 questions, an average score was computed and presented in the following table:

Table – 9: Mean value for North Zone

| Question | Mean of the response (on a 5 point Likert Scale) | | | | | | |
|--|--|------|------|--------|-----------|-------|------------|
| | Haryana | H.P | J&K | Punjab | Rajasthan | Delhi | Chandigarh |
| Level of comfort in connecting Wi-Fi in Smart Phone | 0.87 | 1.67 | 0.81 | 1.23 | 1.42 | 1.5 | 0.63 |
| Level of comfort in making video calls | 1.66 | 1.82 | 1.01 | 1.43 | 1.52 | 1.86 | 1.02 |
| Ease of accessing social networking sites | 0.75 | 1.26 | 0.81 | 1.21 | 1.42 | 1.4 | 0.67 |
| Reporting a grievance to the Local Government using mobile/ computer | 0.10 | 0.03 | 0.05 | 0.10 | 0.54 | 0 | 0.67 |
| Nature of assessment | 1.11 | 1.72 | 1.93 | 1.57 | 1.63 | 1.56 | 1.09 |
| Level of confidence in using digital devices after the training | 1.12 | 2.08 | 0.99 | 1.77 | 1.57 | 1.6 | 1.09 |

| Question | Mean of the response (on a 5 point Likert Scale) | | | | | | |
|---|--|-------------|-------------|-------------|-------------|-------------|-------------|
| | Haryana | H.P | J&K | Punjab | Rajasthan | Delhi | Chandigarh |
| Accessing website(s)/ portal(s) to search for Govt. Welfare Schemes/ Crop Prices/ Jobs etc. | 0.56 | 1.93 | 0.29 | 1.61 | 1.50 | 1.7 | 0.66 |
| Educating Others (family, friends etc.) about the use of IT | 1.14 | 2.35 | 0.68 | 1.96 | 1.73 | 1.73 | 1.14 |
| Recommending the training to your family members / friends | 1.12 | 2.24 | 0.97 | 1.81 | 1.54 | 1.7 | 1.16 |
| Grand Mean | 0.94 | 1.68 | 0.84 | 1.41 | 1.43 | 1.45 | 0.90 |

The above table shows that Haryana has the highest quality of improvement on computer literacy, mobile literacy, technology literacy, level of satisfaction about training infrastructure with an average value close to 1 followed by Chandigarh and J&K. On the other hand, response from all the other states stands between good and satisfactory (i.e., a value between 1 and 2) with Himachal Pradesh showing the least satisfactory improvement of the respondents after attending the training.

Table – 10: Mean value for South Zone

| Question | Mean of the response (on a 5 point Likert Scale) | | | | | |
|--|--|-------------|-------------|-------------|-------------|-------------|
| | Andhra Pradesh | Karnataka | Kerala | Puducherry | Tamil Nadu | Telangana |
| Level of comfort in connecting Wi-Fi in Smart Phone | 0.35 | 1.83 | 1.20 | 1.67 | 1.73 | 1.11 |
| Level of comfort in making video calls | 1.03 | 1.68 | 1.40 | 1.83 | 1.92 | 1.34 |
| Ease of accessing social networking sites | 0.68 | 1.84 | 1.40 | 1.42 | 1.72 | 1.18 |
| Reporting a grievance to the Local Government using mobile/ computer | 0.32 | 0.42 | 0.20 | 0 | 0.92 | 0.22 |
| Nature of assessment | 1.14 | 1.70 | 1.0 | 1.33 | 1.75 | 1.43 |
| Level of confidence in using digital devices after the training | 1.05 | 2.04 | 1.40 | 1.59 | 1.69 | 1.60 |
| Accessing website(s)/ portal(s) to search for Govt. Welfare Schemes/ Crop Prices/ Jobs etc | 0.33 | 2.17 | 1.20 | 1.42 | 1.69 | 1.66 |
| Educating Others (family, friends etc.) about the use of IT | 1.06 | 2.26 | 1.20 | 1.67 | 1.69 | 1.80 |
| Recommending the training to your family members / friends | 1.06 | 2.03 | 1.00 | 1.59 | 1.73 | 1.48 |
| Grand Mean | 0.78 | 1.77 | 1.11 | 1.39 | 1.65 | 1.31 |

In South Zone, Andhra Pradesh tops the table with an average of 0.78 implying a good level of improvement when compared to the other States. Respondents from the state of Karnataka shows an improvement at a satisfactory level with an average value of 1.77 while the quality of improvement for all the other states stands between good and satisfactory (i.e., a value between 1 and 2).

Table – 11: Mean value for East Zone

| Question | Mean of the response (on a 5 point Likert Scale) | | | |
|--|---|-------------|-------------|-------------|
| | Bihar | Jharkhand | Odisha | West Bengal |
| Level of comfort in connecting Wi-Fi in Smart Phone | 1.35 | 0.60 | 1.50 | 0 |
| Level of comfort in making video calls | 1.52 | 0.90 | 1.74 | 2.08 |
| Ease of accessing social networking sites | 1.39 | 0.71 | 1.69 | 1.91 |
| Reporting a grievance to the Local Government using mobile/computer | 0.43 | 0 | 0 | 0.17 |
| Nature of assessment | 1.62 | 1.41 | 1.89 | 1.92 |
| Level of confidence in using digital devices after the training | 1.57 | 1.39 | 1.96 | 2.05 |
| Accessing website(s)/ portal(s) to search for Govt. Welfare Schemes/ Crop Prices/ Jobs etc | 1.53 | 1.17 | 1.97 | 2.03 |
| Educating Others (family, friends etc.) about the use of IT | 1.76 | 1.38 | 2.03 | 2.71 |
| Nature of assessment | 1.35 | 0.60 | 1.50 | 2.18 |
| Recommending the training to your family members / friends | 1.59 | 1.39 | 2.03 | 2.61 |
| Grand Mean | 1.42 | 0.99 | 1.64 | 1.72 |

The above table for the east zone represents that Jharkhand has the highest quality of improvement for the above said attributes whereas Bihar, Odisha, and West Bengal secures the second, third and fourth position respectively.

Table – 12: Mean value for West Zone

| Question | Mean of the response (on a 5 point Likert Scale) | | |
|--|---|-------------|-------------|
| | Goa | Gujarat | Maharashtra |
| Level of comfort in connecting Wi-Fi in Smart Phone | 0.30 | 1.30 | 1.19 |
| Level of comfort in making video calls | 1.20 | 1.57 | 1.29 |
| Ease of accessing social networking sites | 0.90 | 1.28 | 1.08 |
| Reporting a grievance to the Local Government using mobile/computer | 0.40 | 0.01 | 0.67 |
| Nature of assessment | 1.00 | 1.75 | 1.22 |
| Level of confidence in using digital devices after the training | 1.10 | 1.75 | 1.24 |
| Accessing website(s)/ portal(s) to search for Govt. Welfare Schemes/ Crop Prices/ Jobs etc | 0.30 | 1.81 | 1.10 |
| Educating Others (family, friends etc.) about the use of IT | 1.10 | 1.93 | 1.36 |
| Recommending the training to your family members / friends | 1.10 | 1.63 | 1.21 |
| Grand Mean | 0.82 | 1.45 | 1.15 |

From the above table, it can be found that the overall impact of the training is highest on the respondents of Goa while it is low for Gujarat.

Table – 13: Mean value for North-East Zone

| Question | Mean of the response (on a 3 point Likert Scale) | | | | | |
|--|--|-------------|-------------|-------------|-------------|-------------|
| | Arunachal Pradesh | Assam | Manipur | Mizoram | Nagaland | Sikkim |
| Level of comfort in connecting Wi-Fi in Smart Phone | 0.49 | 1.67 | 1.73 | 0.52 | 1.45 | 2.09 |
| Level of comfort in making video calls | 0.98 | 1.92 | 1.63 | 0.76 | 1.59 | 2.21 |
| Ease of accessing social networking sites | 0.66 | 1.56 | 1.54 | 0.71 | 1.38 | 2.07 |
| Reporting a grievance to the Local Government using mobile/ computer | 0.02 | 0 | 1.02 | 0.16 | 0.16 | 0 |
| Nature of assessment | 1.43 | 2.11 | 1.73 | 0.98 | 1.58 | 2.04 |
| Level of confidence in using digital devices after the training | 0.99 | 1.97 | 1.86 | 1.01 | 1.69 | 2.25 |
| Accessing website(s)/ portal(s) to search for Govt. Welfare Schemes/ Crop Prices/ Jobs etc | 0.08 | 1.44 | 1.75 | 0.70 | 1.30 | 2.07 |
| Educating Others (family, friends etc.) about the use of IT | 0.56 | 1.58 | 1.94 | 0.89 | 1.47 | 2.17 |
| Recommending the training to your family members / friends | 0.91 | 1.53 | 1.91 | 0.98 | 1.37 | 1.85 |
| Grand Mean | 0.68 | 1.53 | 1.68 | 0.74 | 1.33 | 1.86 |

From the above table, it is evident that the respondents from the state of Mizoram has experienced the highest quality of improvement after attending the training followed by Arunachal Pradesh, Nagaland, Assam, Manipur and Sikkim.

Table – 14: Mean value for Central Zone

| Question | Mean of the response (on a 5 point Likert Scale) | | | |
|--|--|----------------|---------------|-------------|
| | Chhattisgarh | Madhya Pradesh | Uttar Pradesh | Uttarakhand |
| Level of comfort in connecting Wi-Fi in Smart Phone | 1.98 | 1.01 | 1.51 | 1.72 |
| Level of comfort in making video calls | 1.99 | 1.23 | 1.51 | 1.81 |
| Ease of accessing social networking sites | 1.78 | 1.12 | 1.32 | 1.64 |
| Reporting a grievance to the Local Government using mobile/ computer | 0.15 | 0.12 | 0.27 | 0.25 |
| Nature of assessment | 2.09 | 1.32 | 1.50 | 1.83 |
| Level of confidence in using digital devices after the training | 2.25 | 1.46 | 1.76 | 1.86 |
| Accessing website(s)/ portal(s) to search for Govt. Welfare Schemes/ Crop Prices/ Jobs etc | 2.17 | 1.52 | 2.14 | 1.88 |
| Educating Others (family, friends etc.) about the use of IT | 2.15 | 1.71 | 2.27 | 2.08 |
| Recommending the training to your family members / friends | 1.85 | 1.65 | 1.51 | 1.75 |
| Grand Mean | 1.82 | 1.24 | 1.53 | 1.65 |

From the above table, it is clear that all the states in central zone have shown only a satisfactory improvement in the quality of the above said attributes with Madhya Pradesh on the top and Chhattisgarh at the bottom of the table.

Thus, all the States, taken together in a single table, can be represented and ranked based on the grand mean value of the overall quality of improvement.

Table – 15: Ranking of the States

| Ranking | Zones | | | | | |
|----------------|------------------|----------------|-------------|-------------|-------------------|----------------|
| | North | South | East | West | North-East | Central |
| First | Haryana | Andhra Pradesh | Jharkhand | Goa | Mizoram | Madhya Pradesh |
| Second | Chandigarh | Kerala | Bihar | Maharashtra | Arunachal Pradesh | Uttar Pradesh |
| Third | Jammu & Kashmir | Telangana | Odisha | Gujarat | Nagaland | Uttarakhand |
| Fourth | Punjab | Puducherry | West Bengal | | Assam | Chhattisgarh |
| Fifth | Rajasthan | Tamil Nadu | | | Manipur | |
| Sixth | Delhi | Karnataka | | | Sikkim | |
| Seventh | Himachal Pradesh | | | | | |

In our online questionnaire, 3 questions have been asked for which the responses received have been categorized in a 5 point Likert scale with 1 denoting the best outcome and 5 denoting the worst outcome respectively. The mean value of the State-wise response is shown in the following table:

Table – 16: Mean value for North Zone

| Question | Mean of the response (on a 5 point Likert Scale) | | | | | | |
|---|--|-------------|-------------|-------------|-------------|-------------|-------------|
| | Haryana | H.P | J&K | Punjab | Rajasthan | Delhi | Chandigarh |
| Level of satisfaction with the computers/ laptops available during the training | 2.63 | 1.84 | 4.50 | 2.25 | 2.21 | 2.13 | 2.34 |
| Level of ease in using computer after training | 2.91 | 2.44 | 2.55 | 2.52 | 2.36 | 2.47 | 2.88 |
| Level of ease in using mobiles after training | 1.11 | 1.89 | 1.11 | 2.07 | 2.25 | 1.57 | 1.11 |
| Grand Mean | 2.22 | 2.06 | 2.72 | 2.28 | 2.27 | 2.06 | 2.11 |

Table – 17: Mean value for South Zone

| Question | Mean of the response (on a 5 point Likert Scale) | | | | | |
|---|--|-------------|-------------|-------------|-------------|-------------|
| | Andhra Pradesh | Karnataka | Kerala | Puducherry | Tamil Nadu | Telangana |
| Level of satisfaction with the computers/ laptops available during the training | 2.96 | 1.92 | 2.40 | 1.75 | 2.38 | 2.31 |
| Level of ease in using computer after training | 2.99 | 2.12 | 1.80 | 2.08 | 2.36 | 2.56 |
| Level of ease in using mobiles after training | 1.04 | 1.94 | 2.00 | 1.42 | 2.07 | 2.10 |
| Grand Mean | 2.33 | 1.99 | 2.07 | 1.75 | 2.27 | 2.32 |

Table – 18: Mean value for East Zone

| Question | Mean of the response (on a 5 point Likert Scale) | | | |
|---|--|-------------|-------------|-------------|
| | Bihar | Jharkhand | Odisha | West Bengal |
| Level of satisfaction with the computers/ laptops available during the training | 2.22 | 2.00 | 1.82 | 2.03 |
| Level of ease in using computer after training | 2.39 | 2.56 | 2.18 | 2.08 |
| Level of ease in using mobiles after training | 1.61 | 1.39 | 1.66 | 2.01 |
| Grand Mean | 2.07 | 1.98 | 1.89 | 2.04 |

Table – 19: Mean value for West Zone

| Question | Mean of the response (on a 5 point Likert Scale) | | |
|--|--|-------------|-------------|
| | Goa | Gujarat | Maharashtra |
| Level of satisfaction with the computers/laptops available during the training | 2.80 | 1.91 | 2.20 |
| Level of ease in using computer after training | 2.70 | 2.46 | 2.28 |
| Level of ease in using mobiles after training | 1.10 | 1.64 | 1.97 |
| Grand Mean | 2.20 | 2.00 | 2.15 |

Table – 20: Mean value for North-East Zone

Analysis on number of trainees per batch

In this section, the respondents from all the 30 States have been analyzed in a 5 point Likert scale, each point having the following values:

1 – 0-5

2 – 6-10

3 – 11-20

4 – 21-30

5 – 31 & above

The analysis has been performed zone wise and below mentioned are the results obtained.

Table – 23: Mean value for North Zone

| Question | Mean of the response (on a 5 point Likert Scale) | | | | | | |
|------------------------------|--|------|------|--------|-----------|-------|------------|
| | Haryana | H.P | J&K | Punjab | Rajasthan | Delhi | Chandigarh |
| Number of trainees per batch | 3.95 | 3.50 | 3.11 | 3.64 | 3.60 | 3.63 | 3.71 |

Table – 24: Mean value for South Zone

| Question | Mean of the response (on a 5 point Likert Scale) | | | | | |
|------------------------------|--|-----------|--------|------------|------------|-----------|
| | Andhra Pradesh | Karnataka | Kerala | Puducherry | Tamil Nadu | Telangana |
| Number of trainees per batch | 3.51 | 3.44 | 3.20 | 2.25 | 4.05 | 3.84 |

Table – 25: Mean value for East Zone

| Question | Mean of the response (on a 5 point Likert Scale) | | | |
|------------------------------|--|-----------|--------|-------------|
| | Bihar | Jharkhand | Odisha | West Bengal |
| Number of trainees per batch | 3.68 | 2.67 | 3.37 | 3.81 |

Table – 26: Mean value for West Zone

| Question | Mean of the response (on a 5 point Likert Scale) | | |
|------------------------------|--|---------|-------------|
| | Goa | Gujarat | Maharashtra |
| Number of trainees per batch | 4.20 | 3.57 | 3.54 |

Table – 27: Mean value for North-East Zone

| Question | Mean of the response (on a 5 point Likert Scale) | | | | | |
|------------------------------|--|-------|---------|---------|----------|--------|
| | Arunachal Pradesh | Assam | Manipur | Mizoram | Nagaland | Sikkim |
| Number of trainees per batch | 3.26 | 3.39 | 3.54 | 3.97 | 3.84 | 3.65 |

Table – 28: Mean value for Central Zone

| Question | Mean of the response (on a 5 point Likert Scale) | | | |
|------------------------------|--|----------------|---------------|-------------|
| | Chhattisgarh | Madhya Pradesh | Uttar Pradesh | Uttarakhand |
| Number of trainees per batch | 3.31 | 3.62 | 3.70 | 3.38 |

From the above data, it can be seen that for the north zone, all the states are having values between 3 and 4, thus implying that the average number of trainees per batch varies between 11 to 30 with Haryana and Punjab having the highest and lowest average batch size respectively. In the south zone, Tamil Nadu is having the highest average number of trainees per batch with a value of 4.05 while all the other states are having an average batch size between 11 and 30. West Bengal, in the east zone, has the highest average number of trainees per batch which is close to 21 followed by Bihar, Odisha and Jharkhand respectively. In the west zone, Goa tops the table with an average number of trainees of 21 and above per batch whereas in the central zone, Uttar Pradesh is on the top with an average batch size between 11 and 30.

Analysis on skills of reading/writing e-Mail

The respondents for each of the 30 states has been analyzed on the basis of skills of reading/writing an e-Mail. The mean value has been calculated for each State and has been represented in a tabular format in a zone wise manner. It may be noted that the responses have been received in a 6 point Likert scale where 1 represents “Very Good” and 6 represents “Not at all” respectively. A lower mean value indicates higher positive impact on the skills of reading/writing an e-Mail and vice versa.

Table – 29: Mean value for North Zone

| Question | Mean of the response (on a 6 point Likert Scale) | | | | | | |
|------------------------------------|--|------|------|--------|-----------|-------|------------|
| | Haryana | H.P | J&K | Punjab | Rajasthan | Delhi | Chandigarh |
| Skills of reading/writing an email | 2.54 | 3.00 | 3.85 | 3.03 | 2.98 | 3.30 | 2.72 |

Table – 30: Mean value for South Zone

| Question | Mean of the response (on a 6 point Likert Scale) | | | | | |
|------------------------------------|--|-----------|--------|------------|------------|-----------|
| | Andhra Pradesh | Karnataka | Kerala | Puducherry | Tamil Nadu | Telangana |
| Skills of reading/writing an email | 3.03 | 2.77 | 2.80 | 3.25 | 3.31 | 2.94 |

Table – 31: Mean value for East Zone

| Question | Mean of the response (on a 6 point Likert Scale) | | | |
|------------------------------------|--|-----------|--------|-------------|
| | Bihar | Jharkhand | Odisha | West Bengal |
| Skills of reading/writing an email | 2.54 | 4.29 | 2.10 | 3.42 |

Table – 32: Mean value for West Zone

| Question | Mean of the response (on a 6 point Likert Scale) | | |
|-------------------------------------|--|---------|-------------|
| | Goa | Gujarat | Maharashtra |
| Skills of reading/ writing an email | 2.00 | 3.17 | 2.73 |

Table – 33: Mean value for North-East Zone

| Question | Mean of the response (on a 6 point Likert Scale) | | | | | |
|-------------------------------------|--|-------|---------|---------|----------|--------|
| | Arunachal Pradesh | Assam | Manipur | Mizoram | Nagaland | Sikkim |
| Skills of reading/ writing an email | 3.81 | 4.44 | 3.16 | 2.79 | 3.74 | 3.66 |

Table – 34: Mean value for Central Zone

| Question | Mean of the response (on a 6 point Likert Scale) | | | |
|------------------------------------|--|----------------|---------------|-------------|
| | Chhattisgarh | Madhya Pradesh | Uttar Pradesh | Uttarakhand |
| Skills of reading/writing an email | 3.55 | 2.72 | 2.88 | 3.63 |

From the above analysis, it is evident that in the north zone, for the respondents from Haryana, the skill level in reading/writing an e-Mail is between “Good” and “Neither Good nor Bad” immediately followed by Chandigarh and Rajasthan. For the other states, the skill level lies between “Neither Good nor Bad” and “Bad”. In the south zone, Karnataka, Kerala and Telangana are having an average skill level between “Good” and “Neither Good nor Bad” in terms of reading/writing an e-Mail whereas for the other states it is between “Neither Good nor Bad” and “Bad”. Odisha tops the east zone with an average value between “Good” and “Neither Good nor Bad” whereas Jharkhand shows the poorest impact. Goa, Mizoram

and Uttar Pradesh reflects the best impact compared to their counterparts in West, North-East and Central zone respectively.

Table – 35: Ranking of the States

| Ranking | Skills of reading/writing an e-Mail (Zone wise) | | | | | |
|---------|---|----------------|-------------|-------------|-------------------|----------------|
| | North | South | East | West | North-East | Central |
| First | Haryana | Karnataka | Odisha | Goa | Mizoram | Madhya Pradesh |
| Second | Chandigarh | Kerala | Bihar | Maharashtra | Manipur | Uttar Pradesh |
| Third | Rajasthan | Telangana | West Bengal | Gujarat | Sikkim | Chhattisgarh |
| Fourth | Himachal Pradesh | Andhra Pradesh | Jharkhand | | Nagaland | Uttarakhand |
| Fifth | Punjab | Puducherry | | | Arunachal Pradesh | |
| Sixth | Delhi | Tamil Nadu | | | Assam | |
| Seventh | J&K | | | | | |

Analysis on purposes of using technology

Respondents from all the states have been analyzed on the basis of the purposes of using technology by them. The responses received have been assigned values from 1 to 6 for the following six purposes:

1. Agriculture Market Price Information
2. Utility Bill Payment (Ticket Booking, Online Recharge)/Online Banking
3. Getting information about educational/ employment opportunities
4. Weather Information
5. Accessing Govt. Websites/Filing online Applications (PAN Card, Passport etc)
6. Others

It is very likely that a respondent might use technology for multiple purposes. Keeping this possibility in mind, further values, i.e., from 7 onwards, have been assigned for combinations of two purposes. To give an example, a combination of (1,2) will get the value 7, a combination of (1,3) will get the value 8 and so on and so forth. Similarly, once the combination of two purposes end, combinations of 3 purposes will start like (1,2,3), (1,2,4) and so on. The values have been assigned to each of the combination in a chronological order. In brief it can be shown as follows:

Table – 36: Values of the Purpose of Using Technology

| Purpose | Value |
|---------------------|--------------|
| Single | 1 – 6 |
| Double | 7 – 21 |
| Triple | 22 – 41 |
| Combination of four | 42 – 56 |
| Combination of five | 57 – 62 |
| Combination of six | 63 |

The mean value for each state has been calculated zone wise depending upon their purposes of using technology. Thus a higher mean value represents use of technology by a state for multiple purposes.

Table – 37: Mean Value for North Zone

| Question | Mean of the response | | | | | | |
|------------------------------|----------------------|------|-------|--------|-----------|-------|------------|
| | Haryana | H.P | J&K | Punjab | Rajasthan | Delhi | Chandigarh |
| Purposes of using Technology | 4.14 | 5.24 | 19.05 | 9.03 | 9.76 | 7.40 | 5.48 |

Table – 38: Mean Value for South Zone

| Question | Mean of the response | | | | | |
|------------------------------|----------------------|-----------|--------|------------|------------|-----------|
| | Andhra Pradesh | Karnataka | Kerala | Puducherry | Tamil Nadu | Telangana |
| Purposes of using Technology | 5.04 | 10.90 | 3.00 | 11.92 | 4.25 | 11.66 |

Table – 39: Mean Value for East Zone

| Question | Mean of the response | | | |
|------------------------------|----------------------|-----------|--------|-------------|
| | Bihar | Jharkhand | Odisha | West Bengal |
| Purposes of using Technology | 22.33 | 4.35 | 7.45 | 6.10 |

Table – 40: Mean Value for West Zone

| Question | Mean of the response | | |
|------------------------------|----------------------|---------|-------------|
| | Goa | Gujarat | Maharashtra |
| Purposes of using Technology | 4.40 | 6.49 | 23.47 |

Table – 41: Mean Value for North-East Zone

| Question | Mean of the response | | | | | |
|------------------------------|----------------------|-------|---------|---------|----------|--------|
| | Arunachal Pradesh | Assam | Manipur | Mizoram | Nagaland | Sikkim |
| Purposes of using Technology | 13.73 | 21.14 | 11.84 | 30.36 | 19.41 | 22.71 |

Table – 42: Mean Value for Central Zone

| Question | Mean of the response | | | |
|------------------------------|----------------------|----------------|---------------|-------------|
| | Chhattisgarh | Madhya Pradesh | Uttar Pradesh | Uttarakhand |
| Purposes of using Technology | 17.54 | 6.65 | 16.44 | 21.63 |

From the above analysis, it can be seen that for Jammu & Kashmir, the value is 19.05 which means that the respondents have used the technology for two purposes which could be a combination of any two. Punjab, Rajasthan and Delhi stands at second, third and fourth position respectively. Haryana, Himachal Pradesh and Chandigarh have used technology for any single purpose. In the south zone, a combination of any two purposes have been used by the respondents from Karnataka, Puducherry and Tamil Nadu whereas the respondents from the other state have used technology for any single purpose. Respondents from Bihar and Maharashtra have used technology for three purposes simultaneously in their respective zones while the other states have used the same for any single purpose. In the north-east, Mizoram, Sikkim and Assam have used the technology for three purposes whereas the other three states have used the same for two purposes. In the central zone, respondents from Uttarakhand have used technology for three purposes while Chhattisgarh and Uttar Pradesh have used it for two purposes followed by Madhya Pradesh where it has been used for a single purpose.

Table – 43: Ranking of the States

| Ranking | Zones | | | | | |
|---------------|------------|----------------|-------------|-------------|-------------------|----------------|
| | North | South | East | West | North-East | Central |
| First | J&K | Puducherry | Bihar | Maharashtra | Mizoram | Uttarakhand |
| Second | Rajasthan | Telangana | Odisha | Gujarat | Sikkim | Chhattisgarh |
| Third | Punjab | Karnataka | West Bengal | Goa | Assam | Uttar Pradesh |

| Fifth | Haryana | | | | | |

Quality of Improvement – Three Point Likert Scale

In this section, the quality of improvement have been assessed on different attributes. In addition, the overall quality has also been assessed. Respondents rated each question on a three point scale. For each attribute, an average score has been computed for all respondents from each State using the numeric values of 1-0 where 1 represents the best and 0 represents the worst outcome respectively. Assuming equal weights for each question, an average score was computed over all the questions:

Table – 44: Mean Value for North Zone

| Question | Mean of the response (on a 3 point Likert Scale) | | | | | | |
|--|--|-------------|-------------|-------------|-------------|-------------|-------------|
| | Haryana | H.P | J&K | Punjab | Rajasthan | Delhi | Chandigarh |
| Awareness in using a mobile phone | 1.00 | 0.99 | 0.98 | 1.00 | 1.01 | 1.00 | 1.00 |
| Awareness in performing balance enquiry | 1.00 | 1.00 | 0.99 | 0.99 | 1.00 | 1.03 | 1.00 |
| Conduct of periodic assessments | 1.06 | 1.42 | 0.58 | 1.29 | 1.09 | 1.30 | 0.98 |
| Power supply in the class | 1.00 | 1.003 | 0.98 | 1.00 | 1.04 | 1.00 | 1.01 |
| Availability of internet facility at training center | 1.00 | 1.09 | 0.96 | 1.06 | 1.05 | 1.00 | 1.00 |
| Response of the trainer to your queries | 1.00 | 1.00 | 1.00 | 1.00 | 1.05 | 1.00 | 1.00 |
| Availability of hands on training session with mobile/laptops/ computers | 1.00 | 0.90 | 0.95 | 1.00 | 1.05 | 1.00 | 1.00 |
| Grand Mean | 1.00 | 1.05 | 0.92 | 1.04 | 1.04 | 1.04 | 0.99 |

In the above table, Haryana is placed in the first position thereby implying that all the respondents from this state agreed to have the highest quality improvement on the above attributes after attending the training. Chandigarh and Jammu & Kashmir are in second and third place respectively depicting the quality of improvement close to good. The other states represent the quality of improvement between good and satisfactory.

Table – 45: Mean Value for South Zone

| Question | Mean of the response (on a 3 point Likert Scale) | | | | | |
|---|--|-------------|-------------|-------------|-------------|-------------|
| | Andhra Pradesh | Karnataka | Kerala | Puducherry | Tamil Nadu | Telangana |
| Awareness in using a mobile phone | 1.00 | 1.14 | 1.00 | 1.00 | 1.43 | 1.05 |
| Awareness in performing balance enquiry | 1.00 | 1.01 | 1.00 | 1.08 | 1.42 | 1.01 |
| Conduct of periodic assessment | 1.00 | 1.09 | 1.00 | 1.08 | 1.51 | 1.19 |
| Power supply in the class | 1.00 | | 1.00 | 1.08 | 1.63 | 1.03 |
| Availability of internet facility at training center | 1.00 | 1.06 | 1.00 | 1.08 | 1.64 | 1.03 |
| Response of the trainer to your queries | 1.00 | 1.10 | 1.00 | 1.25 | 1.63 | 1.04 |
| Availability of hands on training session with mobile/ laptops/ computers | 1.00 | 1.06 | 1.00 | 1.11 | 1.63 | 1.04 |
| Grand Mean | 1.00 | 1.07 | 1.00 | 1.09 | 1.55 | 1.05 |

In the south zone, the state of Andhra Pradesh and Kerala shares the same position with an average value of 1, thereby representing highest quality improvement of the respondents after attending the training. Telangana, Karnataka, Puducherry and Karnataka secures the second, third, fourth and fifth position respectively in the table.

Table – 46: Mean Value for East Zone

| Question | Mean of the response (on a 3 point Likert Scale) | | | |
|---|--|-------------|-------------|-------------|
| | Bihar | Jharkhand | Odisha | West Bengal |
| Awareness in using a mobile phone | 1.04 | 1.00 | 1.00 | 1.20 |
| Awareness in performing balance enquiry | 0.99 | 1.00 | 1.00 | 1.18 |
| Conduct of periodic assessment | 1.05 | 1.01 | 1.42 | 1.32 |
| Power supply in the class | 1.01 | 1.00 | 1.00 | 1.12 |
| Availability of internet facility at training center | 1.01 | 1.00 | 1.02 | 1.07 |
| Response of the trainer to your queries | 1.01 | 1.00 | 1.02 | 1.08 |
| Availability of hands on training session with mobile/ laptops/ computers | 1.01 | 1.00 | 1.02 | 1.17 |
| Grand Mean | 1.01 | 1.00 | 1.06 | 1.16 |

From the above table, it can be seen that Jharkhand tops the east zone with a slight margin over Bihar indicating the highest quality improvement of the respondents after attending the training. On the other hand, the quality of improvement is between good and satisfactory for the states of Odisha and West Bengal.

Table – 47: Mean Value for West Zone

| Question | Mean of the response (on a 3 point Likert Scale) | | |
|---|--|-------------|-------------|
| | Goa | Gujarat | Maharashtra |
| Awareness in using a mobile phone | 1.00 | 1.04 | 1.10 |
| Awareness in performing balance enquiry | 1.00 | 1.00 | 0.99 |
| Conduct of periodic assessment | 1.00 | 1.49 | 1.00 |
| Power supply in the class | 1.00 | 1.00 | 1.00 |
| Availability of internet facility at training center | 1.00 | 1.00 | 0.99 |
| Response of the trainer to your queries | 1.00 | 1.00 | 0.99 |
| Availability of hands on training session with mobile/laptops/computers | 1.00 | 1.01 | 0.99 |
| Grand Mean | 1.00 | 1.07 | 1.00 |

In the west zone, Goa and Maharashtra jointly secures the first place which indicates the good quality of improvement among the respondents after attending the training followed by Gujarat where the quality of improvement is satisfactory.

Table – 48: Mean Value for North-East Zone

| Question | Mean of the response (on a 3 point Likert Scale) | | | | | |
|---|--|-------------|-------------|-------------|-------------|-------------|
| | Arunachal Pradesh | Assam | Manipur | Mizoram | Nagaland | Sikkim |
| Awareness in using a mobile phone | 0.97 | 1.22 | 1.04 | 1.00 | 1.80 | 1.15 |
| Awareness in performing balance enquiry | 0.98 | 1.05 | 1.01 | 1.00 | 1.00 | 1.00 |
| Conduct of periodic assessment | 0.75 | 0.86 | 1.22 | 1.00 | 1.00 | 1.07 |
| Power supply in the class | 0.99 | 1.02 | 1.15 | 0.98 | 1.00 | 1.00 |
| Availability of internet facility at training center | 0.93 | 1.66 | 1.20 | 0.98 | 1.09 | 1.11 |
| Response of the trainer to your queries | 0.94 | 1.08 | 1.19 | 0.97 | 1.09 | 1.02 |
| Availability of hands on training session with mobile/ laptops/ computers | 0.98 | 1.08 | 1.22 | 1.00 | 1.07 | 1.09 |
| Grand Mean | 0.93 | 1.13 | 1.14 | 0.99 | 1.15 | 1.06 |

From the above table, it can be said that Mizoram is having a good quality of improvement after attending the training followed by Arunachal Pradesh. States like Assam, Manipur, Nagaland, Sikkim experienced a level of quality improvement between good and satisfactory.

Table – 49: Mean Value for Central Zone

| Question | Mean of the response (on a 3 point Likert Scale) | | | |
|---|--|----------------|---------------|-------------|
| | Chhattisgarh | Madhya Pradesh | Uttar Pradesh | Uttarakhand |
| Awareness in using a mobile phone | 1.05 | 1.02 | 1.22 | 1.03 |
| Awareness in performing balance enquiry | 1.00 | 1.00 | 0.99 | 1.01 |
| Conduct of periodic assessment | 1.05 | 1.08 | 1.09 | 1.10 |
| Power supply in the class | 1.00 | 1.00 | 1.02 | 1.07 |
| Availability of internet facility at training center | 1.33 | 1.02 | 1.02 | 1.32 |
| Response of the trainer to your queries | 1.01 | 1.00 | 1.02 | 1.11 |
| Availability of hands on training session with mobile/ laptops/ computers | 1.15 | 1.02 | 1.03 | 1.27 |
| Grand Mean | 1.08 | 1.02 | 1.05 | 1.13 |

In the central zone, the average response on quality of improvement is between good and satisfactory for all the States with Madhya Pradesh on the top followed by Uttar Pradesh, Chhattisgarh and Uttarakhand.

Thus, all the States, taken together in a single table, can be represented and ranked based on the grand mean value of the overall quality of improvement.

Table – 50: Ranking of the States

| Ranking | Zones | | | | | |
|---------|------------------|----------------|-------------|-------------|-------------------|----------------|
| | North | South | East | West | North-East | Central |
| First | Haryana | Andhra Pradesh | Jharkhand | Goa | Mizoram | Madhya Pradesh |
| | | Kerala | | Maharashtra | | |
| Second | Chandigarh | Telangana | Bihar | Gujarat | Arunachal Pradesh | Uttar Pradesh |
| Third | Jammu & Kashmir | Karnataka | Odisha | | Sikkim | Chhattisgarh |
| Fourth | Punjab | Puducherry | West Bengal | | Assam | Uttarakhand |
| | Rajasthan | Tamil Nadu | | | Manipur | |
| | Delhi | | | | Nagaland | |
| Fifth | Himachal Pradesh | | | | | |

Frequency of usage of computers – Four Point Likert Scale

In this section, the quality of improvement have been assessed on different attributes. In addition, the overall quality has also been assessed. Respondents rated each question on a three point scale. For each attribute, an average score has been computed for all respondents from each State using the numeric values of 1-4 where 1 represents the highest and 4 represents the least improvement in the quality of outcome respectively. Assuming equal weights for each question, an average score was computed over all the questions.

Table – 51: Mean Value for North Zone

| Question | Mean of the response (on a 4 point Likert Scale) | | | | | | |
|---------------------------------|--|------|------|--------|-----------|-------|------------|
| | Haryana | H.P | J&K | Punjab | Rajasthan | Delhi | Chandigarh |
| Frequency of usage of computers | 1.85 | 2.99 | 2.05 | 2.29 | 2.31 | 2.66 | 2.32 |

In the north zone, respondents from Haryana has an usage of computer between frequent and not so frequent. For the other states, the usage of computer is between not so frequent and rare.

Table – 51: Mean Value for South Zone

| Question | Mean of the response (on a 4 point Likert Scale) | | | | | |
|---------------------------------|--|-----------|--------|------------|------------|-----------|
| | Andhra Pradesh | Karnataka | Kerala | Puducherry | Tamil Nadu | Telangana |
| Frequency of usage of computers | 2.71 | 2.62 | 2.20 | 2.16 | 2.66 | 2.71 |

In this zone, all the states have a computer use level between not so frequent and rare with Puducherry on the top with an use close to not so frequent.

Table – 52: Mean Value for East Zone

| Question | Mean of the response (on a 4 point Likert Scale) | | | |
|---------------------------------|--|-----------|--------|-------------|
| | Bihar | Jharkhand | Odisha | West Bengal |
| Frequency of usage of computers | 2.02 | 2.96 | 2.76 | 2.44 |

All the states in the east zone have a computer use level between not so frequent and rare with Bihar having the highest usage level and Jharkhand having almost not so frequent usage level.

Table – 53: Mean Value for West Zone

| Question | Mean of the response (on a 4 point Likert Scale) | | |
|---------------------------------|--|---------|-------------|
| | Goa | Gujarat | Maharashtra |
| Frequency of usage of computers | 2.50 | 2.84 | 2.64 |

All the states in the west zone are having a computer usage level between not so frequent and rare with Goa having the most use and Gujarat having the least use.

Table – 54: Mean Value for North-East Zone

| Question | Mean of the response (on a 4 point Likert Scale) | | | | | |
|---------------------------------|--|-------|---------|---------|----------|--------|
| | Arunachal Pradesh | Assam | Manipur | Mizoram | Nagaland | Sikkim |
| Frequency of usage of computers | 1.73 | 2.41 | 2.20 | 1.74 | 2.90 | 2.37 |

In the above table, it is seen that the respondents from Arunachal Pradesh is in the top in the North-East zone with a computer usage level between very frequent and frequent followed by

Mizoram. States like Assam, Manipur, Nagaland and Sikkim are having an usage level between frequent and not so frequent.

Table – 55: Mean Value for Central Zone

| Question | Mean of the response (on a 4 point Likert Scale) | | | |
|---------------------------------|--|----------------|---------------|-------------|
| | Chhattisgarh | Madhya Pradesh | Uttar Pradesh | Uttarakhand |
| Frequency of usage of computers | 2.65 | 3.10 | 2.86 | 2.21 |

Uttarakhand, in the central zone, is having the most usage of computer with a level close to frequent whereas Madhya Pradesh stands in the bottom most with a computer usage level between not so frequent and rare.

A ranking of all the States taken together on frequency of usage of computer is shown in the following table:

Table – 56: Ranking of the States

| Ranking | Zone wise Frequency of usage of computer | | | | | |
|---------|--|-----------------------------|-------------|-------------|-------------------|----------------|
| | North | South | East | West | North-East | Central |
| First | Haryana | Puducherry | Bihar | Goa | Arunachal Pradesh | Uttarakhand |
| Second | Jammu & Kashmir | Karnataka | Odisha | Maharashtra | Mizoram | Chhattisgarh |
| Third | Punjab | Kerala | West Bengal | Gujarat | Manipur | Uttar Pradesh |
| Fourth | Rajasthan | Tamil Nadu | Jharkhand | | Sikkim | Madhya Pradesh |
| Fifth | Chandigarh | Andhra Pradesh Telangana | | | Assam | |
| Sixth | Delhi | | | | Nagaland | |
| Seventh | Himachal Pradesh | | | | | |

Difficulties faced during the training – Four Point Likert Scale

In this section, the quality of improvement has been assessed on different attributes. In addition, the overall quality has also been assessed. Respondents rated each question on a three point scale. For each attribute, an average score has been computed for all respondents from each State using the numeric values of 1-0 where 1 represents very much difficulties faced and 0 represents no difficulties faced at all respectively. Assuming equal weights for each question, an average score was computed over all the questions.

Table – 57: Mean Value for North Zone

| Question | Mean of the response (on a 4 point Likert Scale) | | | | | | |
|--|--|------|------|--------|-----------|-------|------------|
| | Haryana | H.P | J&K | Punjab | Rajasthan | Delhi | Chandigarh |
| Difficulties faced during the training | 0.01 | 0.03 | 0.04 | 0.00 | 0.53 | 0.00 | 0.00 |

In the north zone, Punjab, Delhi and Chandigarh shares the first position with no difficulties faced during the training whereas it is almost zero for Haryana, Himachal Pradesh and Jammu & Kashmir.

Table – 58: Mean Value for South Zone

| Question | Mean of the response (on a 4 point Likert Scale) | | | | | |
|--|--|-----------|--------|------------|------------|-----------|
| | Andhra Pradesh | Karnataka | Kerala | Puducherry | Tamil Nadu | Telangana |
| Difficulties faced during the training | 0.00 | 0.56 | 0.00 | 0.50 | 0.41 | 0.56 |

Andhra Pradesh and Kerala, in the south zone, have faced no difficulty during the training followed by Tamil Nadu, Puducherry, Karnataka and Telangana respectively with difficulty level faced between very much and a few.

Table – 59: Mean Value for East Zone

| Question | Mean of the response (on a 4 point Likert Scale) | | | |
|--|--|-----------|--------|-------------|
| | Bihar | Jharkhand | Odisha | West Bengal |
| Difficulties faced during the training | 0.18 | 0.00 | 0.00 | 0.39 |

In the east zone, respondents from Jharkhand and Odisha have experienced zero difficulty level during the training very frequent use of computer followed by Bihar and West Bengal respectively with a difficulty level between very much and a few..

Table – 60: Mean Value for West Zone

| Question | Mean of the response (on a 4 point Likert Scale) | | |
|--|--|---------|-------------|
| | Goa | Gujarat | Maharashtra |
| Difficulties faced during the training | 0.00 | 0.00 | 0.01 |

Goa and Gujarat jointly tops the south zone with no difficulties faced at all during the training slightly over Maharashtra.

Table – 61: Mean Value for North-East Zone

| Question | Mean of the response (on a 4 point Likert Scale) | | | | | |
|--|--|-------|---------|---------|----------|--------|
| | Arunachal Pradesh | Assam | Manipur | Mizoram | Nagaland | Sikkim |
| Difficulties faced during the training | 0.05 | 1.27 | 1.09 | 0.00 | 0.39 | 0.92 |

Mizoram, in the north-east zone, is having a zero difficulty level faced by the respondents followed by Arunachal Pradesh and Nagaland. While the difficulty level faced during the training in Sikkim is very close to a few, it is between a few and rare for Assam and Manipur.

Table – 62: Mean Value for Central Zone

| Question | Mean of the response (on a 4 point Likert Scale) | | | |
|--|--|----------------|---------------|-------------|
| | Chhattisgarh | Madhya Pradesh | Uttar Pradesh | Uttarakhand |
| Difficulties faced during the training | 2.65 | 0.04 | 0.36 | 0.38 |

In the central zone, the difficulty level faced during the training is almost zero for Madhya Pradesh followed by Uttar Pradesh, Uttarakhand and Chhattisgarh respectively.

A ranking of all the States taken together on frequency of usage of computer is shown in the following table:

Table – 63: Ranking of the States

Ranking of the Zones

| Ranking | Difficulties faced during the training (Zone wise) | | | | | |
|---------|--|----------------|-----------|-------------|-------------------|---------------------|
| | North | South | East | West | North-East | Central |
| First | Delhi | Andhra Pradesh | Jharkhand | Goa | Mizoram | Madhya Pradesh |
| | Punjab | Kerala | Odisha | Gujarat | | |
| | Chandigarh | | | | | |
| Second | Haryana | Tamil Nadu | Bihar | Maharashtra | Arunachal Pradesh | Uttar Pradesh |
| Third | Himachal Pradesh | Puducherry | | | Nagaland | Uttarakhand Pradesh |
| Fourth | Jammu & Kashmir | Tamil Nadu | | | Sikkim | Chhattisgarh |
| Fifth | Rajasthan | Karnataka | | | Manipur | |
| | | Telangana | | | | |
| Sixth | | | | | Assam | |
| Seventh | | | | | | |

Table – 64: Case – 1: Quality of improvement in a five point Likert scale

| Question | Quality of improvement in a five point Likert scale (Mean Value) | | | | | | |
|--|--|-------------|-------------|-------------|-------------|-------------|-------------|
| | North | South | East | West | Central | North-East | Grand Mean |
| Level of comfort in connecting Wi-Fi in Smart Phone | 1.16 | 1.34 | 0.86 | 0.93 | 1.55 | 1.32 | |
| Level of comfort in making video calls | 1.47 | 1.56 | 1.56 | 1.35 | 1.63 | 1.51 | |
| Ease of accessing social networking sites | 1.07 | 1.37 | 1.42 | 1.09 | 1.46 | 1.32 | |
| Reporting a grievance to the Local Government using mobile/computer | 0.21 | 0.38 | 0.15 | 0.36 | 0.20 | 0.23 | |
| Nature of assessment | 1.52 | 1.47 | 1.71 | 1.32 | 1.68 | 1.64 | |
| Level of confidence in using digital devices After the training | 1.46 | 1.59 | 1.74 | 1.36 | 1.83 | 1.63 | |
| Accessing website(s)/ portal(s) to search for Govt. Welfare Schemes/ Crop Prices/ Jobs etc | 1.18 | 1.45 | 1.67 | 1.07 | 1.92 | 1.22 | |
| Educating Others (family, friends etc.) about the use of IT | 1.53 | 1.70 | 1.97 | 1.46 | 2.05 | 1.43 | |
| Recommending the training to your family members / friends | 1.51 | 1.58 | 1.90 | 1.31 | 1.69 | 1.42 | |
| Grand Mean | 1.23 | 1.38 | 1.44 | 1.14 | 1.56 | 1.30 | 1.30 |

Table – 65: Case – 2: Quality of improvement in a five point Likert scale

| Question | Quality of improvement in a five point Likert scale (Mean Value) | | | | | |
|--|--|-------------|-------------|-------------|-------------|-------------|
| | North | South | East | West | Central | North-East |
| Level of satisfaction with the computers/laptops available during the training | 2.56 | 2.29 | 2.02 | 2.30 | 1.86 | 2.19 |
| Level of ease in using computer after training | 2.59 | 2.32 | 2.30 | 2.48 | 2.37 | 2.41 |
| Level of ease in using mobiles after training | 1.59 | 1.76 | 1.67 | 1.57 | 1.95 | 1.89 |
| Grand Mean | 2.25 | 2.12 | 2.00 | 2.12 | 2.06 | 2.16 |

Thus, all the cases taken together, the position of the zones can be shown in a descending order with best performing state in the first position followed by second, third and so on for each of the 23 questions on which analysis was performed.

Analysis on purpose of attending the training

The respondents from all the professions across the six zones were asked to state the purpose for which they had attended the training. The values for the purpose of attending the training are as follows:

- To confidently use computers/ mobile phones / tablets / internet – 1
- To get a new job/ promotion in the existing job – 2
- To learn new skills online – 3
- Others – 4

Based on the response, the frequency of the most repeated purpose, i.e., the mode value, for each profession has been calculated. This is shown in the following table:

Table – 72: Frequency Value for each Profession

| Professions | | | | | | | | | | | | |
|--|---------|--------|--------|-------------------------|-----------------------|---------|--------------------|---------------|--------|------------|-------------------------|---------------|
| | Student | Farmer | Trader | Service Sector Employee | Asha/Anganwadi Worker | Teacher | Government Servant | Self-Employed | Others | House Wife | Private Sector Employee | Wage Labourer |
| MODE Purpose of attending the training | 1 | 1 | 1 | 1 | 1 | 1 | 11 | 1 | 1 | 1 | 11 | 1 |

Mean value has also been calculated on the details of the respondent collected through telephonic survey. Below shown are the results:

Table – 73: Case – 8: Percentage of beneficiaries (Mean Value)

| | Zones | | | | | |
|--------------------|--------------|--------------|--------------|--------------|--------------|--------------|
| | North | South | East | West | Central | North-East |
| Male | 53.58 | 45.48 | 56.59 | 53.64 | 51.69 | 47.01 |
| Female | 46.42 | 54.51 | 43.40 | 46.34 | 48.30 | 52.99 |
| Transgender | 0 | 0 | 0 | 0.01 | 0 | 0 |
| Total Mean | 33.33 | 33.33 | 33.33 | 33.33 | 33.33 | 33.33 |

Table – 74: Case – 9: Age distribution of beneficiaries (%) (Mean Value)

| Age Group | Zones | | | | | | | | | | | | | | | | | |

Spearman's Correlation Test

In this section, correlation test has been performed to find out the nature of impact of various independent variables on the level of confidence in using digital devices. The exercise has been done for all the six zones by using SAS analytical tool.

Case – 1

Dependent variable: Level of confidence in using digital devices after the training

(Im_{confi})

Independent variables:

- Level of comfort in connecting Wi-Fi in Smart Phone (M_{Wi-Fi})
- Level of comfort in making video calls (M_{VC})
- Accessing website(s)/ portal(s) to search for Govt. Welfare Schemes/Crop Prices/Jobs etc. (Im_{access})
- Educating Others (family, friends etc.) about the use of IT (Im_{edu})
- Recommending the training to your family members / friends (Im_{rec})
- Nature of assessment ($Tr_{quality}$)

North Zone

| Im_{access} | 11452 | 1.47965 | 0.88211 | 2.00000 | 0 | 4.00000 |
| Im_{edu} | 11452 | 1.74048 | 1.05481 | 2.00000 | 0 | 4.00000 |
| Im_{rec} | 11452 | 1.57300 | 0.95447 | 2.00000 | 0 | 4.00000 |
| $Tr_{quality}$ | 11452 | 1.61544 | 0.69533 | 2.00000 | 0 | 4.00000 |

Table – 85: Correlation Coefficient for North Zone

| Spearman Correlation Coefficients, N = 11452, Prob > r under H0: Rho=0 | | | | | | |
|--|-------------------|-------------------|-------------------|-------------------|-------------------|-------------------|
| | M_{Wi-Fi} | M_{VC} | Im_{access} | Im_{edu} | Im_{rec} | $Tr_{quality}$ |
| Im_{confi} | 0.69690 <.0001 | 0.66055 <.0001 | 0.85559 <.0001 | 0.72253 <.0001 | 0.66633 <.0001 | 0.70263 <.0001 |

From the above analysis, it can be seen that the level of confidence in using digital devices after the training (Im_{confi}) is positively correlated with all the independent variables. However, the degree of positive correlation varies among the independent variables.

Im_{access} with a r value of 0.8559 implies that the ease of accessing website(s)/ portal(s) to search for Govt. Welfare Schemes/ Crop Prices/ Jobs etc., has the highest impact on the level of confidence in using digital devices after the training followed by the independent variable “Educating Others” and so on. The degree of positive correlation of the independent variables with the dependent variable is shown in the following table:

Table – 86: Degree of Association among variables in North Zone

| Dependent Variable | Independent Variables | r (value) | Degree |
|--------------------|-----------------------|-----------|-------------|
| Im_{confi} | Im_{access} | 0.85559 | Very Strong |
| | Im_{edu} | 0.72253 | Strong |
| | $Tr_{quality}$ | 0.70263 | Strong |
| | M_{Wi-Fi} | 0.69690 | Strong |
| | Im_{rec} | 0.66633 | Strong |
| | M_{VC} | 0.66055 | Strong |

Thus it can be said that table Im_{Access} is very strongly correlated and M_{VC} is least strongly correlated with the dependent variable.

South Zone

| | |
|--------------------------|--|
| 1 With Variables: | <i>Im_{confi}</i> |
| 6 Variables: | <i>M_{Wi-Fi} M_{VC} Im_{access} Im_{edu} Im_{rec} Tr_{quality}</i> |

Table – 87: Simple Statistics for South Zone

| Simple Statistics | | | | | | |
|-----------------------------|-------|---------|---------|---------|---------|---------|
| Variable | N | Mean | Std Dev | Median | Minimum | Maximum |
| <i>Im_{confi}</i> | 11071 | 1.84627 | 0.57124 | 2.00000 | 0 | 4.00000 |
| <i>M_{Wi-Fi}</i> | 11071 | 1.72261 | 1.08829 | 2.00000 | 0 | 4.00000 |
| <i>M_{VC}</i> | 11071 | 1.76073 | 0.85324 | 2.00000 | 0 | 4.00000 |
| <i>Im_{access}</i> | 11071 | 1.89107 | 0.71382 | 2.00000 | 0 | 4.00000 |
| <i>Im_{edu}</i> | 11071 | 1.95691 | 0.70323 | 2.00000 | 0 | 4.00000 |
| <i>Im_{rec}</i> | 11071 | 1.84979 | 0.66335 | 2.00000 | 0 | 4.00000 |
| <i>Tr_{quality}</i> | 11071 | 1.69777 | 0.64789 | 2.00000 | 0 | 4.00000 |

Table – 88: Correlation Coefficient for South Zone

| Spearman Correlation Coefficients, N = 11071, Prob > r under H0: Rho=0 | | | | | | |
|--|--------------------------|-----------------------|----------------------------|-------------------------|-------------------------|-----------------------------|
| | <i>M_{Wi-Fi}</i> | <i>M_{VC}</i> | <i>Im_{access}</i> | <i>Im_{edu}</i> | <i>Im_{rec}</i> | <i>Tr_{quality}</i> |
| <i>Im_{confi}</i> | 0.43892 <.0001 | 0.33672 <.0001 | 0.86499 <.0001 | 0.78069 <.0001 | 0.71152 <.0001 | 0.60189 <.0001 |

In the south zone, all the independent variables are positively correlated with the dependent variable thereby implying that an increase in any of the independent variable will lead to an increase in the dependent variable and vice versa. The ease of accessing website(s)/ portal(s) to search for Govt. Welfare Schemes/ Crop Prices/Jobs etc., has the highest impact on the level of confidence in using digital devices after the training. The degree of positive correlation of the independent variables with the dependent variable is shown in the following table:

Table – 89: Degree of Association among Variables for South Zone

| Dependent Variable | Independent Variables | r (value) | Degree |
|---------------------------|------------------------------|------------------|---------------|
| <i>Im_{confi}</i> | <i>Im_{access}</i> | 0.86499 | Very Strong |
| | <i>Im_{edu}</i> | 0.78069 | Strong |
| | <i>Im_{rec}</i> | 0.71152 | Strong |
| | <i>Tr_{quality}</i> | 0.60189 | Strong |
| | <i>M_{Wi-Fi}</i> | 0.43892 | Moderate |
| | <i>M_{VC}</i> | 0.33672 | Moderate |

East Zone

| | |
|--------------------------|--|
| 1 With Variables: | <i>Im_{confi}</i> |
| 6 Variables: | <i>M_{Wi-Fi} M_{VC} Im_{access} Im_{edu} Im_{rec} Tr_{quality}</i> |

Table – 90: Simple Statistics for East Zone

| Simple Statistics | | | | | | |
|-----------------------------|-------|---------|---------|---------|---------|---------|
| Variable | N | Mean | Std Dev | Median | Minimum | Maximum |
| <i>Im_{confi}</i> | 12814 | 1.58506 | 0.58003 | 2.00000 | 0 | 4.00000 |
| <i>M_{Wi-Fi}</i> | 12814 | 1.37131 | 0.94471 | 2.00000 | 0 | 4.00000 |
| <i>M_{VC}</i> | 12814 | 1.52825 | 0.75776 | 2.00000 | 0 | 4.00000 |
| <i>Im_{access}</i> | 12814 | 1.53832 | 0.62197 | 2.00000 | 0 | 4.00000 |
| <i>Im_{edu}</i> | 12814 | 1.78594 | 0.90705 | 2.00000 | 0 | 4.00000 |
| <i>Im_{rec}</i> | 12814 | 1.61940 | 0.77495 | 1.00000 | 0 | 4.00000 |
| <i>Tr_{quality}</i> | 12814 | 1.62338 | 0.60979 | 2.00000 | 0 | 4.00000 |

Table – 91: Correlation Coefficient for East Zone

| Spearman Correlation Coefficients, N = 12814, Prob > r under H0: Rho=0 | | | | | | |
|--|--------------------------|-----------------------|----------------------------|-------------------------|-------------------------|-----------------------------|
| | <i>M_{Wi-Fi}</i> | <i>M_{VC}</i> | <i>Im_{access}</i> | <i>Im_{edu}</i> | <i>Im_{rec}</i> | <i>Tr_{quality}</i> |
| <i>Im_{confi}</i> | 0.77501 <.0001 | 0.74530 <.0001 | 0.84358 <.0001 | 0.82363 <.0001 | 0.71745 <.0001 | 0.81541 <.0001 |

For the east zone, there exists a positive relation between the independent variables and the dependent variable with ease of accessing website(s)/ portal(s) to search for Govt. Welfare Schemes/ Crop Prices/Jobs etc., having the highest impact on the level of confidence in using digital devices after the training. The degree of positive correlation of the independent variables with the dependent variable is shown in the following table:

Table 92: Degree of Association among Variables for East Zone

| Dependent Variable | Independent Variables | r (value) | Degree |
|---------------------------|------------------------------|------------------|---------------|
| <i>Im_{confi}</i> | <i>Im_{access}</i> | 0.84358 | Very Strong |
| | <i>Im_{edu}</i> | 0.82363 | Very Strong |
| | <i>Tr_{quality}</i> | 0.81541 | Very Strong |
| | <i>M_{Wi-Fi}</i> | 0.77501 | Strong |
| | <i>M_{VC}</i> | 0.74530 | Strong |
| | <i>Im_{rec}</i> | 0.71745 | Strong |

West Zone

| | |
|--------------------------|---|
| 1 With Variables: | Im_{confi} |
| 6 Variables: | M_{Wi-Fi} M_{VC} Im_{access} Im_{edu} Im_{rec} $Tr_{quality}$ |

Table – 93: Simple Statistics for West Zone

| Simple Statistics | | | | | | |
|-------------------|------|---------|---------|---------|---------|---------|
| Variable | N | Mean | Std Dev | Median | Minimum | Maximum |
| Im_{confi} | 3118 | 1.36466 | 0.54868 | 1.00000 | 0 | 4.00000 |
| M_{Wi-Fi} | 3118 | 1.21232 | 0.97933 | 1.00000 | 0 | 4.00000 |
| M_{VC} | 3118 | 1.35728 | 0.94405 | 1.00000 | 0 | 4.00000 |
| Im_{access} | 3118 | 1.27133 | 1.25258 | 1.00000 | 0 | 4.00000 |
| Im_{edu} | 3118 | 1.49551 | 0.89583 | 1.00000 | 0 | 4.00000 |
| Im_{rec} | 3118 | 1.31302 | 0.49718 | 1.00000 | 0 | 4.00000 |
| $Tr_{quality}$ | 3118 | 1.34894 | 0.58654 | 1.00000 | 0 | 4.00000 |

Table – 94: Correlation Coefficient for West Zone

| Spearman Correlation Coefficients, N = 3118, Prob > r under H0: Rho=0 | | | | | | |
|---|-------------------|-------------------|-------------------|-------------------|-------------------|-------------------|
| | M_{Wi-Fi} | M_{VC} | Im_{access} | Im_{edu} | Im_{rec} | $Tr_{quality}$ |
| Im_{confi} | 0.43644 <.0001 | 0.39941 <.0001 | 0.68325 <.0001 | 0.77880 <.0001 | 0.80165 <.0001 | 0.74819 <.0001 |

In the west zone, a positive correlation exists between the dependent and the independent variables. However, the level of dependency of the level of confidence in using digital

devices after the training is highest on the independent variable “Recommending the training programme to your family members/friends”.

The following table shows the degree of correlation among the dependent and the independent variables:

Table – 95: Degree of Association among Variables for West Zone

| Dependent Variable | Independent Variables | r (value) | Degree |
|---------------------------|-----------------------------|-----------|-------------|
| <i>Im_{confi}</i> | <i>Im_{rec}</i> | 0.80165 | Very Strong |
| | <i>Im_{edu}</i> | 0.77880 | Strong |
| | <i>Tr_{quality}</i> | 0.74819 | Strong |
| | <i>Im_{access}</i> | 0.68325 | Strong |
| | <i>M_{Wi-Fi}</i> | 0.43644 | Moderate |
| | <i>M_{VC}</i> | 0.39941 | Moderate |

Central Zone

| | |
|--------------------------|--|
| 1 With Variables: | <i>Im_{confi}</i> |
| 6 Variables: | <i>M_{Wi-Fi} M_{VC} Im_{access} Im_{edu} Im_{rec} Tr_{quality}</i> |

Table – 96: Simple Statistics for Central Zone

| Simple Statistics | | | | | | |
|-----------------------------|-------|---------|---------|---------|---------|---------|
| Variable | N | Mean | Std Dev | Median | Minimum | Maximum |
| <i>Im_{confi}</i> | 10123 | 1.55567 | 0.66894 | 1.00000 | 0 | 4.00000 |
| <i>M_{Wi-Fi}</i> | 10123 | 1.62373 | 0.87805 | 2.00000 | 0 | 4.00000 |
| <i>M_{VC}</i> | 10123 | 1.80352 | 1.10719 | 2.00000 | 0 | 4.00000 |
| <i>Im_{access}</i> | 10123 | 1.66067 | 0.99849 | 1.00000 | 0 | 4.00000 |
| <i>Im_{edu}</i> | 10123 | 1.42645 | 0.63830 | 1.00000 | 0 | 4.00000 |
| <i>Im_{rec}</i> | 10123 | 1.16823 | 0.98870 | 1.00000 | 0 | 4.00000 |
| <i>Tr_{quality}</i> | 10123 | 1.35592 | 0.84343 | 1.00000 | 0 | 4.00000 |

Table – 97: Correlation Coefficient for Central Zone

| Spearman Correlation Coefficients, N = 10123, Prob > r under H0: Rho=0 | | | | | | |
|--|--------------------------|-----------------------|----------------------------|-------------------------|-------------------------|-----------------------------|
| | <i>M_{Wi-Fi}</i> | <i>M_{VC}</i> | <i>Im_{access}</i> | <i>Im_{edu}</i> | <i>Im_{rec}</i> | <i>Tr_{quality}</i> |
| <i>Im_{confi}</i> | 0.49166 <.0001 | 0.37170 <.0001 | 0.78987 <.0001 | 0.59784 <.0001 | 0.54102 <.0001 | 0.66616 <.0001 |

A positive relation among the dependent and the independent variables is also prevalent for the central zone. In this case, the level of comfort in making video calls has the highest impact on of the level of confidence in using digital devices after the training and the degree of correlation is shown below:

Table – 98: Degree of Association among Variables for Central Zone

| Dependent Variable | Independent Variables | r (value) | Degree |
|---------------------------|------------------------------|------------------|---------------|
| <i>Im_{confi}</i> | <i>Im_{access}</i> | 0.78987 | Strong |
| | <i>Tr_{quality}</i> | 0.66616 | Moderate |
| | <i>Im_{edu}</i> | 0.59784 | Moderate |
| | <i>Im_{rec}</i> | 0.54102 | Moderate |
| | <i>M_{Wi-Fi}</i> | 0.49166 | Moderate |
| | <i>M_{VC}</i> | 0.37170 | Moderate |

North-East

| | |
|--------------------------|---|
| 1 With Variables: | Im_{confi} |
| 6 Variables: | M_{Wi-Fi} M_{VC} Im_{access} Im_{edu} Im_{rec} $Tr_{quality}$ |

Table – 99: Simple Statistics for North-East Zone

| Simple Statistics | | | | | | |
|-------------------|------|---------|---------|---------|---------|---------|
| Variable | N | Mean | Std Dev | Median | Minimum | Maximum |
| Im_{confi} | 1528 | 1.71073 | 0.80280 | 2.00000 | 0 | 4.00000 |
| M_{Wi-Fi} | 1528 | 1.47513 | 0.91950 | 2.00000 | 0 | 4.00000 |
| M_{VC} | 1528 | 1.56872 | 0.76206 | 1.00000 | 0 | 4.00000 |
| Im_{access} | 1528 | 1.43063 | 1.01806 | 2.00000 | 0 | 4.00000 |
| Im_{edu} | 1528 | 1.63351 | 1.02131 | 2.00000 | 0 | 4.00000 |
| Im_{rec} | 1528 | 1.60733 | 0.82860 | 1.00000 | 0 | 4.00000 |
| $Tr_{quality}$ | 1528 | 1.64791 | 0.76967 | 1.00000 | 0 | 4.00000 |

Table – 100: Correlation Coefficient for North-East Zone

| Spearman Correlation Coefficients, N = 1528, Prob > r under H0: Rho=0 | | | | | | |
|---|-------------------|-------------------|-------------------|-------------------|-------------------|-------------------|
| | M_{Wi-Fi} | M_{VC} | Im_{access} | Im_{edu} | Im_{rec} | $Tr_{quality}$ |
| Im_{confi} | 0.81042 <.0001 | 0.73619 <.0001 | 0.85156 <.0001 | 0.78269 <.0001 | 0.74034 <.0001 | 0.62321 <.0001 |

In north-east, the positive relation between the dependent and the independent variables continue to exist with ease of accessing website(s)/ portal(s) to search for Govt. Welfare

Schemes/ Crop Prices/Jobs etc. having the highest impact on the level of confidence in using digital devices after the training. Below table shows the degree of correlation:

Table – 101: Degree of Association among Variables for North-East Zone

| Dependent Variable | Independent Variables | r (value) | Degree |
|---------------------------|-----------------------------|-----------|-------------|
| <i>Im_{confi}</i> | <i>Im_{access}</i> | 0.85156 | Very Strong |
| | <i>M_{Wi-Fi}</i> | 0.81042 | Very Strong |
| | <i>Im_{edu}</i> | 0.78269 | Strong |
| | <i>Im_{rec}</i> | 0.74034 | Strong |
| | <i>M_{VC}</i> | 0.73619 | Strong |
| | <i>Tr_{quality}</i> | 0.62321 | Strong |

Thus based on the value of correlation for each of the independent variable, each of the six zones can be ranked in a descending order starting from the highest value. This is shown in the following table:

Table – 102: Rank of the Zones

| Independent variables | Ranking Order | Rank of the Zones |
|-----------------------------------|----------------------|--------------------------|
| <i>M_{Wi-Fi}</i> | First | North- East |
| | Second | East |
| | Third | North |
| | Fourth | Central |
| | Fifth | South |
| <i>M_{VC}</i> | First | North-East |
| | Second | North |
| | Third | West |
| | Fourth | Central |
| | Fifth | south |
| <i>Im_{access}</i> | First | South |
| | Second | North |
| | Third | North-East |
| | Fourth | East |
| | Fifth | Central |
| | Sixth | West |
| <i>Im_{edu}</i> | First | East |
| | Second | South |
| | Third | North |
| | Fourth | Central |

| Independent variables | Ranking Order | Rank of the Zones |
|-----------------------------|---------------|-------------------|
| <i>Im_{rec}</i> | First | West |
| | Second | North-East |
| | Third | East |
| | Fourth | South |
| | Fifth | North |
| | Sixth | Central |
| <i>Tr_{quality}</i> | First | East |
| | Second | West |
| | Third | North |
| | Fourth | Central |
| | Fifth | North-East |
| | Sixth | South |

Case – 2

Dependent variable: Level of satisfaction with digital devices available during training ($TrSAT$)

Independent variables:

- Level of ease in using computers/laptops after training (Im_{CEASE})
- Level of ease in using mobiles after training (Im_{MEASE})

North Zone

| | |
|--------------------------|---------------------------|
| 1 With Variables: | Tr_{sat} |
| 2 Variables: | Im_{CEASE} Im_{MEASE} |

Table – 103: Simple Statistics for North Zone

| Simple Statistics | | | | | | |
|-------------------|-------|---------|---------|---------|---------|---------|
| Variable | N | Mean | Std Dev | Median | Minimum | Maximum |
| Tr_{sat} | 11452 | 2.25297 | 0.68583 | 2.00000 | 1.00000 | 5.00000 |
| Im_{CEASE} | 11452 | 2.40080 | 0.62257 | 2.00000 | 1.00000 | 5.00000 |
| Im_{MEASE} | 11452 | 2.16119 | 0.90518 | 2.00000 | 1.00000 | 5.00000 |

Table – 104: Correlation Coefficient for North Zone

| Spearman Correlation Coefficients, N = 11452, Prob > r under H0: Rho=0 | | |
|--|----------------|----------------|
| | Im_{CEASE} | Im_{MEASE} |
| Tr_{sat} | 0.45326 <.0001 | 0.28298 <.0001 |

From the above analysis, it has been seen that the level of satisfaction with digital devices available during training ($TrSAT$) is positively correlated with both the independent variables which means that higher the level of ease in using computers/laptops and mobiles after training, higher is the level of confidence in using digital devices after training. However, the degree of positive correlation varies among the independent variables. This is shown in the following table:

Table – 105: Degree of Association among Variables for North Zone

| Dependent Variable | Independent Variables | r (value) | Degree |
|---------------------------|------------------------------|------------------|---------------|
| Tr_{sat} | Im_{CEASE} | 0.45326 | Moderate |
| | Im_{MEASE} | 0.28298 | Weak |

South Zone

| | |
|--------------------------|---------------------------|
| 1 With Variables: | Tr_{sat} |
| 2 Variables: | Im_{CEASE} Im_{MEASE} |

Table – 106: Simple Statistics for South Zone

| Simple Statistics | | | | | | |
|-------------------|-------|---------|---------|---------|---------|---------|
| Variable | N | Mean | Std Dev | Median | Minimum | Maximum |
| Tr_{sat} | 11071 | 2.16485 | 0.61817 | 2.00000 | 1.00000 | 5.00000 |
| Im_{CEASE} | 11071 | 2.26285 | 0.54757 | 2.00000 | 1.00000 | 5.00000 |
| Im_{MEASE} | 11071 | 1.97597 | 0.40185 | 2.00000 | 1.00000 | 5.00000 |

Table – 107: Correlation Coefficient for South Zone

| Spearman Correlation Coefficients, N = 11071, Prob > r under H0: Rho=0 | | |
|--|---------------|----------------|
| | Im_{CEASE} | Im_{MEASE} |
| Tr_{sat} | 0.60370<.0001 | 0.02273<0.0168 |

The above analysis shows that the level of satisfaction with digital devices available during training ($TrSAT$) is positively correlated with both the independent variables which means that higher the level of ease in using computers/laptops and mobiles after training, higher is the level of confidence in using digital devices after training. This is shown in the following table:

Table – 108: Degree of Association among Variables for South Zone

| Dependent Variable | Independent Variables | r (value) | Degree |
|--------------------|-----------------------|-----------|----------|
| Tr_{sat} | Im_{CEASE} | 0.60370 | Moderate |
| | Im_{MEASE} | 0.02273 | Weak |

East Zone

| | |
|--------------------------|---------------------------|
| 1 With Variables: | Tr_{sat} |
| 2 Variables: | Im_{CEASE} Im_{MEASE} |

Table – 109: Simple Statistics for East Zone

| Simple Statistics | | | | | | |
|-------------------|-------|---------|---------|---------|---------|---------|
| Variable | N | Mean | Std Dev | Median | Minimum | Maximum |
| Tr_{sat} | 12814 | 2.21118 | 0.63880 | 2.00000 | 1.00000 | 5.00000 |
| Im_{CEASE} | 12814 | 2.38161 | 0.61065 | 2.00000 | 1.00000 | 5.00000 |
| Im_{MEASE} | 12814 | 1.61620 | 0.62309 | 2.00000 | 1.00000 | 5.00000 |

Table – 110: Correlation Coefficient for East Zone

| Spearman Correlation Coefficients, N = 12814, Prob > r under H0: Rho=0 | | |
|--|----------------|-----------------|
| | Im_{CEASE} | Im_{MEASE} |
| Tr_{sat} | 0.45526 <.0001 | -0.26309 <.0001 |

For the east zone, there exists a positive correlation between the level of satisfaction with digital devices available during training and the level of ease in using computers/laptops after training whereas a negative correlation exists between the level of satisfaction with digital devices available during training and the level of ease in using mobiles after training. The degree of correlation is shown in the following table:

Table – 111: Degree of Association among Variables for East Zone

| Dependent Variable | Independent Variables | r (value) | Degree |
|--------------------|-----------------------|-----------|----------|
| Tr_{sat} | Im_{CEASE} | 0.45526 | Moderate |
| | Im_{MEASE} | - 0.26309 | Weak |

West Zone

| | |
|--------------------------|---------------------------|
| 1 With Variables: | Tr_{sat} |
| 2 Variables: | Im_{CEASE} Im_{MEASE} |

Table – 112: Simple Statistics for West Zone

| Simple Statistics | | | | | | |
|-------------------|------|---------|---------|---------|---------|---------|
| Variable | N | Mean | Std Dev | Median | Minimum | Maximum |
| Tr_{sat} | 3118 | 2.13278 | 0.59325 | 2.00000 | 1.00000 | 5.00000 |
| Im_{CEASE} | 3118 | 2.32425 | 0.61455 | 2.00000 | 1.00000 | 5.00000 |
| Im_{MEASE} | 3118 | 1.89256 | 0.38039 | 2.00000 | 1.00000 | 5.00000 |

Table – 113: Correlation Coefficient for East Zone

| Spearman Correlation Coefficients, N = 3118, Prob > r under H0: Rho=0 | | |
|---|----------------|----------------|
| | Im_{CEASE} | Im_{MEASE} |
| Tr_{sat} | 0.11395 <.0001 | 0.20532 <.0001 |

In the west zone, the level of satisfaction with digital devices available during training (Tr_{SAT}) is positively correlated with both the independent variables which means that higher the level of ease in using computers/laptops and mobiles after training, higher is the level of confidence in using digital devices after training. However, the degree of positive correlation varies among the independent variables. This is shown in the following table:

Table – 114: Degree of Association among Variables for West Zone

| Dependent Variable | Independent Variables | r (value) | Degree |
|--------------------|-----------------------|-----------|--------|
| Tr_{sat} | Im_{CEASE} | 0.20532 | Weak |
| | Im_{MEASE} | 0.11395 | Weak |

Central Zone

| | |
|--------------------------|---------------------------|
| 1 With Variables: | Tr_{sat} |
| 2 Variables: | Im_{CEASE} Im_{MEASE} |

Table – 115: Simple Statistics for Central Zone

| Simple Statistics | | | | | | |
|-------------------|-------|---------|---------|---------|---------|---------|
| Variable | N | Mean | Std Dev | Median | Minimum | Maximum |
| Tr_{sat} | 10123 | 1.87642 | 0.67956 | 2.00000 | 1.00000 | 5.00000 |
| Im_{CEASE} | 10123 | 2.49797 | 0.62269 | 3.00000 | 1.00000 | 5.00000 |
| Im_{MEASE} | 10123 | 1.91524 | 0.48320 | 2.00000 | 1.00000 | 5.00000 |

Table – 116: Correlation Coefficient for Central Zone

| Spearman Correlation Coefficients, N = 10123, Prob > r under H0: Rho=0 | | |
|--|----------------|----------------|
| | Im_{CEASE} | Im_{MEASE} |
| Tr_{sat} | 0.43667 <.0001 | 0.37374 <.0001 |

For the central zone, the level of satisfaction with digital devices available during training (Tr_{SAT}) is positively correlated with both the independent variables which means that higher the level of ease in using computers/laptops and mobiles after training, higher is the level of confidence in using digital devices after training. However, the degree of positive correlation varies among the independent variables. This is shown in the following table:

Table – 117: Degree of Association among Variables for Central Zone

| Dependent Variable | Independent Variables | r (value) | Degree |
|--------------------|-----------------------|-----------|----------|
| Tr_{sat} | Im_{CEASE} | 0.43667 | Moderate |
| | Im_{MEASE} | 0.37376 | Moderate |

North-East Zone

| | |
|--------------------------|---------------------------|
| 1 With Variables: | Tr_{sat} |
| 2 Variables: | Im_{CEASE} Im_{MEASE} |

Table – 118: Simple Statistics for North-East Zone

| Simple Statistics | | | | | | |
|-------------------|------|---------|---------|---------|---------|---------|
| Variable | N | Mean | Std Dev | Median | Minimum | Maximum |
| Tr_{sat} | 1528 | 2.16623 | 0.66525 | 2.00000 | 1.00000 | 5.00000 |
| Im_{CEASE} | 1528 | 2.34097 | 0.66897 | 2.00000 | 1.00000 | 5.00000 |
| Im_{MEASE} | 1528 | 1.96924 | 0.69968 | 2.00000 | 1.00000 | 5.00000 |

Table – 119: Correlation Coefficient for North-East Zone

| Spearman Correlation Coefficients, N = 1528, Prob > r under H0: Rho=0 | | |
|---|----------------|----------------|
| | Im_{CEASE} | Im_{MEASE} |
| Tr_{sat} | 0.20684 <.0001 | 0.16117 <.0001 |

For the north-east zone, the level of satisfaction with digital devices available during training (Tr_{SAT}) is positively correlated with both the independent variables which means that higher the level of ease in using computers/laptops and mobiles after training, higher is the level of confidence in using digital devices after training. However, the degree of positive correlation varies among the independent variables. This is shown in the following table:

Table – 120: Degree of Association among Variables for North-East Zone

| Dependent Variable | Independent Variables | r (value) | Degree |
|--------------------|-----------------------|-----------|--------|
| Tr_{sat} | Im_{CEASE} | 0.20681 | Weak |
| | Im_{MEASE} | 0.16117 | Weak |

Thus based on the value of correlation for each of the independent variable, each of the six zones can be ranked in a descending order starting from the highest value. This is shown in the following table:

Table – 121: Rank of the Zones

| Independent Variable | Ranking Order | Rank of the Zones |
|-----------------------------|----------------------|--------------------------|
| <i>Im_{CEASE}</i> | First | South |
| | Second | East, North |
| | Third | Central |
| | Fourth | North East |
| | Fifth | West |
| <i>Im_{MEASE}</i> | First | Central |
| | Second | North |
| | Third | West |
| | Fourth | North East |
| | Fifth | South |
| | Sixth | East |

Case – 3

In this section, correlation test has been performed to find out the nature of impact of various independent variables on the level of confidence in using digital devices. The exercise has been done for all the six zones by using SAS analytical tool.

Dependent variables: Level of confidence in using digital devices after the training (Im_{confi})

Independent variables:

- Ease of accessing social networking sites (Tr_{EA})
- Reporting grievances to the local government using mobile/computer (Tr_{GRV})

North Zone

| | |
|--------------------------|----------------------|
| 1 With Variables: | Im_{confi} |
| 2 Variables: | Tr_{EA} Tr_{GRV} |

Table – 122: Simple Statistics for North Zone

| Simple Statistics | | | | | | |
|-------------------|-------|---------|---------|---------|---------|---------|
| Variable | N | Mean | Std Dev | Median | Minimum | Maximum |
| Im_{confi} | 11452 | 1.58881 | 0.75808 | 2.00000 | 0 | 4.00000 |
| Tr_{EA} | 11452 | 1.35828 | 0.90848 | 1.00000 | 0 | 4.00000 |
| Tr_{GRV} | 11452 | 0.45258 | 1.17298 | 0 | 0 | 4.00000 |

Table – 123: Correlation Coefficient for North Zone

| Spearman Correlation Coefficients, N = 11452, Prob > r under H0: Rho=0 | | |
|--|------------------------|-------------------------|
| | <i>Tr_{EA}</i> | <i>Tr_{GRV}</i> |
| <i>Im_{confi}</i> | 0.63382 <.0001 | 0.13365 <.0001 |

From the above analysis, it can be seen that the level of confidence in using digital devices after the training is positively correlated with both the independent variables, thereby implying that higher the use of social networking sites and higher the level of reporting grievances to the local government using mobile/computer, higher is the level of confidence in using digital devices after the training. However, the degree of positive correlation varies among the independent variables. The degree of positive correlation of the independent variables with the dependent variable is shown in the following table:

Table – 124: Degree of Association among Variables for North Zone

| Dependent Variable | Independent Variables | r (value) | Degree |
|---------------------------|------------------------------|------------------|---------------|
| <i>Im_{confi}</i> | <i>Tr_{EA}</i> | 0.6338 | Moderate |
| | <i>Tr_{GRV}</i> | 0.13365 | Weak |

South Zone

| | |
|--------------------------|----------------------|
| 1 With Variables: | Im_{confi} |
| 2 Variables: | Tr_{EA} Tr_{GRV} |

Table – 125: Simple Statistics for South Zone

| Simple Statistics | | | | | | |
|-------------------|-------|---------|---------|---------|---------|---------|
| Variable | N | Mean | Std Dev | Median | Minimum | Maximum |
| Im_{confi} | 11071 | 1.84627 | 0.57124 | 2.00000 | 0 | 4.00000 |
| Tr_{EA} | 11071 | 1.73498 | 0.77590 | 2.00000 | 0 | 4.00000 |
| Tr_{GRV} | 11071 | 0.63599 | 1.28746 | 0 | 0 | 4.00000 |

Table – 126: Correlation Coefficient for South Zone

| Spearman Correlation Coefficients, N = 11071, Prob > r under H0: Rho=0 | | |
|--|----------------|----------------|
| | Tr_{EA} | Tr_{GRV} |
| Im_{confi} | 0.49662 <.0001 | 0.11869 <.0001 |

From the above analysis, it can be seen that the level of confidence in using digital devices after the training is positively correlated with both the independent variables, thereby implying that higher the use of social networking sites and higher the level of reporting grievances to the local government using mobile/computer, higher is the level of confidence in using digital devices after the training. However, the degree of positive correlation varies among the independent variables. The degree of positive correlation of the independent variables with the dependent variable is shown in the following table:

Table – 127: Degree of Association among Variables for South Zone

| Dependent Variable | Independent Variables | r (value) | Degree |
|--------------------|-----------------------|-----------|----------|
| Im_{confi} | Tr_{EA} | 0.49662 | Moderate |
| | Tr_{GRV} | 0.11869 | Weak |

East Zone

| | |
|--------------------------|----------------------|
| 1 With Variables: | Im_{confi} |
| 2 Variables: | Tr_{EA} Tr_{GRV} |

Table – 128: Simple Statistics for East Zone

| Simple Statistics | | | | | | |
|-------------------|-------|---------|---------|---------|---------|---------|
| Variable | N | Mean | Std Dev | Median | Minimum | Maximum |
| Im_{confi} | 12814 | 1.58506 | 0.58003 | 2.00000 | 0 | 4.00000 |
| Tr_{EA} | 12814 | 1.40144 | 0.78556 | 2.00000 | 0 | 4.00000 |
| Tr_{GRV} | 12814 | 0.41236 | 1.13579 | 0 | 0 | 4.00000 |

Table – 129: Correlation Coefficient for East Zone

| Spearman Correlation Coefficients, N = 12814, Prob > r under H0: Rho=0 | | |
|--|---------------|---------------|
| | Tr_{EA} | Tr_{GRV} |
| Im_{confi} | 0.73894<.0001 | 0.13776<.0001 |

In the east zone, a positive correlation exists between the dependent variable and the independent variables, thus implying that higher the use of social networking sites and higher the level of reporting grievances to the local government using mobile/computer, higher is the level of confidence in using digital devices after the training. However, the degree of positive correlation varies among the independent variables. The degree of positive correlation of the independent variables with the dependent variable is shown in the following table:

Table – 130: Degree of Association among Variables for East Zone

| Dependent Variable | Independent Variables | r (value) | Degree |
|--------------------|-----------------------|-----------|----------|
| Im_{confi} | Tr_{EA} | 0.73894 | Moderate |
| | Tr_{GRV} | 0.13776 | Weak |

West Zone

| | |
|--------------------------|----------------------|
| 1 With Variables: | Im_{confi} |
| 2 Variables: | Tr_{EA} Tr_{GRV} |

Table – 131: Simple Statistics for West Zone

| Simple Statistics | | | | | | |
|-------------------|------|---------|---------|---------|---------|---------|
| Variable | N | Mean | Std Dev | Median | Minimum | Maximum |
| Im_{confi} | 3118 | 1.36466 | 0.54868 | 1.00000 | 0 | 4.00000 |
| Tr_{EA} | 3118 | 1.12893 | 1.07471 | 1.00000 | 0 | 4.00000 |
| Tr_{GRV} | 3118 | 0.50449 | 1.24165 | 0 | 0 | 4.00000 |

Table – 132: Correlation Coefficient for West Zone

| Spearman Correlation Coefficients, N = 3118, Prob > r under H0: Rho=0 | | |
|---|----------------|----------------|
| | Tr_{EA} | Tr_{GRV} |
| Im_{confi} | 0.48145 <.0001 | 0.20689 <.0001 |

In the west zone, a positive correlation exists between the dependent variable and the independent variables, thus implying that higher the use of social networking sites and higher the level of reporting grievances to the local government using mobile/computer, higher is the level of confidence in using digital devices after the training. However, the degree of positive correlation varies among the independent variables. The degree of positive correlation of the independent variables with the dependent variable is shown in the following table:

Table – 133: Degree of Association among Variables for West Zone

| Dependent Variable | Independent Variables | r (value) | Degree |
|--------------------|-----------------------|-----------|----------|
| Im_{confi} | Tr_{EA} | 0.48145 | Moderate |
| | Tr_{GRV} | 0.20689 | Weak |

Central Zone

| | |
|--------------------------|----------------------|
| 1 With Variables: | Im_{confi} |
| 2 Variables: | Tr_{EA} Tr_{GRV} |

Table – 134: Simple Statistics for Central Zone

| Simple Statistics | | | | | | |
|-------------------|-------|---------|---------|---------|---------|---------|
| Variable | N | Mean | Std Dev | Median | Minimum | Maximum |
| Im_{confi} | 10123 | 1.55567 | 0.66894 | 1.00000 | 0 | 4.00000 |
| Tr_{EA} | 10123 | 1.23076 | 0.85855 | 1.00000 | 0 | 4.00000 |
| Tr_{GRV} | 10123 | 0.14630 | 0.69962 | 0 | 0 | 4.00000 |

Table – 135: Correlation Coefficient for Central Zone

| Spearman Correlation Coefficients, N = 10123, Prob > r under H0: Rho=0 | | |
|--|----------------|----------------|
| | Tr_{EA} | Tr_{GRV} |
| Im_{confi} | 0.51606 <.0001 | 0.02364<0.0174 |

In the central zone, a positive correlation exists between the dependent variable and the independent variables, thus implying that higher the use of social networking sites and higher the level of reporting grievances to the local government using mobile/computer, higher is the level of confidence in using digital devices after the training. However, the degree of positive correlation varies among the independent variables. The degree of positive correlation of the independent variables with the dependent variable is shown in the following table:

Table – 136: Degree of Association among Variables for Central Zone

| Dependent Variable | Independent Variables | r (value) | Degree |
|--------------------|-----------------------|-----------|----------|
| Im_{confi} | Tr_{EA} | 0.51606 | Moderate |
| | Tr_{GRV} | 0.02364 | Weak |

North-East Zone

| | |
|--------------------------|----------------------|
| 1 With Variables: | Im_{confi} |
| 2 Variables: | Tr_{EA} Tr_{GRV} |

Table – 137: Simple Statistics for North-East Zone

| Simple Statistics | | | | | | |
|-------------------|------|---------|---------|---------|---------|---------|
| Variable | N | Mean | Std Dev | Median | Minimum | Maximum |
| Im_{confi} | 1528 | 1.71073 | 0.80280 | 2.00000 | 0 | 4.00000 |
| Tr_{EA} | 1528 | 1.40576 | 0.84968 | 1.00000 | 0 | 4.00000 |
| Tr_{GRV} | 1528 | 0.53469 | 1.31142 | 0 | 0 | 4.00000 |

Table – 138: Correlation Coefficient for North-East Zone

| Spearman Correlation Coefficients, N = 1528, Prob > r under H0: Rho=0 | | |
|---|----------------|----------------|
| | Tr_{EA} | Tr_{GRV} |
| Im_{confi} | 0.74336 <.0001 | 0.13677 <.0001 |

In the north-east, a positive correlation exists between the dependent variable and the independent variables, thus implying that higher the use of social networking sites and higher the level of reporting grievances to the local government using mobile/computer, higher is the level of confidence in using digital devices after the training. However, the degree of positive correlation varies among the independent variables. The degree of positive correlation of the independent variables with the dependent variable is shown in the following table:

Table – 139: Degree of Association among Variables for North-East Zone

| Dependent Variable | Independent Variables | r (value) | Degree |
|--------------------|-----------------------|-----------|----------|
| Im_{confi} | Tr_{EA} | 0.74336 | Moderate |
| | Tr_{GRV} | 0.13677 | Weak |

Thus based on the value of correlation for each of the independent variable, each of the six zones can be ranked in a descending order starting from the highest value. This is shown in the following table:

Table – 140: Ranking of the Zones

| Independent Variable | Ranking Order | Rank of the Zones |
|--------------------------------|----------------------|--------------------------|
| <i>Tr_{EA}</i> | First | North-East |
| | Second | East |
| | Third | North |
| | Fourth | Central |
| | Fifth | South |
| | Sixth | West |
| <i>Tr_{GRV}</i> | First | West |
| | Second | North East |
| | Third | North-East |
| | Fourth | South |
| | Fifth | Central |

Regression Analysis

Case – 1

In the study, regression analysis has been performed for each of the six zones, keeping the dependent variable and the set of independent variables same as before.

Dependent variable: Level of confidence in using digital devices after the training (Im_{confi})

Independent variables:

- Level of comfort in connecting Wi-Fi in Smart Phone (M_{Wi-Fi})
- Level of comfort in making video calls (M_{VC})
- Accessing website(s)/ portal(s) to search for Govt. Welfare Schemes/ Crop Prices/Jobs etc. (Im_{access})
- Educating Others (family, friends etc.) about the use of IT (Im_{edu})
- Recommending the training to your family members / friends (Im_{rec})
- Nature of assessment ($Tr_{quality}$)

North Zone

Table – 141: R-Square Value for North Zone

Dependent Variable: Im_{confi}

| | | | |
|-----------------------|----------|-----------------|--------|
| Root MSE | 0.37748 | R-Square | 0.7522 |
| Dependent Mean | 1.58881 | Adj R-Sq | 0.7521 |
| Coeff Var | 23.75855 | | |

Table – 142: Parameter Estimates for North Zone

| Parameter Estimates | | | | | |
|-----------------------------|----|--------------------|----------------|---------|---------|
| Variable | DF | Parameter Estimate | Standard Error | t Value | Pr > t |
| Intercept | 1 | 0.24385 | 0.00971 | 25.11 | <.0001 |
| <i>M_{Wi-Fi}</i> | 1 | 0.03919 | 0.00748 | 5.24 | <.0001 |
| <i>M_{VC}</i> | 1 | 0.09567 | 0.00777 | 12.32 | <.0001 |
| <i>Im_{access}</i> | 1 | 0.47378 | 0.00644 | 73.57 | <.0001 |
| <i>Im_{edu}</i> | 1 | 0.09481 | 0.00578 | 16.41 | <.0001 |
| <i>Im_{rec}</i> | 1 | -0.01277 | 0.00610 | -2.09 | 0.0362 |
| <i>Tr_{quality}</i> | 1 | 0.18681 | 0.00651 | 28.68 | <.0001 |

From the above tables, it can be seen that the R-square value is 0.7522 which indicates a strong dependency of the dependent variable on the independent variables. From the Parameter estimate, it is observed that the level of comfort in using digital devices after training will increase if there is an increase in any of the following independent variables:

- Level of comfort in connecting Wi-Fi in Smart Phone
- Level of comfort in making video calls (Skype, Hangout etc.)
- Accessing website(s)/ portal(s) to search for Govt. Welfare Schemes/ Crop Prices/ Jobs etc.
- Educating Others (family, friends etc.) about the use of IT
- Nature of assessment

However, that the level of confidence in using digital devices after training will increase if there is a decrease in the independent variable “Recommending the training to your family members / friends”

South Zone

Table – 143: R-Square Value for South Zone

Dependent Variable: Im_{confi}

| | | | |
|-----------------------|----------|-----------------|--------|
| Root MSE | 0.29127 | R-Square | 0.7402 |
| Dependent Mean | 1.84627 | Adj R-Sq | 0.7400 |
| Coeff Var | 15.77615 | | |

Table – 144: Parameter Estimates for South Zone

| Parameter Estimates | | | | | |
|----------------------------------|-----------|---------------------------|-----------------------|----------------|--------------------|
| Variable | DF | Parameter Estimate | Standard Error | t Value | Pr > t |
| Intercept | 1 | 0.37157 | 0.01102 | 33.71 | <.0001 |
| M_{Wi-Fi} | 1 | 0.09106 | 0.00533 | 17.09 | <.0001 |
| M_{VC} | 1 | -0.05884 | 0.00645 | -9.12 | <.0001 |
| Im_{access} | 1 | 0.40418 | 0.00629 | 64.22 | <.0001 |
| Im_{edu} | 1 | 0.11256 | 0.00725 | 15.52 | <.0001 |
| Im_{rec} | 1 | 0.07860 | 0.00663 | 11.86 | <.0001 |
| $Tr_{quality}$ | 1 | 0.17166 | 0.00523 | 32.83 | <.0001 |

In the south zone, there exists a strong dependency of the dependent variable on the independent variables. From the Parameter estimate, it is observed that the level of confidence in using digital devices after training will increase if there is an increase in any of the following independent variables:

- Level of comfort in connecting Wi-Fi in Smart Phone
- Accessing website(s)/ portal(s) to search for Govt. Welfare Schemes/ Crop Prices/ Jobs etc.
- Educating Others (family, friends etc.) about the use of IT
- Recommending the training to your family members / friends
- Nature of assessment

However, that the level of confidence in using digital devices after training will increase if there is a decrease in the independent variable “Level of comfort in making video calls (Skype, Hangout etc.)

East Zone

Table – 145: R-Square Value for East Zone

Dependent Variable: Im_{confi}

| | | | |
|-----------------------|----------|-----------------|--------|
| Root MSE | 0.27286 | R-Square | 0.7788 |
| Dependent Mean | 1.58506 | Adj R-Sq | 0.7787 |
| Coeff Var | 17.21474 | | |

Table – 146: Parameter Estimates for East Zone

| Parameter Estimates | | | | | |
|------------------------------------|----|--------------------|----------------|---------|---------|
| Variable | DF | Parameter Estimate | Standard Error | t Value | Pr > t |
| Intercept | 1 | 0.26045 | 0.00786 | 33.15 | <.0001 |
| <i>M_{Wi-Fi}</i> | 1 | 0.09535 | 0.00500 | 19.06 | <.0001 |
| <i>M_{VC}</i> | 1 | 0.02650 | 0.00573 | 4.62 | <.0001 |
| <i>Im_{access}</i> | 1 | 0.37710 | 0.00687 | 54.85 | <.0001 |
| <i>Im_{edu}</i> | 1 | 0.09345 | 0.00405 | 23.06 | <.0001 |
| <i>Im_{rec}</i> | 1 | 0.02966 | 0.00444 | 6.69 | <.0001 |
| <i>Tr_{quality}</i> | 1 | 0.22074 | 0.00637 | 34.64 | <.0001 |

In the east zone, the R-square value is 0.7788 which indicates a strong dependency of dependent variable on the independent variables. It may be noted from the Parameter estimate that the level of confidence in using digital devices after training will increase if there is an increase in any of the following independent variables:

- Level of comfort in connecting Wi-Fi in Smart Phone
- Level of comfort in making video calls (Skype, Hangout etc.)
- Accessing website(s)/ portal(s) to search for Govt. Welfare Schemes/ Crop Prices/ Jobs etc.
- Educating Others (family, friends etc.) about the use of IT
- Recommending the training to your family members / friends
- Nature of assessment

West Zone

Table – 147: R-Square Value for West Zone

Dependent Variable: Im_{confi}

| | | | |
|----------------|----------|----------|--------|
| Root MSE | 0.29968 | R-Square | 0.7023 |
| Dependent Mean | 1.36466 | Adj R-Sq | 0.7017 |
| Coeff Var | 21.96005 | | |

Table – 148: Parameter Estimate for West Zone

| Parameter Estimates | | | | | |
|-----------------------------|----|--------------------|----------------|---------|---------|
| Variable | DF | Parameter Estimate | Standard Error | t Value | Pr > t |
| Intercept | 1 | 0.24160 | 0.01764 | 13.69 | <.0001 |
| <i>M_{Wi-Fi}</i> | 1 | 0.04812 | 0.01009 | 4.77 | <.0001 |
| <i>M_{VC}</i> | 1 | -0.04497 | 0.01012 | -4.45 | <.0001 |
| <i>Im_{access}</i> | 1 | 0.07336 | 0.00681 | 10.77 | <.0001 |
| <i>Im_{edu}</i> | 1 | 0.09211 | 0.00898 | 10.26 | <.0001 |
| <i>Im_{rec}</i> | 1 | 0.34848 | 0.01821 | 19.14 | <.0001 |
| <i>Tr_{quality}</i> | 1 | 0.32409 | 0.01227 | 26.42 | <.0001 |

For the west zone, an increase in the following independent variables lead to an increase in the level of confidence in using digital devices after training:

- Level of comfort in connecting Wi-Fi in Smart Phone
- Accessing website(s)/ portal(s) to search for Govt. Welfare Schemes/ Crop Prices/ Jobs etc.
- Educating Others (family, friends etc.) about the use of IT

- Recommending the training to your family members / friends
- Nature of assessment

However, that the level of confidence in using digital devices after training will increase if there is a decrease in the independent variable “Level of comfort in making video calls (Skype, Hangout etc.)

Central Zone

Table – 149: R-Square Value for Central Zone

Dependent Variable: Im_{confi}

| | | | |
|-----------------------|----------|-----------------|--------|
| Root MSE | 0.50076 | R-Square | 0.7401 |
| Dependent Mean | 1.15610 | Adj R-Sq | 0.7398 |
| Coeff Var | 43.31517 | | |

Table – 150: Parameter Estimates for Central Zone

| Parameter Estimates | | | | | |
|-----------------------------|-----------|---------------------------|-----------------------|----------------|--------------------|
| Variable | DF | Parameter Estimate | Standard Error | t Value | Pr > t |
| Intercept | 1 | -0.54283 | 0.02110 | -25.73 | <.0001 |
| <i>M_{Wi-Fi}</i> | 1 | 0.88598 | 0.00901 | 98.37 | <.0001 |
| <i>M_{VC}</i> | 1 | 0.19340 | 0.01129 | 17.14 | <.0001 |
| <i>Im_{access}</i> | 1 | 0.03620 | 0.01262 | 2.87 | 0.0041 |
| <i>Im_{edu}</i> | 1 | 0.01137 | 0.01291 | 0.88 | 0.3787 |
| <i>Im_{rec}</i> | 1 | 0.02266 | 0.01430 | 1.59 | 0.1130 |
| <i>Tr_{quality}</i> | 1 | 0.05076 | 0.01308 | 3.88 | 0.0001 |

In the central zone an increase in any of the following independent variables lead to an increase in the level of confidence in using digital devices after training:

- Level of comfort in connecting Wi-Fi in Smart Phone
- Level of comfort in making video calls (Skype, Hangout etc.)
- Accessing website(s)/ portal(s) to search for Govt. Welfare Schemes/ Crop Prices/ Jobs etc.
- Educating Others (family, friends etc.) about the use of IT
- Recommending the training to your family members / friends
- Nature of assessment

North-East Zone

Table – 151: R-Square Value for North-East Zone

Dependent Variable: Im_{confi}

| | | | |
|-----------------------|----------|-----------------|--------|
| Root MSE | 0.41408 | R-Square | 0.7350 |
| Dependent Mean | 1.71073 | Adj R-Sq | 0.7340 |
| Coeff Var | 24.20473 | | |

Table – 152: Parameter Estimates for North-East Zone

| Parameter Estimates | | | | | |
|-----------------------------|----|--------------------|----------------|---------|---------|
| Variable | DF | Parameter Estimate | Standard Error | t Value | Pr > t |
| Intercept | 1 | 0.38432 | 0.02938 | 13.08 | <.0001 |
| <i>M_{Wi-Fi}</i> | 1 | 0.14914 | 0.02277 | 6.55 | <.0001 |
| <i>M_{VC}</i> | 1 | 0.11634 | 0.02285 | 5.09 | <.0001 |
| <i>Im_{access}</i> | 1 | 0.36373 | 0.02060 | 17.65 | <.0001 |
| <i>Im_{edu}</i> | 1 | 0.01741 | 0.02081 | 0.84 | 0.4030 |
| <i>Im_{rec}</i> | 1 | 0.06144 | 0.02185 | 2.81 | 0.0050 |
| <i>Tr_{quality}</i> | 1 | 0.16770 | 0.01713 | 9.79 | <.0001 |

For the north-east, the level of confidence in using digital devices after training will increase among the beneficiaries with an increase in any of the following independent variables:

- Level of comfort in connecting Wi-Fi in Smart Phone
- Level of comfort in making video calls (Skype, Hangout etc.)
- Accessing website(s)/ portal(s) to search for Govt. Welfare Schemes/ Crop Prices/ Jobs etc.
- Educating Others (family, friends etc.) about the use of IT
- Recommending the training to your family members / friends
- Nature of assessment

Thus type of impact of each of the independent variable on the dependent variable for all the six zones taken together can be represented in a single table as shown below:

Table – 153: Scale of Impact

| Independent Variable | Scale of impact | | | | | |
|----------------------|-----------------|----------|--------|----------|---------|------------|
| | North | South | East | West | Central | North-East |
| M_{Wi-Fi} | Direct | Direct | Direct | Direct | Direct | Direct |
| M_{VC} | Direct | Indirect | Direct | Indirect | Direct | Direct |
| Im_{access} | Direct | Direct | Direct | Direct | Direct | Direct |
| Im_{edu} | Direct | Direct | Direct | Direct | Direct | Direct |
| Im_{rec} | Indirect | Direct | Direct | Direct | Direct | Direct |
| $Tr_{quality}$ | Direct | Direct | Direct | Direct | Direct | Direct |

Case – 2

Dependent variable: Level of satisfaction with computer /laptops/mobiles available during training (Tr_{sat}).

Independent variables:

- Level of ease in using computer after training (Im_{CEASE})
- Level of ease in using mobile after the training (Im_{MEASE})

North Zone

Table – 154: R-Square Value for North Zone

Dependent variable Tr_{sat}

| | | | |
|-----------------------|----------|-----------------|--------|
| Root MSE | 0.62400 | R-Square | 0.1723 |
| Dependent Mean | 2.25297 | Adj R-Sq | 0.1722 |
| Coeff Var | 27.69658 | | |

Table – 155: Parameter Estimates for North Zone

| Parameter Estimates | | | | | |
|--------------------------------|-----------|---------------------------|-----------------------|----------------|--------------------|
| Variable | DF | Parameter Estimate | Standard Error | t Value | Pr > t |
| Intercept | 1 | 1.09612 | 0.02453 | 44.68 | <.0001 |
| Im_{CEASE} | 1 | 0.35533 | 0.00977 | 36.38 | <.0001 |
| Im_{MEASE} | 1 | 0.14056 | 0.00672 | 20.93 | <.0001 |

From the above tables, it can be seen that the R-square value is 0.1733 which indicates a weak dependency of the dependent variable on the independent variables. Parameter estimate indicates that a direct relation between the variables, thus implying that a unit increase in any of the independent variable will result in an unit increase on the dependent variable.

South Zone

Table – 156: R-Square Value for South Zone

Dependent variable Tr_{sat}

| | | | |
|-----------------------|----------|-----------------|--------|
| Root MSE | 0.51186 | R-Square | 0.3145 |
| Dependent Mean | 2.16485 | Adj R-Sq | 0.3144 |
| Coeff Var | 23.64401 | | |

Table – 157: Parameter Estimates for South Zone

| Parameter Estimates | | | | | |
|--------------------------------|----|--------------------|----------------|---------|---------|
| Variable | DF | Parameter Estimate | Standard Error | t Value | Pr > t |
| Intercept | 1 | 1.14102 | 0.02794 | 40.83 | <.0001 |
| Im_{CEASE} | 1 | 0.66281 | 0.00931 | 71.22 | <.0001 |
| Im_{MEASE} | 1 | -0.24090 | 0.01268 | -19.00 | <.0001 |

From the above table, in south zone, it can be seen that the R-square value is 0.3145 which indicates moderate dependency of the dependent variable on the independent variables. Parameter estimate indicates that a direct relation exists between Tr_{sat} and Im_{CEASE} , thus implying that a unit increase in the independent variable will result in a unit increase on the dependent variable. However, there exists an inverse relation between Tr_{sat} and Im_{MEASE} thereby implying that an increase in Tr_{sat} will result in a decrease in Im_{MEASE} .

East Zone

Table – 158: R-Square Value for East Zone

Dependent variable: Tr_{sat}

| | | | |
|-----------------------|----------|-----------------|--------|
| Root MSE | 0.58477 | R-Square | 0.1621 |
| Dependent Mean | 2.21118 | Adj R-Sq | 0.1620 |
| Coeff Var | 26.44610 | | |

Table – 159: Parameter Estimates for East Zone

| Parameter Estimates | | | | | |
|--------------------------------|-----------|---------------------------|-----------------------|----------------|--------------------|
| Variable | DF | Parameter Estimate | Standard Error | t Value | Pr > t |
| Intercept | 1 | 1.45697 | 0.02957 | 49.27 | <.0001 |
| Im_{CEASE} | 1 | 0.38043 | 0.00894 | 42.57 | <.0001 |
| Im_{MEASE} | 1 | -0.09394 | 0.00876 | -10.73 | <.0001 |

For the east zone, zone it can be seen that the R-square value is 0.1621 which indicates weak dependency of the dependent variable on the independent variables. The independent variable, Im_{CEASE} , is directly related with the dependent variable whereas the other independent variable, Im_{MEASE} , is inversely related with the dependent variable.

West Zone

Table – 160: R-Square Value for West Zone

Dependent variable Tr_{sat}

| | | | |
|----------------|----------|----------|--------|
| Root MSE | 0.57964 | R-Square | 0.0460 |
| Dependent Mean | 2.13278 | Adj R-Sq | 0.0454 |
| Coeff Var | 27.17773 | | |

Table – 161: Parameter Estimates for West Zone

| Parameter Estimates | | | | | |
|---------------------|----|--------------------|----------------|---------|---------|
| Variable | DF | Parameter Estimate | Standard Error | t Value | Pr > t |
| Intercept | 1 | 1.35989 | 0.06399 | 21.25 | <.0001 |
| Im_{CEASE} | 1 | 0.12656 | 0.01692 | 7.48 | <.0001 |
| Im_{MEASE} | 1 | 0.25296 | 0.02734 | 9.25 | <.0001 |

In the west zone, from the above table it is seen R-square value is 0.0460 which indicates a very weak dependency of dependent variable on independent variables. The dependent variable, Tr_{sat} , is directly related with both the independent variables.

Central Zone

Table – 162: R-Square Value for Central Zone

Dependent variable Tr_{sat}

| | | | |
|----------------|----------|----------|--------|
| Root MSE | 0.61382 | R-Square | 0.1843 |
| Dependent Mean | 1.87642 | Adj R-Sq | 0.1841 |
| Coeff Var | 32.71205 | | |

Table – 163: Parameter Estimates for Central Zone

| Parameter Estimates | | | | | |
|---------------------|----|--------------------|----------------|---------|---------|
| Variable | DF | Parameter Estimate | Standard Error | t Value | Pr > t |
| Intercept | 1 | 0.53550 | 0.02921 | 18.34 | <.0001 |
| Im_{CEASE} | 1 | 0.35867 | 0.01098 | 32.67 | <.0001 |
| Im_{MEASE} | 1 | 0.23233 | 0.01415 | 16.42 | <.0001 |

In the central zone, from the above table, it is seen R-square value is 0.1841 which indicates a weak dependency of dependent variable on independent variables. The dependent variable, Tr_{sat} is directly related with both the independent variables.

North-East Zone

Table – 164: R-Square Value for North-East Zone

Dependent variable Tr_{sat}

| | | | |
|-----------------------|----------|-----------------|--------|
| Root MSE | 0.65699 | R-Square | 0.0259 |
| Dependent Mean | 2.16623 | Adj R-Sq | 0.0247 |
| Coeff Var | 30.32883 | | |

Table – 165: Parameter Estimates for North-East Zone

| Parameter Estimates | | | | | |
|--------------------------------|----|--------------------|----------------|---------|---------|
| Variable | DF | Parameter Estimate | Standard Error | t Value | Pr > t |
| Intercept | 1 | 1.73433 | 0.06983 | 24.84 | <.0001 |
| Im_{CEASE} | 1 | 0.11716 | 0.02596 | 4.51 | <.0001 |
| Im_{MEASE} | 1 | 0.08004 | 0.02482 | 3.22 | 0.0013 |

The above table for the north-east zone indicates that the R-square value is 0.0259 which implies a weak dependency of dependent variable on independent variables. Parameter estimate indicates that an unit increase in any of the independent variables will result in an increase in the dependent variable.

Thus, type of impact of each of the independent variable on the dependent variable for all the six zones taken together can be represented in a single table as shown below:

Table – 166: Scale of Impact

| Independent Variable | Scale of impact | | | | | |
|--------------------------------|-----------------|----------|----------|--------|---------|------------|
| | North | South | East | West | Central | North-East |
| Im_{CEASE} | Direct | Direct | Direct | Direct | Direct | Direct |
| Im_{MEASE} | Direct | Indirect | Indirect | Direct | Direct | Direct |

ANOVA (single factor) Test – Level of confidence in using digital devices after training on various age groups

In this section, ANOVA test has been performed for all the six zones to understand the level of confidence in using digital devices after the training on various age groups of the respondents. Two hypotheses has been developed to test their acceptance or rejection:

Null Hypothesis: there exist no difference in level of confidence in using digital devices after the training between the age groups.

Alternative Hypothesis: there exists significant difference in level of confidence in using digital devices after the training between the age groups.

Below mentioned are the values of the level of confidence in using digital devices after the training:

- Highly confident = 1
- Confident = 2
- Not so confident = 3
- Non-confident = 4
- Highly Non-confident = 0

North Zone**Anova: Single Factor****Table – 167: Summary for North Zone**

| SUMMARY | | | | |
|-------------------|--------------|----------------|-----------------|-----------|
| <i>Age Groups</i> | <i>Count</i> | <i>Average</i> | <i>Variance</i> | <i>Sd</i> |
| 14-18 | 5027 | 1.604138 | 0.442148 | 0.664942 |
| 19-30 | 5308 | 1.555388 | 0.686021 | 0.828264 |
| 31-50 | 998 | 1.681363 | 0.672691 | 0.820178 |
| 50-60 | 119 | 1.655462 | 0.261644 | 0.511511 |

Table – 168: P-Value for North Zone

| ANOVA | | | | | | |
|----------------------------|-----------|-----------|-----------|----------|----------------|---------------|
| <i>Source of Variation</i> | <i>SS</i> | <i>df</i> | <i>MS</i> | <i>F</i> | <i>P-value</i> | <i>F crit</i> |
| Between Groups | 16.18772 | 3 | 5.395908 | 9.410067 | 3.3E-06 | 2.605685 |
| Within Groups | 6564.497 | 11448 | 0.573419 | | | |
| Total | 6580.685 | 11451 | | | | |

P-value=0.000003

The above analysis depicts that the level of confidence in using digital devices after training lies between “Highly confident” and “Confident” for the respondents from all the age groups. A lower value indicates the higher level of confidence. Thus the age group 19-30 has the highest level of confidence in using digital devices after training followed by the age groups 14-18, 50-60 and 31-50 respectively. However, the variation in the responses is higher (0.8282) within the age group of 19 – 30 whereas it is low (0.5115) within the age group of 50 – 60. In above ANOVA table p-value is less than alpha value (95% level of confidence) is 1.5 (i.e p-value 0.000003), which means that the null hypothesis will be rejected. Thus there exists a difference in level of confidence in using digital devices after the training between the age groups.

South Zone

Anova: Single factor

Table – 169: Summary for South Zone

| SUMMARY | | | | |
|-------------------|--------------|----------------|-----------------|-----------|
| <i>Age Groups</i> | <i>Count</i> | <i>Average</i> | <i>Variance</i> | <i>Sd</i> |
| 14-18 | 6071 | 1.839071 | 0.321544 | 0.567049 |
| 19-30 | 4040 | 1.837376 | 0.278821 | 0.528035 |
| 31-50 | 949 | 1.935722 | 0.547552 | 0.739967 |
| 50-60 | 11 | 1.363636 | 0.454545 | 0.6742 |

Table – 170: P-Value for South Zone

| ANOVA | | | | | | |
|----------------------------|-----------|-----------|-----------|----------|----------------|---------------|
| <i>Source of Variation</i> | <i>SS</i> | <i>df</i> | <i>MS</i> | <i>F</i> | <i>P-value</i> | <i>F crit</i> |
| Between Groups | 10.790025 | 3 | 3.596675 | 11.05201 | 3.06E-07 | 2.605711 |
| Within Groups | 3601.553 | 11067 | 0.325432 | | | |
| Total | 3612.3431 | 11070 | | | | |

P-value=0.0000003

The above tables indicate that the average level of confidence in using digital devices after training for all the age groups lie between “Highly confident” and “Confident” with the age group 50 – 60 where it is almost highly confident followed by the age groups 19 – 30, 14 – 18 and 31 – 50 respectively. The variation in response within the age group is high (0.7399) for 31 – 50 and low (0.5280) for 19 – 30. In above ANOVA table p-value is less than alpha value (95% level of confidence) is 0.05 (i.e p-value 0.00000036), which means that the null hypothesis will be rejected. Thus there exists a difference in level of confidence in using digital devices after the training between the age groups.

East Zone

Anova: Single Factor

Table – 171: Summary for East Zone

| SUMMARY | | | | |
|-------------------|--------------|----------------|-----------------|-----------|
| <i>Age Groups</i> | <i>Count</i> | <i>Average</i> | <i>Variance</i> | <i>Sd</i> |
| 14-18 | 5813 | 1.699983 | 0.268543 | 0.518211 |
| 19-30 | 5920 | 1.528209 | 0.358386 | 0.598654 |
| 31-50 | 998 | 1.306613 | 0.3412 | 0.584123 |
| 50-60 | 83 | 0.939759 | 0.984132 | 0.992034 |

Table – 172: P-Value for East Zone

| ANOVA | | | | | | |
|----------------------------|-----------|-----------|-----------|----------|----------------|---------------|
| <i>Source of Variation</i> | <i>SS</i> | <i>df</i> | <i>MS</i> | <i>F</i> | <i>P-value</i> | <i>F crit</i> |
| Between Groups | 207.8469 | 3 | 69.28231 | 216.3102 | 6.9E-137 | 2.605602 |
| Within Groups | 4102.934 | 12810 | 0.320292 | | | |
| Total | 4310.781 | 12813 | | | | |

P-value 6.9E-137

In the east zone, the average level of confidence in using digital devices after training tends to almost “Highly Confident” for the age group 50 – 60 while it lies between “Highly confident” and “Confident” in a descending order for the age groups 31 – 50, 19 – 30 and 14 – 18 respectively. The variation in response within the same age group is lowest (0.5182) for 14 – 18 and highest (0.9920) for 50 – 60. In above ANOVA table p-value is less than alpha value (95% level of confidence) is 0.05, which means that the null hypothesis will be rejected. Thus there exists a difference in level of confidence in using digital devices after the training between the age groups. However, the p value is so small it can be said that the existing difference in level of confidence in using digital devices after the training for various age groups is negligible.

West Zone

Anova: Single Factor

Table – 173: Summary for West Zone

| SUMMARY | | | | |
|-------------------|--------------|----------------|-----------------|-----------|
| <i>Age Groups</i> | <i>Count</i> | <i>Average</i> | <i>Variance</i> | <i>Sd</i> |
| 14-18 | 616 | 1.707792 | 0.236427 | 0.486238 |
| 19-30 | 1946 | 1.264645 | 0.25949 | 0.509401 |
| 31-50 | 550 | 1.325455 | 0.340152 | 0.583226 |
| 50-60 | 6 | 2.166667 | 0.966667 | 0.983192 |

Table – 174: P-Value for West Zone

| ANOVA | | | | | | |
|----------------------------|-----------|-----------|-----------|----------|----------------|---------------|
| <i>Source of Variation</i> | <i>SS</i> | <i>df</i> | <i>MS</i> | <i>F</i> | <i>P-value</i> | <i>F crit</i> |
| Between Groups | 96.69801 | 3 | 32.23267 | 119.2516 | 4.16E-73 | 2.607762 |
| Within Groups | 841.6872 | 3114 | 0.270291 | | | |
| Total | 938.3852 | 3117 | | | | |

P-value=4.16E-73

In the west zone, the average level of confidence in using digital devices after training is between “Highly confident” and “Confident” in a descending order for the age groups 19 – 30, 31 – 50 and 14 – 18 respectively. However, for the age group 50 – 60 where the average value lies between “Confident” and “Not so confident”. However, the variation in response within the same age group is high (0.9831) for 50 – 60 and low (0.4862) for 14 – 18. In above ANOVA table p-value is less than alpha value (95% level of confidence) is 0.05, which means that the null hypothesis will be rejected. Thus there exists a difference in level of confidence in using digital devices after the training between the age groups. However, the p value is so small it can be said that the existing difference in level of confidence in using digital devices after the training for various age groups is negligible.

Central Zone

Anova : Single Factor

Table – 175: Summary for Central Zone

| SUMMARY | | | | |
|-------------------|--------------|----------------|-----------------|-----------|
| <i>Age Groups</i> | <i>Count</i> | <i>Average</i> | <i>Variance</i> | <i>Sd</i> |
| 14-18 | 6133 | 1.587804 | 0.478142 | 0.691478 |
| 19-30 | 3434 | 1.498835 | 0.356684 | 0.59723 |
| 31-50 | 543 | 1.550645 | 0.639036 | 0.799397 |
| 50-60 | 13 | 1.615385 | 0.75641 | 0.869718 |

Table – 176: P-Value for Central Zone

| ANOVA | | | | | | |
|----------------------------|-----------|-----------|-----------|----------|----------------|---------------|
| <i>Source of Variation</i> | <i>SS</i> | <i>df</i> | <i>MS</i> | <i>F</i> | <i>P-value</i> | <i>F crit</i> |
| Between Groups | 17.48534 | 3 | 5.828447 | 13.07167 | 1.62E-08 | 2.605787 |
| Within Groups | 4511.897 | 10119 | 0.445884 | | | |
| Total | 4529.383 | 10122 | | | | |

P-VALUE=1.62E-08

In the central zone, the average level of confidence in using digital devices after training is between “Highly confident” and “Confident” for all the age groups with 19 – 30 showing the highest level of confidence followed by 31 – 50, 14 – 18 and 50 – 60 respectively. The age group 50 – 60 has the highest variation (0.869718) in response and the age group 19 – 30 having the lowest variation (0.5972) in response. In the above ANOVA table p-value is less than alpha value (95% level of confidence) is 0.05 which means that the null hypothesis will be rejected. Thus there exists a difference in level of confidence in using digital devices after the training between the age groups.

North-East

Anova: Single Factor

Table – 177: Summary for North-East Zone

| 31-50 | 93 | 1.333333 | 0.789855 | 0.888738 |
| 50-60 | 5 | 1.2 | 0.2 | 0.447214 |

Table – 178: P-Value for North-East Zone

| ANOVA | | | | | | |
|----------------------------|-----------|-----------|-----------|----------|----------------|---------------|
| <i>Source of Variation</i> | <i>SS</i> | <i>df</i> | <i>MS</i> | <i>F</i> | <i>P-value</i> | <i>F crit</i> |
| Between Groups | 19.18424 | 3 | 6.394747 | 10.09948 | 1.37E-06 | 2.610741 |
| Within Groups | 964.9597 | 1524 | 0.633176 | | | |
| Total | 984.144 | 1527 | | | | |

P-value=0.0000013

In the north-east, the average level of confidence in using digital devices after training is between “Highly confident” and “Confident” for all the age groups with the age group 50 – 60 showing the highest level of confidence followed by 31 – 50, 19 – 30 and 14 – 18 respectively. The age group 31 – 50 is having the highest variation (0.88873) in response and the age group 50 – 60 is having the lowest variation (0.4472) in response. In the above ANOVA table p-value is less than alpha value (95% level of confidence) is 0.05 which means that the null hypothesis will be rejected. Thus there exists a difference in level of confidence in using digital devices after the training between the age groups.

Thus the above analysis for all the six zones can be shown in a single table as below:

Table – 179: Range of Response Level: Level of confidence in using digital devices after training of various age groups

| Age Group | Range of Response | | | | |
|---------------------|-------------------|-----------|------------------|---------------|---------------------|
| | Highly Confident | Confident | Not so confident | Non-confident | Highly Nonconfident |
| North Zone | | | | | |
| 14 – 18 | | | | | |
| 19 – 30 | | | | | |
| 31 – 50 | | | | | |
| 51 – 60 | | | | | |
| South Zone | | | | | |
| 14 – 18 | | | | | |
| 19 – 30 | | | | | |
| 31 – 50 | | | | | |
| 51 – 60 | | | | | |
| East Zone | | | | | |
| 14 – 18 | | | | | |
| 19 – 30 | | | | | |
| 31 – 50 | | | | | |
| 51 – 60 | | | | | |
| West Zone | | | | | |
| 14 – 18 | | | | | |
| 19 – 30 | | | | | |
| 31 – 50 | | | | | |
| 51 – 60 | | | | | |
| Central Zone | | | | | |
| 14 – 18 | | | | | |

| Age Group | Range of Response | | | | |
|-------------------|-------------------|-----------|------------------|---------------|---------------------|
| | Highly Confident | Confident | Not so confident | Non-confident | Highly Nonconfident |
| 19 – 30 | | | | | |
| 31 – 50 | | | | | |
| 51 – 60 | | | | | |
| North-East | | | | | |
| 14 – 18 | | | | | |
| 19 – 30 | | | | | |
| 31 – 50 | | | | | |
| 51 – 60 | | | | | |

The shaded region in the above table represents the area where the average level of confidence in using digital devices after training lies.

ANOVA (single factor) Test – Purpose of using technology by the respondents from various professions

Following hypotheses have been developed:

Null Hypothesis: there exists no difference in mean purpose of using technology among the respondents with various professions

Alternative Hypothesis: there exists significant difference in mean purpose of using technology among the respondents with various professions

Below mentioned are the values for the purpose of using technology T_{ePUR} :

- Agriculture market price information = 1
- Utility bill payment (Ticket booking / online recharge) online banking = 2
- Getting information about education and employment opportunities = 3
- Weather information = 4
- Accessing Govt websites/ filling online application (pan card /passport) = 5
- Other = 6

Table – 180: Mean Value for Purpose of Using Technology

| Purpose of using technology (mean value) | | | | | | | | | | | | |
|--|---------|--------|---------|-------------------------|---------------------------|---------|---------------------|---------------|--------|-------------|--------------------------|----------------|
| Profession → | Student | Farmer | Traders | Service Sector Employee | Asha/ Anganwadi Worker | Teacher | Government Servants | Self-Employed | Others | House Wives | Private Sector Employees | Wage Labourers |
| Zones ↓ | | | | | | | | | | | | |
| North | 9.76 | 4.01 | 8.91 | 7.32 | 12.41 | 14.44 | 14.83 | 11.21 | 4.6 | 9.06 | 11.09 | 5.72 |
| South | 7.84 | 4.15 | 7.23 | 9.51 | 5.63 | 8.49 | 18.7 | 8.45 | 9.96 | 6.91 | 14.49 | 10.55 |
| East | 21.45 | 12.15 | 17.71 | 20.52 | 21.07 | 28.71 | 22.15 | 29.78 | 17.18 | 18.44 | 16.22 | 4.88 |
| West | 20.04 | 15.95 | 26.96 | 19.88 | 16.95 | 36.5 | 7 | 17.9 | 12.45 | 14.55 | 28.73 | 12.71 |
| Central | 8.92 | 8.87 | 10.78 | 12.21 | 9.2 | 25.58 | 30.24 | 16.82 | 12.18 | 7.98 | 20.64 | 8.31 |
| North East | 15.56 | 5.51 | 24.11 | 20.87 | 17.76 | 29.06 | 28.3 | 20.4 | 21.82 | 16.2 | 22.72 | 6 |

The above table depicts the mean purpose of using technology for the students and housewives across all the six zones vary between 7 and 22 (minimum value – 7.84, maximum value – 21.45) which means that they have used technology after the training mainly for a combination of two purposes. For the farmers, ASHA/Anganwadi workers and wage labourers, the mean purpose of using technology ranges between 4 and 16

(minimum value – 4.01, maximum value – 15.95) and 5 and 22 (minimum value – 5.63, maximum value – 21.07) respectively indicating the use of technology either for a single purpose or for a combination of two purposes. Traders, Govt. servants, private sector employees and self- employed respondents have used the technology either for a combination of two or three purposes. Service sector employees have used technology for a combination of two purposes. This can be represented in the following table:

Table – 181: Purpose of Using Technology for different Professions

| Sl. No | Profession | Purpose of using technology (Mean value) | | Purpose |
|--------|--------------------------|--|-------|---------------|
| | | Max | Min | |
| 1. | Student | 21.45 | 7.84 | Double |
| 2. | Service Sector Employees | 20.87 | 7.32 | |
| 3. | Farmers | 15.95 | 4.01 | Single/Double |
| 4. | ASHA/Anganwadi Workers | 21.07 | 5.63 | |
| 5. | Others | 21.82 | 4.60 | |
| 6. | Housewife's | 18.44 | 6.91 | |
| 7. | Wage laborer's | 12.71 | 4.88 | |
| 8. | Traders | 26.96 | 7.23 | Double/Triple |
| 9. | Teacher | 36.50 | 8.49 | |
| 10. | Govt. servant | 30.24 | 7.00 | |
| 11. | Self-employed | 29.78 | 8.45 | |
| 12. | Private sector employees | 28.73 | 11.09 | |

Anova: Single Factor

Table – 182: Summary

| SUMMARY | | | | |
|---------------------------|--------------|------------|----------------|-----------------|
| <i>Professions Groups</i> | <i>Zones</i> | <i>Sum</i> | <i>Average</i> | <i>Variance</i> |
| 1 | 6 | 83.57 | 13.92833 | 35.2233 |
| 2 | 6 | 50.64 | 8.44 | 23.3926 |
| 3 | 6 | 95.7 | 15.95 | 68.64644 |
| 4 | 6 | 90.31 | 15.05167 | 37.12646 |
| 5 | 6 | 83.02 | 13.83667 | 33.65799 |
| 6 | 6 | 142.78 | 23.79667 | 107.6479 |
| 7 | 6 | 121.22 | 20.20333 | 75.10819 |
| 8 | 6 | 104.56 | 17.42667 | 56.25303 |
| 9 | 6 | 78.19 | 13.03167 | 35.20706 |
| 10 | 6 | 73.14 | 12.19 | 23.22232 |
| 11 | 6 | 113.89 | 18.98167 | 40.3671 |
| 12 | 6 | 48.17 | 8.028333 | 9.542137 |

Table – 183: P-Value

| ANOVA | | | | | | |
|----------------------------|-----------|-----------|-----------|----------|----------------|---------------|
| <i>Source of Variation</i> | <i>SS</i> | <i>df</i> | <i>MS</i> | <i>F</i> | <i>P-value</i> | <i>F crit</i> |
| Between Groups | 1397.707 | 11 | 127.0643 | 2.795722 | 0.005289 | 1.952212 |
| Within Groups | 2726.973 | 60 | 45.44955 | | | |

In the above ANOVA table p-value is less than alpha value (95% level of confidence) is 0.05 and f value is greater than f critical value which means that the null hypothesis will be rejected and alternative hypothesis will be accepted thereby implying that there exists significant difference in mean purpose of using technology among the respondents with various professions.

ANOVA (single factor) Test – Purpose of using technology by the respondents from various age groups

Following hypotheses have been developed:

Null Hypothesis: there exists no significant difference in mean purpose of using technology among the respondents with various age groups

Alternative Hypothesis: there exists significant difference in mean purpose of using technology among the respondents with various age groups.

Below mentioned are the age groups as specified in the questionnaire:

- 14-18
- 19-30
- 31-50
- 50-60

Table – 184: Zone-wise Mean Value for Purpose of Using Technology

| Purpose of using technology (Mean value) | | | | |
|--|-------|-------|-------|-------|
| Age Group → | 14-18 | 19-30 | 31-50 | 50-60 |
| Zone ↓ | | | | |
| North | 9.14 | 9.99 | 8.46 | 13.47 |
| South | 5.79 | 11.44 | 5.07 | 5.09 |
| East | 15.01 | 28.58 | 17.92 | 12.85 |
| West | 13.48 | 21.99 | 16.5 | 7.5 |
| Central | 7.32 | 13.72 | 12.27 | 10.46 |
| North-East | 15.5 | 17.04 | 22.73 | 13.6 |

The above table shows that the respondents from the age group of 14-18 have used the technology either for a combination of two or three purposes. Respondents from the age group of 19-30 have used the technology for a combination of either two or three purposes. Respondents from the age group of 31-50 have used the technology either for a single purpose or for a combination of either two or three purposes. Respondents from the age group of 50-60 have used the technology either for a single purpose or for a combination of two purposes. This has been represented in the following table:

Table – 185: Purpose of Using Technology for different Age Groups

| Sl. No | Age Group | Purpose of using technology (Mean value) | | Purpose |
|--------|-----------|--|------|----------------------|
| | | Max | Min | |
| 1. | 14-18 | 15.50 | 5.79 | Single/Double |
| 2. | 50-60 | 13.60 | 5.09 | Single/Double |
| 3. | 19-30 | 28.58 | 9.99 | Double/Triple |
| 4. | 31-50 | 22.73 | 5.07 | Single/Double/Triple |

Anova: Single Factor

Table – 186: Summary

| SUMMARY | | | | |
|-------------------|--------------|------------|----------------|-----------------|
| <i>Age Groups</i> | <i>Zones</i> | <i>Sum</i> | <i>Average</i> | <i>Variance</i> |
| 14-18 | 6 | 66.24 | 11.04 | 17.3234 |
| 19-30 | 6 | 102.76 | 17.12667 | 49.94279 |
| 31-50 | 6 | 82.95 | 13.825 | 42.21499 |
| 50-60 | 6 | 62.97 | 10.495 | 12.44459 |

Table – 187: P-Value

| ANOVA | | | | | | |
|----------------------------|-----------|-----------|-----------|----------|----------------|---------------|
| <i>Source of Variation</i> | <i>SS</i> | <i>df</i> | <i>MS</i> | <i>F</i> | <i>P-value</i> | <i>F crit</i> |
| Between Groups | 166.6045 | 3 | 55.53483 | 1.821923 | 0.175646 | 3.098391 |
| Within Groups | 609.6288 | 20 | 30.48144 | | | |
| Total | 776.2333 | 23 | | | | |

From the above ANOVA table, it can be seen that the p-value is greater than alpha value (95% level of confidence) is 0.05 and f value is less than f critical value thereby implying that the null hypothesis will be accepted, i.e., there exists no significant difference in mean purpose of using technology among the respondents of various age groups.

ANOVA (single factor) Test – Level of confidence in using digital devices after training for the respondents of various professions

Following hypotheses have been developed:

Null Hypothesis: there exists no significant difference in mean level of confidence in using digital devices after the training between the respondents of various professions

Alternative Hypothesis: there exists significant difference in mean level of confidence in using digital devices after the training between the respondents of various professions.

Impact Assessment Study of DISHA

Below mentioned are the values of the level of confidence in using digital devices after the training:

- Highly confident = 1
- Confident = 2
- Not so confident = 3
- Unconfident = 4
- Highly unconfident = 0

The values assigned to each of the profession as mentioned in the questionnaire is given below:

- Student = 1
- Farmer = 2
- Trader = 3
- Service sector Employee = 4
- Asha /Anganwadi workers = 5
- Teachers = 6
- Government servants = 7
- Self-employment (VLES and small-scale entrepreneurs) = 8
- Others = 9
- Housewife = 10
- Private sector Employees = 11
- Wage Laborer's = 12

Anova : Single Factor

Table – 188: Summary

| SUMMARY | | | | | |
|-------------------|--------------|------------|----------------|-----------------|-----------|
| <i>Profession</i> | <i>Zones</i> | <i>Sum</i> | <i>Average</i> | <i>Variance</i> | <i>Sd</i> |
| 1 | 6 | 9.59 | 1.598333 | 0.030097 | 0.173484 |
| 2 | 6 | 9.51 | 1.585 | 0.02827 | 0.168137 |
| 3 | 6 | 7.9 | 1.316667 | 0.090427 | 0.30071 |
| 4 | 6 | 7.81 | 1.301667 | 0.148177 | 0.384937 |
| 5 | 6 | 8.34 | 1.39 | 0.03196 | 0.178774 |
| 6 | 6 | 8.61 | 1.435 | 0.08407 | 0.289948 |
| 7 | 6 | 8.84 | 1.473333 | 0.118107 | 0.343667 |
| 8 | 6 | 8.79 | 1.465 | 0.05275 | 0.229674 |
| 9 | 6 | 8.28 | 1.38 | 0.0612 | 0.247386 |
| 10 | 6 | 10.55 | 1.758333 | 0.054897 | 0.2343 |
| 11 | 6 | 10.87 | 1.811667 | 0.059417 | 0.243755 |
| 12 | 6 | 14.79 | 2.465 | 0.28975 | 0.538284 |

Table – 189: P-Value

| ANOVA | | | | | | |
|----------------------------|-----------|-----------|-----------|----------|----------------|---------------|
| <i>Source of Variation</i> | <i>SS</i> | <i>df</i> | <i>MS</i> | <i>F</i> | <i>P-value</i> | <i>F crit</i> |
| Between Groups | 6.8254 | 11 | 0.620491 | 7.097273 | 1.5E-07 | 1.952212 |
| Within Groups | 5.2456 | 60 | 0.087427 | | | |
| Total | 12.071 | 71 | | | | |

In the above ANOVA table p-value is less than alpha value (95% level of confidence) is 0.05 and f value is greater than f critical value which means that the null hypothesis will be rejected and alternative hypothesis will be accepted thereby indicating that there exists a significant difference in mean level of confidence in using digital devices after the training between the respondents of various professions.

The variation in mean level of confidence in using digital devices after the training among the the respondents from all professions across all the six zones is shown in the following table with the shaded region as indicated:

Table – 190: Range of Response Level: Purpose of using technology by various age groups

| Professions | Range of Response Level | | | | |
|---------------------------------------|-------------------------|-----------|------------------|-------------|--------------------|
| | Highly Confident | Confident | Not so confident | Unconfident | Highly Unconfident |
| Over all Zone | | | | | |
| Student | | | | | |
| Farmer | | | | | |
| Trader | | | | | |
| Service sector employee | | | | | |
| Asha/Anganwadi workers | | | | | |
| Teacher | | | | | |
| Government servants | | | | | |
| Self-employment (VLES and small scale | | | | | |

| Professions | Range of Response Level | | | | |
|-------------------------|-------------------------|-----------|------------------|-------------|--------------------|
| | Highly Confident | Confident | Not so confident | Unconfident | Highly Unconfident |
| entrepreneurs) | | | | | |
| Others | | | | | |
| House wife's | | | | | |
| Private sector employee | | | | | |
| Wage labor's | | | | | |

T-test paired samples

In the study, T- test paired samples have been performed for various zones to test the variation in the average level of confidence in using digital devices after training between male and female.

Following hypotheses have formulated for this purpose:

Null Hypothesis: there exists no significant difference in the average level of confidence in using digital devices after training between male and female

Alternative Hypothesis: there exists significant difference in the average level of confidence in using digital devices after training between male and female.

To perform this test, all the six zones have been shown in a single table:

Table – 191: Zone-wise Representation of Male and Female

| Zone | Male (Im_{confi})(avg) | Female (Im_{confi})(avg) |
|-------------|--|--|
| North | 1.626 | 1.654 |
| South | 1.6164 | 1.6152 |
| East | 1.6337 | 1.6336 |
| West | 1.628 | 1.6249 |
| Central | 1.65 | 1.651 |
| North-East | 1.6107 | 1.6107 |

Table 192: t-Test: Paired Two Sample for Means

t-Test: Paired Two Sample for Means

| | <i>Male</i> | <i>Female</i> |
|------------------------------|-------------|--------------------|
| Mean | 1.627467 | 1.631567 |
| Variance | 0.000191 | 0.000327 |
| Observations | 6 | 6 |
| Pearson Correlation | 0.757798 | |
| Hypothesized Mean Difference | 0 | |
| Df | 5 | |
| t Stat | -0.85171 | |
| P(T<=t) one-tail | 0.216633 | |
| t Critical one-tail | 2.015048 | |
| Male Sd=0.013803 | | Female Sd=0.018071 |

In the above table, t-value is less than t-critical value ($-0.85171 < 2.0150$) which explains that null hypothesis has to be accepted. Hence, It means that there is no significant difference in the average level of confidence in using digital devices after training between male and female.

V. Challenges Faced

This study also carried a few challenges that were faced by the team during the process of data collection and analysis:

Since many of the questions had been designed in a Likert scale format, difficulties had been faced in interpreting the responses received in the specified format.

During the data collection over phone, it was observed that the respondents need to rely on memory. In cases where the respondent had attended the training quite a long time back, such recall of information can introduce an error.

A duplicity/error in phone numbers was observed for the data of the respondents. As a result, in some cases it was not possible to reach out to the actual respondent instead the data was collected from alternate/supplemented source(s). This may be attributed to (1) lack of penetration of mobile to the rural masses, (2) social barrier in terms of sharing the phone number by the women respondent etc.

In few cases, data was collected from the concerned Village Level Entrepreneur (VLE) as it was difficult to get hold of the actual respondent. However, in some cases, the CIPS investigators experienced reluctance in terms of getting the data from the VLE.

Impact Assessment Study of DISHA

Language barrier was a serious concern while collecting the data especially for the respondents belonging to Tamil Nadu, Kerala, Karnataka and parts of North-East. However, the investigators managed with the local language and collected the data.

As a major part of the respondents were student, it was very difficult to get hold of them during the office timings. To deal with this problem, the team of investigators went beyond their normal working hours and collected the data.

As an Aadhaar Card was made mandatory for a beneficiary to give the exam and get the certificate after the training, the analysis made in our study was limited only to the certified candidates. It was a challenge in the sense that our investigators were compelled to ask whether a candidate obtained certificate or not.

VI. A Way Forward

An online portal can be developed which is to be used by the VLEs for updating the information related to the training programme in regular intervals. This could also serve as a platform where the VLEs interact among themselves, share ideas and subsequently report to the concerned authority if there are any discrepancies. The officials could track the performance of a particular VLE on real time basis and suggest improvements during the course of programme. This would impart accountability and transparency into the system.

CIPS could act as a Mentor Agency to CSC e-Governance Services India Ltd in developing an online portal and subsequently validating the information shared by the VLEs.

As the VLE also manages the Common Service Centre which delivers basic public services in his/her locality, he could be made in-charge to ensure an Aadhaar Card for the beneficiary prior to the training. The process of obtaining the Aadhaar Card shall be initiated by the VLE by identifying the list of beneficiaries during the time of the commencement of the training programme. This also helps the penetration of Aadhaar system into the rural masses and enables them to have a unique identity for themselves in availing various services.

The respondents could be divided into several groups based on their readiness or desire to accept and absorb technology. The citizens can be placed on a scale ranging from the adept and the enthusiastic at one end to the sceptical, the hesitant and those who resist at the other.

Impact Assessment Study of DISHA

An initial assessment or survey could be done to get the base data based on which govt. policies could be framed to handle each group in an effective manner. This could serve as a baseline survey, and can be of significant use to both the State and non-State actors. This data could be highly reliable in the sense that specific interventions addressing various groups could be designed and the policy decisions could become well informed. Also, as the govt. couldn't reach everyone, corporate sector could be made as a partner in this endeavor.

Since each state has its own peculiarity and needs to be handled accordingly, such targeted approach would make the training programme more efficient. Few of them are as follows:

For school students: a full-on approach, conscious effort to bring even those who resist technology into the fold. It would be worth it as the student has his life ahead of him.

For college students: Use those adept as part of training others, including those who resist;

Among the 30 plus age-group pick out those who are keen to learn, give them the honour of being the pioneers, train them and make them the trainers for the neighbourhood, friends and family.

For the 50 plus, leave out those who have no interest. For their day-to-day needs like banking, etc. let there be identified list of technology helpers whose services are available through the CSC.

CIPS would also propose to design a feedback module on the overall training (this could be a feedback form in line with the questionnaire prepared- Please refer the annexure). This feedback module could be made (mandatory) a part of the assessment that a candidate gives to obtain his certificate.

Annexure - 3: Work Order

Date 24/11/2016

CSC e-Governance Services India Limited
Electronics Niketan, 3rd Floor Delhi
6 CGO Complex, Lodhi Road
New Delhi - 110003 Tel: 011 24301349

Ref. No.: NDLM/IA/004

Subject: Placement of Work Order for Impact Assessment Study of the Digital Saksharta Abhiyan

Dear Dr. Nivedita Haran,

Refer to the proposal submitted by you via email, dated 24th November 2016, Ref. No. CIPS/Dir./CSC/16 and subsequent revisions thereafter, for Impact Assessment Study of the NDLM/DISHA.

1. We are pleased to inform you that based on the recommendations of the review committee; your proposal has been accepted. The Scope of Work is enclosed at Annexure-1. The cost of Impact Assessment is fixed at Rs. **18,42,500** (Service Tax extra as applicable).
2. You are requested to submit the final study report within three months of receiving this work order.

Yours sincerely

(Rishikesh Patankar)
HOO-Education

To

Dr. Nivedita P. Haran *L.A.S. (Retd.)*
College Park Campus of ASCI,
Road No.3, Banjara Hills,
Hyderabad-500034
Telangana

ANNEXURE-1: BROAD SCOPE OF WORK

1. **Study Objective:** The objective of this study is to assess the impact of DISHA training program and recommend improvements, suggestions and best practices.
 2. **Methodology:** The proposed sample size is 50,000. The detailed methodology adopted may also be submitted in the report.
 3. Data collection shall be the responsibility of Centre for Innovations in Public Systems (CIPS), Hyderabad
 4. The data should be presented in descriptive statistics. Where ever applicable, advanced statistics [Tools like SPSS, SAS] should be used.
 5. The study shall be conducted independently through CIPS team and must have a neutral stand point resulting in unbiased findings.
 6. CSCSPV shall provide the data of candidates at the beginning of the study. At the end of each month, a descriptive report should be submitted to CSCSPV. After three months, a final comprehensive report should be provided. The report is expected to enlist various positive as well as negative factors, and provide pragmatic suggestions for future phases of this programme.
 7. **Payment terms**
 - a. 30% of the amount after submission of the questionnaire.
 - b. 30% of the amount after submission of monthly reports of first two months.
 - c. 40% of the amount after submission of the final report.
 8. The payment will be released on the receipt of Invoice and approval from the CSC e-Governance Services India Limited.
-
